UNIVERSITY OF HAWAII

Journal of Molecular Biology

Editor-in-Chief
Peter Wright
Department of Molecular Biology, The Scripps Research Institute
10666 N. Torrey Pines Road, La Jolla, CA 92037, U.S.A.

Executive Editor
Jon Karn
MRC Laboratory of Molecular Biology
Hills Road, Cambridge CB2 2QH, U.K.

Founding Editor
Sir John Kendrew

Consulting Editor
Sydney Brenner

Editors

Alan R. Fersht, University Chemical Laboratory, Cambridge University, Lensfield Road, Cambridge CB2 1EW, U.K.
Max Gottesman, Institute of Cancer Research, College of Physicians & Surgeons of Columbia University, 701 W. 168th Street, New York, NY 10032, U.S.A.
Peter von Hippel, Institute of Molecular Biology, University of Oregon, Eugene, OR 97403–1229, U.S.A.
Robert Huber, Max-Planck-Institut für Biochemie, 82152 Martinsried bei München, Germany.
Aaron Klug, MRC Laboratory of Molecular Biology, Hills Road, Cambridge CB2 2QH, U.K.
Moshe Yaniv, Department of Biotechnology, Pasteur Institute, 25 rue de Dr Roux, 75724 Paris Cedex 15, France.

Associate Editors

Nam-Hai Chua, The Rockefeller University, 1230 York Avenue, New York, NY 10021, U.S.A.
Fred E. Cohen, Department of Pharmaceutical Chemistry, School of Pharmacy, University of California, San Francisco, CA 94143–0446, U.S.A.
David E. Draper, Department of Chemistry, Johns Hopkins University, 3400 North Charles Street, Baltimore, MD 21218, U.S.A.
Barry Holland, Institut de Génétique et Microbiologie, Bâtiment 409, Université de Paris XI, 91405 Orsay Cedex 05, France.
Barry Honig, Department of Biochemistry & Molecular Biophysics, College of Physicians & Surgeons of Columbia University, 630 West 168th Street, New York, NY 10032, U.S.A.
Vittorio Luzzati, Centre de Génétique Moléculaire, Centre National de la Recherche Scientifique, 91 Gif-sur-Yvette, France.
Brian W. Matthews, Institute of Molecular Biology, University of Oregon, Eugene, OR 97403–1229, U.S.A.
Jeffrey H. Miller, Department of Microbiology, University of California, 405 Hilgard Avenue, Los Angeles, CA 90024, U.S.A.
Michael F. Moody, School of Pharmacy, University of London, 29/39 Brunswick Square, London WC1N 1AX, U.K.
Steven Reed, Department of Molecular Biology, The Scripps Research Institute, 10666 North Torrey Pines Road, La Jolla, CA 92037, U.S.A.
Timothy Richmond, Institut für Molekularbiologie und Biophysik, Eidgenössische Technische Hochschule, Hönggerberg, CH 8093 Zurich, Switzerland.
Robert Schleif, Biology Department, Johns Hopkins University, Charles & 34th Streets, Baltimore, MD 21218, U.S.A.
Nat L. Sternberg, Du Pont Merck Pharmaceutical Company, 500 South Ridgeway Avenue, Glenholden, PA 19036, U.S.A.
Ian Wilson, The Scripps Research Institute, 10666 North Torrey Pines Road, La Jolla, CA 92037, U.S.A.
Keith R. Yamamoto, Department of Biochemistry and Biophysics, School of Medicine, University of California, San Francisco, CA 94143–0448, U.S.A.
Mitsuhiro Yanagida, Department of Biophysics, Faculty of Science, Kyoto University, Sakyo-Ku, Kyoto 606, Japan.

JOURNAL OF MOLECULAR BIOLOGY: ISSN 0022–2836. Volumes 235–244, 1994, is published weekly (except the last weeks in December; 50 issues in total) by Academic Press at 24–28 Oval Road, London NW1 7DX, England. Annual subscription price including postage: £1310 U.K. and Europe and U.S.$2430 elsewhere. Personal subscription rates are available from the publisher. Subscription orders should be sent to Academic Press, Foots Cray High Street, Sidcup, Kent DA14 5HP, U.K. (Tel: 081–300 3322). Send notices of changes of address to the publisher at least 6–8 weeks in advance, including both old and new addresses.

Buyers in Canada should add GST at the current rate of 7%.

Second class postage rate paid at Jamaica, NY 11431, U.S.A.

Air freight and mailing in the U.S.A. by Publications Expediting Inc., 200 Meacham Avenue, Elmont, NY 11003, U.S.A.

U.S.A. POSTMASTERS: send change of addresses to JOURNAL OF MOLECULAR BIOLOGY, c/o Publications Expediting, Inc., 200 Meacham Avenue, Elmont, NY 11003, U.S.A.
Printed in U.K., on acid free paper.

Listed in Biological Abstracts, Science Citation Index, Chemical Abstracts, Reference Update, EMBASE, Excerpta Medica, Current Contents.

Number 1, 5 January 1993

Communications

Spacing Requirements Between LexA Operator Half-sites can be Relaxed by Fusing the LexA DNA Binding Domain with some Alternative Dimerization Domains	**P. Oertel-Buchheit, T. Schmidt-Dörr, M. Granger-Schnarr and M. Schnarr**	1–7
General Antimutators are Improbable	**J. W. Drake**	8–13
Evidence Indicating that the Human Proteasome is a Complex Dimer	**F. Kopp, B. Dahlmann and K. B. Hendil**	14–19
Structure of *Sesbania* Mosaic Virus at 4·7 Å Resolution and Partial Sequence of the Coat Protein	**H. S. Subramanya, K. Gopinath, M. V. Nayudu, H. S. Savithri and M. R. N. Murthy**	20–25

Articles

Critical Role of the Acceptor Stem of $tRNAs^{Met}$ in their Aminoacylation by *Escherichia coli* Methionyl-tRNA Synthetase	**T. Meinnel, Y. Mechulam, C. Lazennec, S. Blanquet and G. Fayat**	26–36
Effects of a Single Base-pair Deletion in the Bacteriophage λ P_{RM} Promoter. Repression of P_{RM} by Repressor Bound at O_R2 and by RNA Polymerase Bound at P_R	**S. T. Woody, R. Shiaw-Ching Fong and G. N. Gussin**	37–51
Small Deletion and Insertion Mutations Induced by the Topoisomerase II Inhibitor Teniposide in CHO Cells and Comparison with Sites of Drug-stimulated DNA Cleavage *in Vitro*	**Y.-H. Han, M. J. Finley Austin, Y. Pommier and L. F. Povrik**	52–66
Strand-specific Binding to Duplex DNA Ends by the Subunits of the *Escherichia coli* RecBCD Enzyme	**S. Ganesan and G. R. Smith**	67–78
Domain Organization of the Subunit of the *Salmonella typhimurium* Flagellar Hook	**D. G. Morgan, R. M. Macnab, N. R. Francis and D. J. DeRosier**	79–84
Cloning and Overexpression of the Triosephosphate Isomerase Genes from Psychrophilic and Thermophilic Bacteria. Structural Comparison of the Predicted Protein Sequences	**F. Rentier-Delrue, S. C. Mande, S. Moyens, P. Terpstra, V. Mainfroid, K. Goraj, M. Lion, W. G. J. Hol and J. A. Martial**	85–93
Conformational and Nucleic Acid Binding Studies on the Synthetic Nucleocapsid Protein of HIV-1	**A. Surovoy, J. Dannull, K. Moelling and G. Jung**	94–104
Atomic Structures of the Human Immunophilin FKBP-12 Complexes with FK506 and Rapamycin	**G. D. Van Duyne, R. F. Standaert, P. A. Karplus, S. L. Schreiber and J. Clardy**	105–124
Conformational Filtering in Polypeptides and Proteins	**S. Vajda**	125–145
Molecular Shape of Vinculin in Aqueous Solution	**W. Eimer, M. Niermann, M. A. Eppe and B. M. Jockusch**	146–152
Crystal Structure of Glucose Oxidase from *Aspergillus niger* Refined at 2·3 Å Resolution	**H. J. Hecht, H. M. Kalisz, J. Hendle, R. D. Schmid and D. Schomburg**	153–172
Nuclear Magnetic Resonance Study of a Deoxyoligonucleotide Duplex Containing a Three Base Bulge	**F. Aboul-ela, A. I. H. Murchie, S. W. Homans and D. M. J. Lilley**	173–188
Crystal Structure of an Endochitinase from *Hordeum vulgare* L. Seeds	**P. J. Hart, A. F. Monzingo, M. P. Ready, S. R. Ernst and J. D. Robertus**	189–193

Fragment Ranking in Modelling of Protein Structure. Conformationally Constrained Environmental Amino Acid Substitution Tables	**C. M. Topham, A. McLeod, F. Eisenmenger, J. P. Overington, M. S. Johnson and T. L. Blundell**	194–220
Mutational Analysis of the Function of Gln115 in the *Eco*RI Restriction Endonuclease, a Critical Amino Acid for Recognition of the Inner Thymidine Residue in the Sequence -GAATTC- and for Coupling Specific DNA Binding to Catalysis	**A. Jeltsch, J. Alves, T. Oelgeschläger, H. Wolfes, G. Maass and A. Pingoud**	221–234

Crystallization Notes

Crystallization and Preliminary X-ray Crystallographic Analysis of α-Amylase from *Bacillus subtilis*	**C. Chang, K. K. Kim, K. Y. Hwang, M.-U. Choi and S. W. Suh**	235–238
Purification, Crystallization and Space Group Determination of DNA Repair Enzyme Exonuclease III from *Escherichia coli*	**C.-F. Kuo, D. E. McRee, R. P. Cunningham and J. A. Tainer**	239–242
Crystallization and Preliminary Crystallographic Characterization of the Copper-containing Amine Oxidase from Pea Seedlings	**V. Vignevich, D. M. Dooley, J. M. Guss, I. Harvey, M. A. McGuirl and H. C. Freeman**	243–245
Crystallization and Preliminary X-ray Analysis of the Catalytic Domain of Xylanase A from *Pseudomonas fluorescens* subspecies *cellulosa*	**R. W. Pickersgill, J. A. Jenkins, M. Scott, I. Connerton, G. P. Hazlewood and H. J. Gilbert**	246–248
Crystallization and Preliminary X-ray Analysis of Human Antithrombin III	**H. Schreuder, B. de Boer, S. Pronk, W. Hol, R. Dijkema, J. Mulders and H. Theunissen**	249–250
Crystallization of the C-Terminal Domain of Rabbit Serum Hemopexin	**H. M. Baker, G. E. Norris, W. T. Morgan, A. Smith and E. N. Baker**	251–252
Preliminary Crystallographic Analysis of Sweet Potato Beta Amylase	**R. Cudney and A. McPherson**	253–254
Crystallization and Preliminary X-ray Crystallographic Analysis of Probable Amylase/Protease Inhibitor-B from Rice Seeds	**K. Y. Hwang, K. K. Kim, K. Min, S. H. Eom, Y. G. Yu, S. Kim, R. M. Sweet and S. W. Suh**	255–257
Crystallization and Preliminary X-ray Diffraction Analysis of ScrY, a Specific Bacterial Outer Membrane Porin	**D. Forst, K. Schülein, T. Wacker, K. Diederichs, W. Kreutz, R. Benz and W. Welte**	258–262

Sequence Notes

Primary Structure of Three Distinct Isoabrins Determined by cDNA Sequencing. Conservation and Significance	**C.-H. Hung, M.-C. Lee, T.-C. Lee and J.-Y. Lin**	263–267
Isolation and Sequencing of *Escherichia coli* Gene *proP* Reveals Unusual Structural Features of the Osmoregulatory Proline/Betaine Transporter, ProP	**D. E. Culham, B. Lasby, A. G. Marangoni, J. L. Milner, B. A. Steer, R. W. van Nues and J. M. Wood**	268–276
Author Index		277

Number 2, 20 January 1993

Communications

Calcium Ions and the Structure of Muscle Actin Filament. An X-ray Diffraction Study	**D. Popp and Y. Maéda**	279–285
New Approach for Atomic Force Microscopy of Membrane Proteins. The Imaging of Cholera Toxin	**J. Yang, L. K. Tamm, T. W. Tillack and Z. Shao**	286–290

X-rays Destroy the Lamellar Structure of Model Membranes	**A.-c. Cheng, J. L. Hogan and M. Caffrey**	291–294
Predicted Secondary Structure for the Src Homology 3 Domain	**S. A. Benner, M. A. Cohen and D. Gerloff**	295–305
Articles		
Lrp, a Global Regulatory Protein of *Escherichia coli*, Binds Co-operatively to Multiple Sites and Activates Transcription of *ilvIH*	**Q. Wang and J. M. Calvo**	306–318
Cloning and Characterization of a Novel *Bacillus thuringiensis* Cytolytic Delta-Endotoxin	**P. A. Koni and D. J. Ellar**	319–327
Homologous Recognition and Triplex Formation Promoted by RecA Protein between Duplex Oligonucleotides and Single-stranded DNA	**B. J. Rao, S. K. Chiu and C. M. Radding**	328–343
Multiple Transitions to Non-B-DNA Structures Occur in the Distal Regulatory Region of the Rat Prolactin Gene	**M. P. Kladde, J. D'Cunha and J. Gorski**	344–367
Antitermination of Early Transcription in Phage HK022. Absence of a Phage-encoded Antitermination Factor	**J. Oberto, M. Clerget, M. Ditto, K. Cam and R. A. Weisberg**	368–381
Functional Sites in the 5′ Region of Human Immunodeficiency Virus Type 1 RNA Form Defined Structural Domains	**F. Baudin, R. Marquet, C. Isel, J.-L. Darlix, B. Ehresmann and C. Ehresmann**	382–397
Assembly of the Bacteriophage T4 Replication Machine Requires the Acidic Carboxy Terminus of Gene *32* Protein	**J. M. Hurley, S. A. Chervitz, T. C. Jarvis, B. S. Singer and L. Gold**	398–418
Patterns for Prediction of Hydration around Polar Residues in Proteins	**S. M. Roe and M. M. Teeter**	419–427
Accommodating Sequence Changes in β-Hairpins in Proteins	**B. L. Sibanda and J. M. Thornton**	428–447
Estimation and Use of Protein Backbone Angle Probabilities	**H. S. Kang, N. A. Kurochkina and B. Lee**	448–460
Structure of a Sarcoplasmic Calcium-binding Protein from Amphioxus Refined at 2·4 Å Resolution	**W. J. Cook, L. C. Jeffrey, J. A. Cox and S. Vijay-Kumar**	461–471
Left-handed Polyproline II Helices Commonly Occur in Globular Proteins	**A. A. Adzhubei and M. J. E. Sternberg**	472–493
Domain Closure in Adenylate Kinase. Joints on Either Side of Two Helices Close Like Neighboring Fingers	**M. Gerstein, G. Schulz and C. Chothia**	494–501
Protein Folding in the Absence of the Solvent Ordering Contribution to the Hydrophobic Interaction	**D. N. Woolfson, A. Cooper, M. M. Harding, D. H. Williams and P. A. Evans**	502–511
Physiological Relevance of the Overall ΔH of Oxygen Binding to Fetal Human Hemoglobin	**B. Giardina, R. Scatena, M. E. Clementi, L. Cerroni, M. Nuutinen, O. Brix, S. N. Sletten, M. Castagnola and S. G. Condò**	512–516
Cubic Phases of Lipid-containing Systems. A Translational Diffusion Study by Fluorescence Recovery after Photobleaching	**S. Cribier, A. Gulik, P. Fellmann, R. Vargas, P. F. Devaux and V. Luzzati**	517–525
Freeze-fracture Electron Microscope Study of Lipid Systems. The Cubic Phase of Space Group $Pm3n$	**H. Delacroix, T. Gulik-Krzywicki, P. Mariani and V. Luzzati**	526–539
Cubic Phases of Lipid-containing Systems. Elements of a Theory and Biological Connotations	**V. Luzzati, R. Vargas, P. Mariani, A. Gulik and H. Delacroix**	540–551

Crystallization Notes

Crystallization of Pancreatic Procolipase and of its Complex with Pancreatic Lipase — **H. van Tilbeurgh, Y. Gargouri, C. Dezan, M.-P. Egloff, M.-P. Nesa, N. Ruganie, L. Sarda, R. Verger and C. Cambillau** — 552–554

Crystallization and Preliminary Crystallographic Analysis of a TNF-β–55 kDa TNF Receptor Complex — **A. D'Arcy, D. W. Banner, W. Janes, F. K. Winkler, H. Loetscher, H.-J. Schönfeld, M. Zulauf, R. Gentz and W. Lesslauer** — 555–557

Crystallization and Preliminary X-ray Studies of the Basic Lectin from Winged Bean (*Psophocarpus tetragonolobus*) — **R. Sankaranarayanan, K. D. Puri, V. Ganesh, R. Banerjee, A. Surolia and M. Vijayan** — 558–560

Crystallization and Preliminary X-ray Analysis of the β-Galactosidase from the Extreme Thermophilic Archaebacterium *Sulfolobus solfataricus* — **L. H. Pearl, A. M. Hemmings, R. Nucci and M. Rossi** — 561–563

Crystallization and Preliminary X-ray Diffraction Studies of β-Cryptogein, a Toxic Elicitin Secreted by the Phytopathogenic Fungus *Phytophthora cryptogea* — **J.-P. Guilloteau, C. Nespoulous, J.-C. Huet, F. Beauvais, J.-C. Pernollet and S. Brunie** — 564–565

Crystallographic Characterization of a PHO4–DNA Complex — **T. Hakoshima, Y. Teranishi, T. Ohira, K. Suzuki, M. Shimizu, M. Shirakawa, Y. Kyogoku, N. Ogawa and Y. Oshima** — 566–569

Sequence Note

Nucleotide Sequence and Characterization of *Rhizobium meliloti* Nodulation Competitiveness Genes *nfe* — **M. J. Soto, A. Zorzano, J. Mercado-Blanco, V. Lepek, J. Olivares and N. Toro** — 570–576

Author Index — 577–578

Number 3, 5 February 1993

Communications

Two-dimensional Crystals of the Molecular Chaperone GroEL Reveal Structural Plasticity — **R. Zahn, J. R. Harris, G. Pfeifer, A. Plückthun and W. Baumeister** — 579–584

Metal-induced Conformational Changes in Transferrins — **J. G. Grossmann, M. Neu, R. W. Evans, P. F. Lindley, H. Appel and S. S. Hasnain** — 585–590

Molten Globule of Cytochrome *c* Studied by Small Angle X-ray Scattering — **M. Kataoka, Y. Hagihara, K. Mihara and Y. Goto** — 591–596

Conformation of Complementarity Determining Region L1 Loop in Murine IgG λ Light Chain Extends the Repertoire of Canonical Forms — **S. Wu and M. Cygler** — 597–601

Non-random Distribution of Amino Acids in the Transmembrane Segments of Human Type I Single Span Membrane Proteins — **C. Landolt-Marticorena, K. A. Williams, C. M. Deber and R. A. F. Reithmeier** — 602–608

Articles

Ribosome Initiation Complex Formation with the Pseudoknotted α Operon Messenger RNA — **G. Spedding, T. C. Gluick and D. E. Draper** — 609–622

Negative Supercoiling and Nucleosome Cores. I. The Effect of Negative Supercoiling on the Efficiency of Nucleosome Core Formation *in Vitro* — **H.-G. Patterton and C. von Holt** — 623–636

Negative Supercoiling and Nucleosome Cores. II. The Effect of Negative Supercoiling on the Positioning of Nucleosome Cores *in Vitro*	**H.-G. Patterton and C. von Holt**	637–655
Co-existing Structures of an mRNA Stability Determinant. The 5′ Region of the *Escherichia coli* and *Serratia marcescens ompA* mRNA	**V. Rosenbaum, T. Klahn, U. Lundberg, E. Holmgren, A. von Gabain and D. Riesner**	656–670
Role of DNA–Protein Interactions in Bacteriophage ΦX174 DNA Injection	**L. L. Ilag, J. K. Tuech, L. A. Beisner, R. A. Sumrada and N. L. Incardona**	671–684
Requirements of a Group I Intron for Reactions at the 3′ Splice Site	**G. van der Horst and T. Inoue**	685–694
Solution Structure of a Variant of Human Pancreatic Secretory Trypsin Inhibitor Determined by Nuclear Magnetic Resonance Spectroscopy	**W. Klaus and D. Schomburg**	695–706
Identification of Tertiary Structure Resemblance in Proteins Using a Maximal Common Subgraph Isomorphism Algorithm	**H. M. Grindley, P. J. Artymiuk, D. W. Rice and P. Willett**	707–721
High-resolution Three-dimensional Structure of Ribonuclease A in Solution by Nuclear Magnetic Resonance Spectroscopy	**J. Santoro, C. González, M. Bruix, J. L. Neira, J. L. Nieto, J. Herranz and M. Rico**	722–734
Refined Solution Structures of the *Escherichia coli trp* Holo- and Aporepressor	**D. Zhao, C. H. Arrowsmith, X. Jia and O. Jardetzky**	735–746
Similar Hydrophobic Replacements of Leu99 and Phe153 within the Core of T4 Lysozyme Have Different Structural and Thermodynamic Consequences	**A. E. Eriksson, W. A. Baase and B. W. Matthews**	747–769
Functional Interactions among the His40, Glu58 and His92 Catalysts of Ribonuclease T_1 as Studied by Double and Triple Mutants	**J. Steyaert and L. Wyns**	770–781
Crystallization Notes		
Crystallization and Preliminary X-ray Analysis of an NAD^+-dependent Alcohol Dehydrogenase from the Extreme Thermophilic Archaebacterium *Sulfolobus solfataricus*	**L. H. Pearl, D. Demasi, A. M. Hemmings, F. Sica, L. Mazzarella, C. A. Raia, S. D'Auria and M. Rossi**	782–784
Preliminary Investigation of Crystals of Lipase I from *Rhizopus niveus*	**M. Kohno, W. Kugimiya, Y. Hashimoto and Y. Morita**	785–786
Crystallization of F_1-ATPase from Bovine Heart Mitochondria	**R. Lutter, J. P. Abrahams, M. J. van Raaij, R. J. Todd, T. Lundqvist, S. K. Buchanan, A. G. W. Leslie and J. E. Walker**	787–790
Crystallization and Preliminary Crystallographic Analysis of the Cyanogenic β-Glucosidase from the White Clover *Trifolium repens* L.	**S. P. Tolley, T. E. Barrett, C. G. Suresh and M. A. Hughes**	791–793
Crystallization and Preliminary X-ray Analysis of the Periplasmic Fragment of CyoA– a Subunit of the *Escherichia coli* Cytochrome *o* Complex	**J. van der Oost, A. Musacchio, R. A. Pauptit, T. A. Ceska, R. K. Wierenga and M. Saraste**	794–796
Sequence Note		
Characterization of a Multigene Family Encoding an Exopolygalacturonase in Maize	**A. Barakate, W. Martin, F. Quigley and R. Mache**	797–801
Author Index		803–804

Number 4, 20 February 1993

Communications

Hierarchy of Base-pair Preference in the Binding Domain of the Bacteriophage T7 Promoter	**G. A. Diaz, C. A. Raskin and W. T. McAllister**	805–811
Crossed-Stranded DNA Structures for Investigating the Molecular Dynamics of the Holliday Junction	**R. D. Johnson and L. S. Symington**	812–820
Specificity of the Mnt Protein. Independent Effects of Mutations at Different Positions in the Operator	**G. D. Stormo, S. Strobl, M. Yoshioka and J. S. Lee**	821–826
Structure of Nucleosomal DNA at High Salt Concentration as Probed by Hydroxyl Radical	**H. L. Puhl and M. J. Behe**	827–832

Articles

Significant Dispersed Recurrent DNA Sequences in the *Escherichia coli* Genome. Several New Groups	**B. E. Blaisdell, K. E. Rudd, A. Matin and S. Karlin**	833–848
Duck Lactate Dehydrogenase B/ε-Crystallin Gene. Lens Recruitment of a GC-promoter	**H. J. Kraft, W. Hendriks, W. W. de Jong, N. H. Lubsen and J. G. G. Schoenmakers**	849–859
Quantitative Model of Col E1 Plasmid Copy Number Control	**V. Brendel and A. S. Perelson**	860–872
Mammalian Heterogeneous Ribonucleoprotein A1 and its Constituent Domains. Nucleic Acid Interaction, Structural Stability and Self-association	**J. R. Casas-Finet, J. D. Smith, Jr, A. Kumar, J. G. Kim, S. H. Wilson and R. L. Karpel**	873–889
The Gut Esterase Gene (*ges-1*) from the Nematodes *Caenorhabditis elegans* and *Caenorhabditis briggsae*	**B. P. Kennedy, E. J. Aamodt, F. L. Allen, M. A. Chung, M. F. P. Heschl and J. D. McGhee**	890–908
Nuclear Control of the Messenger RNA Expression for Mitochondrial ATPase Subunit 9 in a New Yeast Mutant	**K. Ziaja, G. Michaelis and T. Lisowsky**	909–916
On the Location of Histones H1 and H5 in the Chromatin Fiber. Studies with Immobilized Trypsin and Chymotrypsin	**S. H. Leuba, J. Zlatanova and K. van Holde**	917–929
Structure of Hen Lysozyme in Solution	**L. J. Smith, M. J. Sutcliffe, C. Redfield and C. M. Dobson**	930–944
Refined 1·8 Å X-ray Crystal Structure of Astacin, a Zinc-endopeptidase from the Crayfish *Astacus astacus* L. Structure Determination, Refinement, Molecular Structure and Comparison with Thermolysin	**F. X. Gomis-Rüth, W. Stöcker, R. Huber, R. Zwilling and W. Bode**	945–968
X-ray Structures of the Antigen-binding Domains from Three Variants of Humanized anti-p185^{HER2} Antibody 4D5 and Comparison with Molecular Modeling	**C. Eigenbrot, M. Randal, L. Presta, P. Carter and A. A. Kossiakoff**	969–995
Modeling Side-chain Conformation for Homologous Proteins Using an Energy-based Rotamer Search	**C. Wilson, L. M. Gregoret and D. A. Agard**	996–1006
X-ray Analysis and Spectroscopic Characterization of M121Q Azurin. A Copper Site Model for Stellacyanin	**A. Romero, C. W. G. Hoitink, H. Nar, R. Huber, A. Messerschmidt and G. W. Canters**	1007–1021

Refined 1·6 Å Resolution Crystal Structure of the Complex Formed between Porcine β-Trypsin and MCTI-A, a Trypsin Inhibitor of the Squash Family. Detailed Comparison with Bovine β-Trypsin and Its Complex	**Q. Huang, S. Liu and Y. Tang**	1022–1036
Three-dimensional Structure of the Lipoyl Domain from *Bacillus stearothermophilus* Pyruvate Dehydrogenase Multienzyme Complex	**F. Dardel, A. L. Davis, E. D. Laue and R. N. Perham**	1037–1048
Modeling the Three-dimensional Structure of RNA Using Discrete Nucleotide Conformational Sets	**D. Gautheret, F. Major and R. Cedergren**	1049–1064
Empirical and Structural Models for Insertions and Deletions in the Divergent Evolution of Proteins	**S. A. Benner, M. A. Cohen and G. H. Gonnet**	1065–1082
Three-dimensional Structure of the Glutathione Synthetase from *Escherichia coli* B at 2·0 Å Resolution	**H. Yamaguchi, H. Kato, Y. Hata, T. Nishioka, A. Kimura, J. Oda and Y. Katsube**	1083–1100
Nicotinic Acetylcholine Receptor at 9 Å Resolution	**N. Unwin**	1101–1124
Partially Folded Conformation of the (30-51) Intermediate in the Disulphide Folding Pathway of Bovine Pancreatic Trypsin Inhibitor. ^{1}H and ^{15}N Resonance Assignments and Determination of Backbone Dynamics from ^{15}N Relaxation Measurements	**C. P. M. van Mierlo, N. J. Darby, J. Keeler, D. Neuhaus and T. E. Creighton**	1125–1146
Crystallization Notes		
Crystals of Phospholipase A_2 Inhibitor. The Non-toxic Component of Vipoxin from the Venom of Bulgarian Viper (*Vipera ammodytes*)	**Y. Devedjiev, B. Atanasov, I. Mancheva and B. Aleksiev**	1147–1149
Crystallization and Preliminary X-ray Diffraction Studies of Recombinant Human Interleukin-5	**A. M. Hassell, T. N. C. Wells, P. Graber, A. E. I. Proudfoot, R. J. Anderegg, W. Burkhart, S. R. Jordan and M. V. Milburn**	1150–1152
Crystallization and Preliminary Crystallographic Data for Formyltetrahydrofolate Synthetase from *Clostridium thermoaceticum*	**K. Lewinski, Y. Hui, C. G. Jakob, C. R. Lovell and L. Lebioda**	1153–1156
Crystallization and Preliminary X-ray Crystallographic Analysis of the Protease Inhibitor Ecotin	**D. H. Shin, K. Y. Hwang, K. K. Kim, H. R. Lee, C. S. Lee, C. H. Chung and S. W. Suh**	1157–1158
Formation *in Vivo*, Purification and Crystallization of a Complex of the γ and ε Subunits of the F_0F_1-ATPase of *Escherichia coli*	**G. B. Cox, B. A. Cromer, J. M. Guss, I. Harvey, P. D. Jeffrey, R. G. Solomon and D. C. Webb**	1159–1162
Crystallization and Preliminary X-ray Analysis of a Truncated Tissue Metalloproteinase Inhibitor $\Delta_{128-194}$ TIMP-2	**S. Tolley, G. Murphy, M. O'Shea, R. Ward, A. Docherty, M. Cockett, A. Rawas and G. Davies**	1163–1164
Sequence Notes		
A Superfamily of ATPases with Diverse Functions Containing Either Classical or Deviant ATP-binding Motif	**E. V. Koonin**	1165–1174
Expression of the Human Placental Folate Receptor Transcript is Regulated in Human Tissues. Organization and Full Nucleotide Sequence of the Gene	**S. T. Page, W. C. Owen, K. Price and P. C. Elwood**	1175–1183
Author Index		1185–1186

List of Contents Volume 230

Number 1, 5 March 1993

Communications

On the Role of the P-site in Leftward Ribosome Frameshifting at a Hungry Codon	**K. Kolor, D. Lindsley and J. A. Gallant**	1–5
Base-pair Induced Shifts in the Tautomeric Equilibrium of a Modified DNA Base	**G. V. Fazakerley, Z. Gdaniec and L. C. Sowers**	6–10
Suppression of Loss-of-function Mutations in *Escherichia coli* Ribonuclease P RNA (M1 RNA) by a Specific Base-pair Disruption	**D. P. Morse and F. J. Schmidt**	11–14
Structural Patterns at Residue Positions 9, 18, 67 and 82 in the V_H Framework Regions of Human and Murine Immunoglobulins	**F. A. Saul and R. J. Poljak**	15–20
Molecular Basis of Allosteric Activation of Bacterial L-Lactate Dehydrogenase	**S. Iwata and T. Ohta**	21–27

Articles

The Bacteriophage 434 Right Operator. Roles of O_R1, O_R2 and O_R3	**F. D. Bushman**	28–40
Release Factor-dependent False Stops are Infrequent in *Escherichia coli*	**F. Jørgensen, F. M. Adamski, W. P. Tate and C. G. Kurland**	41–50
Unassigned or Nonsense Codons in *Micrococcus luteus*	**A. Kano, T. Ohama, R. Abe and S. Osawa**	51–56
Gene Organization, Primary Structure and RNA Processing Analysis of a Ribosomal RNA Operon in *Lactococcus lactis*	**C. Chiaruttini and M. Milet**	57–76
Human hnRNP Protein A1 Gene Expression. Structural and Functional Characterization of the Promoter	**G. Biamonti, M. T. Bassi, L. Cartegni, F. Mechta, M. Buvoli, F. Cobianchi and S. Riva**	77–89
High Affinity Binding of TAR RNA by the Human Immunodeficiency Virus Type-1 *tat* Protein Requires Base-pairs in the RNA Stem and Amino Acid Residues Flanking the Basic Region	**M. J. Churcher, C. Lamont, F. Hamy, C. Dingwall, S. M. Green, A. D. Lowe, P. J. G. Butler, M. J. Gait and J. Karn**	90–110
Hydrogen-bonding Contacts in the Major Groove are required for Human Immunodeficiency Virus Type-1 *tat* Protein Recognition of TAR RNA	**F. Hamy, U. Asseline, J. Grasby, S. Iwai, C. Pritchard, G. Slim, P. J. G. Butler, J. Karn and M. J. Gait**	111–123
Zinc Finger Mutations that Alter Domain Interactions in the Glucocorticoid Receptor	**E. Zandi, I. Galli, U. Döbbeling and S. Rusconi**	124–136
Analysis of Establishment Phase Replication of the Plasmid ColE1	**S. Merlin and B. Polisky**	137–150
Negative and Positive Regulators Modulate the Activity of a Silkmoth Chorion Gene during Choriogenesis	**N. A. Spoerel, H. T. Nguyen, S. Towne and F. C. Kafatos**	151–160
In Vivo Thermodynamic Analysis of Repression with and without Looping in *lac* Constructs. Estimates of Free and Local *lac* Repressor Concentrations and of Physical Properties of a Region of Supercoiled Plasmid DNA *in Vivo*	**S. M. Law, G. R. Bellomy, P. J. Schlax and M. T. Record, Jr**	161–173
Precise Deletions in Large Bacterial Genomes by Vector-mediated Excision (VEX). The *trfA* Gene of Promiscuous Plasmid RK2 is Essential for Replication in Several Gram-negative Hosts	**E. K. Ayres, V. J. Thomson, G. Merino, D. Balderes and D. H. Figurski**	174–185

Normal Mode Analysis of G-actin	**M. M. Tirion and D. ben-Avraham**	186–195
Projection Image of Smooth Muscle α-Actinin from Two-dimensional Crystals Formed on Positively Charged Lipid Layers	**K. A. Taylor and D. W. Taylor**	196–205
A Comparison of the Anti-rhinoviral Drug Binding Pocket in HRV14 and HRV1A	**K. H. Kim, P. Willingmann, Z. X. Gong, M. J. Kremer, M. S. Chapman, I. Minor, M. A. Oliveira, M. G. Rossmann, K. Andries, G. D. Diana, F. J. Dutko, M. A. McKinlay and D. C. Pevear**	206–225
Appendix: Correlation of pocket size and shape with antiviral activity	**G. D. Diana and J. P. Mallamo**	226–227
Refined Structure of Sindbis Virus Core Protein and Comparison with Other Chymotrypsin-like Serine Proteinase Structures	**L. Tong, G. Wengler and M. G. Rossmann**	228–247
Superhelical Path of the DNA in the Nucleoprotein Complex that Activates the Initiation of Phage ϕ29 DNA Replication	**M. Serrano, C. Gutiérrez, M. Salas and J. M. Hermoso**	248–259
X-ray Analyses of Aspartic Proteinases. V. Structure and Refinement at 2·0 Å Resolution of the Aspartic Proteinase from *Mucor pusillus*	**M. Newman, F. Watson, P. Roychowdhury, H. Jones, M. Badasso, A. Cleasby, S. P. Wood, I. J. Tickle and T. L. Blundell**	260–283
The (i, $i+4$) Phe–His Interaction Studied in an Alanine-based α-Helix	**K. M. Armstrong, R. Fairman and R. L. Baldwin**	284–291
Atomic Resolution (0·83 Å) Crystal Structure of the Hydrophobic Protein Crambin at 130 K	**M. M. Teeter, S. M. Roe and N. H. Heo**	292–311
Local Structure Due to an Aromatic–Amide Interaction Observed by ^{1}H-Nuclear Magnetic Resonance Spectroscopy in Peptides Related to the N Terminus of Bovine Pancreatic Trypsin Inhibitor	**J. Kemmink, C. P. M. van Mierlo, R. M. Scheek and T. E. Creighton**	312–322
The High-resolution Structure of the Peripheral Subunit-binding Domain of Dihydrolipoamide Acetyltransferase from the Pyruvate Dehydrogenase Multienzyme Complex of *Bacillus stearothermophilus*	**Y. N. Kalia, S. M. Brocklehurst, D. S. Hipps, E. Appella, K. Sakaguchi and R. N. Perham**	323–341

Crystallization Notes

Crystallization and Preliminary Crystallographic Analysis of *Streptomyces griseus* Aminopeptidase	**O. Almog, H. M. Greenblatt, A. Spungin, D. Ben-Meir, S. Blumberg and G. Shoham**	342–344
Crystallization and Preliminary X-ray Studies of Influenza A Virus Neuraminidase of Subtypes N5, N6, N8 and N9	**G. Taylor, E. Garman, R. Webster, T. Saito and G. Laver**	345–348
Crystallization of the Major Coat Protein of PRD1, a Bacteriophage with an Internal Membrane	**P. L. Stewart, S. Ghosh, D. H. Bamford and R. M. Burnett**	349–352
Crystal Parameters of an Alcohol Dehydrogenase from the Extreme Thermophile *Thermoanaerobium brockii*	**Z. Zhang, A. Djebli, M. Shoham, F. Frolow, M. Peretz and Y. Burstein**	353–355

Author Index 357

Number 2, 20 March 1993

Communications

Significance of Duplicated Flagellin Genes in *Campylobacter*	**R. A. Alm, P. Guerry and T. J. Trust**	359–363
Analysis of the Backbone Dynamics of Interleukin-8 by ^{15}N Relaxation Measurements	**B. L. Grasberger, A. M. Gronenborn and G. M. Clore**	364–372
Structural Deviations at CpG Provide a Plausible Explanation for the High Frequency of Mutation at This Site. Phosphorus Nuclear Magnetic Resonance and Circular Dichroism Studies	**S. El Antri, O. Mauffret, M. Monnot, E. Lescot, O. Convert and S. Fermandjian**	373–378
Electron Microscopy Visualization of Oligonucleotide Binding to Duplex DNA *via* Triplex Formation	**D. I. Cherny, V. A. Malkov, A. A. Volodin and M. D. Frank-Kamenetskii**	379–383
Imaging Frozen, Hydrated Acrosomal Bundle from *Limulus* Sperm at 7 Å Resolution with a 400 kV Electron Cryomicroscope	**M. F. Schmid, J. Jakana, P. Matsudaira and W. Chiu**	384–386
Comparison of the Dynamics of an Engineered Insulin Monomer and Dimer by Acid-Quenched Amide Proton Exchange. Non-local Stabilization of Interchain Hydrogen Bonds by Dimerization	**Q. X. Hua, W. Jia, B. H. Frank and M. A. Weiss**	387–394
Requirement for a Disulfide Bridge Near the Reactive Site of Protease Inhibitor SSI (*Streptomyces* Subtilisin Inhibitor) for its Inhibitory Action	**S. Kojima, I. Kumagai and K.-i. Miura**	395–399

Articles

Evidence for a Clustered Genomic Organization of FAX-Zinc Finger Protein Encoding Transcription Units in *Xenopus laevis*	**W. Nietfeld, S. Conrad, I. van Wijk, R. Giltay, T. Bouwmeester, W. Knöchel and T. Pieler**	400–412
Formation of a Single Base Mismatch Impedes Spontaneous DNA Branch Migration	**I. G. Panyutin and P. Hsieh**	413–424
Protein–DNA Interactions of the Mouse αA-Crystallin Control Regions. Differences Between Expressing and Non-expressing Cells	**M. Kantorow, A. Cvekl, C. M. Sax and J. Piatigorsky**	425–435
Keratin Intermediate Filament Structure. Crosslinking Studies Yield Quantitative Information on Molecular Dimensions and Mechanism of Assembly	**P. M. Steinert, L. N. Marekov, R. D. B. Fraser and D. A. D. Parry**	436–452
Phenyl-azide-mediated Photocrosslinking Analysis of Cro–DNA Interaction	**Y. Chen and R. H. Ebright**	453–460
Structural Studies of the Enveloped dsRNA Bacteriophage ϕ6 of *Pseudomonas syringae* by Raman Spectroscopy. I. The Virion and Its Membrane Envelope	**T. Li, D. H. Bamford, J. K. H. Bamford and G. J. Thomas, Jr**	461–472
Structural Studies of the Enveloped dsRNA Bacteriophage ϕ6 of *Pseudomonas syringae* by Raman Spectroscopy. II. Nucleocapsid Structure and Thermostability of the Virion, Nucleocapsid and Polymerase Complex	**J. K. H. Bamford, D. H. Bamford, T. Li and G. J. Thomas, Jr**	473–482
Growth-rate-dependent Accumulation of Twelve tRNA Species in *Escherichia coli*	**V. Emilsson, A. K. Näslund and C. G. Kurland**	483–491
Function of IHF in λ DNA Packaging. I. Identification of the Strong Binding Site for Integration Host Factor and the Locus for Intrinsic Bending in *cosB*	**W. Xin and M. Feiss**	492–504

Function of IHF in λ DNA Packaging. II. Effects of Mutations Altering the IHF Binding Site and the Intrinsic Bend in *cosB* on λ Development	**W. Xin, Z.-H. Cai and M. Feiss**	505–515
Refined Structure of the Pyruvoyl-dependent Histidine Decarboxylase from *Lactobacillus* 30a	**T. Gallagher, D. A. Rozwarski, S. R. Ernst and M. L. Hackert**	516–528
Crystal Structure of Ribonuclease H from *Thermus thermophilus* HB8 Refined at 2·8 Å Resolution	**K. Ishikawa, M. Okumura, K. Katayanagi, S. Kimura, S. Kanaya, H. Nakamura and K. Morikawa**	529–542
Backbone-dependent Rotamer Library for Proteins. Application to Side-chain Prediction	**R. L. Dunbrack Jr and M. Karplus**	543–574
1·8 Å Refined Structure of the Lipase from *Geotrichum candidum*	**J. D. Schrag and M. Cygler**	575–591
Rotamers: To be or not to be? An Analysis of Amino Acid Side-chain Conformations in Globular Proteins	**H. Schrauber, F. Eisenhaber and P. Argos**	592–612
Crystal Structure of the Trigonal Form of Human Plasma Retinol-binding Protein at 2·5 Å Resolution	**G. Zanotti, S. Ottonello, R. Berni and H. L. Monaco**	613–624
Solution Structure of Human Plasma Fibronectin under Different Solvent Conditions. Fluorescence Energy Transfer, Circular Dichroism and Light-scattering Studies	**C.-S. Lai, C. E. Wolff, D. Novello, L. Griffone, C. Cuniberti, F. Molina and M. Rocco**	625–640
What is the Natural Boundary of a Protein in Solution?	**M. Gerstein and R. M. Lynden-Bell**	641–650
Determination of the Rate Constants k_1 and k_2 of the Linderstrøm-Lang Model for Protein Amide Hydrogen Exchange. A Study of the Individual Amides in Hen Egg-white Lysozyme	**T. G. Pedersen, N. K. Thomsen, K. V. Andersen, J. C. Madsen and F. M. Poulsen**	651–660
Crystallization Notes		
Crystals of β-Xylanase from *Aspergillus oryzae*	**A. M. Golubev, A. Y. Kilimnik, K. N. Neustroev and R. W. Pickersgill**	661–663
Crystallization and Preliminary X-ray Analysis of a Thermophillic *Bacillus* Xylanase	**R. W. Pickersgill, P. Debeire, M. Debeire-Gosselin and J. A. Jenkins**	664–666
Preliminary Crystallographic Analysis of Coxsackievirus A9	**M. Smyth, J. Hall, E. Fry, D. Stuart, G. Stanway and T. Hyypiä**	667–669
Crystallization and Preliminary Crystallographic Analysis of a Tetrameric Isolectin from *Vicia villosa*, Specific for the Tn Antigen	**J.-L. Eiselé, D. Tello, E. Osinaga, A. Roseto and P. M. Alzari**	670–672
Crystallographic Characterization of Tetanus Toxin Fragment C	**M. D. Anderson, N. Fairweather, I. G. Charles, P. Emsley, N. W. Isaacs and G. MacDermott**	673–674
Crystallization of the Maltodextrin-binding Protein for Active Transport and Chemotaxis in Several Different Liganded and Mutant Forms	**L. Rodseth and F. A. Quiocho**	675–678
Preliminary Crystallographic Data for *Pneumocystis carinii* Dihydrofolate Reductase	**D. K. Stammers, C. Delves, S. Ballantine, E. Y. Jones, D. I. Stuart, A. Achari, P. K. Bryant and J. N. Champness**	679–680
Preliminary X-ray Study of Naproxen Esterase from *Bacillus subtilis*	**J. M. van der Laan, A. V. Teplyakov, A. A. Lammers and B. W. Dijkstra**	681–683

Sequence Notes

Prokaryotic Members of a New Family of Putative Helicases with Similarity to Transcription Activator SNF2 — **A.-B. Kolstø, P. Bork, K. Kvaløy, T. Lindback, A. Grønstadt, T. Kristensen and C. Sander** — 684–688

Sweet-tasting Protein Monellin is Related to the Cystatin Family of Thiol Proteinase Inhibitors — **A. G. Murzin** — 689–694

Erratum — 695

Author Index — 697

Number 3, 5 April 1993

Communications

Identification of a *cis*-acting Sequence within the *Pm* Promoter of the TOL Plasmid which Confers XylS-mediated Responsiveness to Substituted Benzoates — **B. Kessler, V. de Lorenzo and K. N. Timmis** — 699–703

Symmetrical Interactions between the Translational Operator of the *thrS* Gene and Dimeric Threonyl Transfer RNA Synthetase — **H. Bedouelle** — 704–708

Cloning of a Secretory Gelsolin from *Drosophila melanogaster* — **M. B. Heintzelman, S. A. Frankel, S. Artavanis-Tsakonas and M. S. Mooseker** — 709–716

Expression of Bacteriophage T4 Gene *25* is Regulated *via* RNA Secondary Structure in the Translational Initiation Region — **R. Nivinskas, R. Vaiškunaite and A. Raudonikiene** — 717–721

Re-refinement of the X-ray Crystal Structure of Bovine Lens Leucine Aminopeptidase Complexed with Bestatin — **H. Kim, S. K. Burley and W. N. Lipscomb** — 722–724

Functional Expression of the Uncomplexed Serum Retinol-binding Protein in *Escherichia coli*. Ligand Binding and Reversible Unfolding Characteristics — **H. N. Müller and A. Skerra** — 725–732

Double Strand Packing in Hemoglobin S Fibers — **I. Cretegny and S. J. Edelstein** — 733–738

Articles

Undiscriminating Codon Reading with Adenosine in the Wobble Position — **T. Borén, P. Elias, T. Samuelsson, C. Claesson, M. Barciszewska, C. W. Gehrke, K. C. Kuo and F. Lustig** — 739–749

Pathway of Activation by Magnesium Ions of Substrates for the Catalytic Subunit of RNase P from *Escherichia coli* — **J.-P. Perreault and S. Altman** — 750–756

Structure of the Maize Mitochondrial Replicon RNA *b* and Its Relationship with other Autonomously Replicating RNA Species — **M. Zhang and G. G. Brown** — 757–765

Conformation and Thermodynamics of DNA "Necks". Models for Three-arm Branch Formation in a Duplex — **M. Zhong and N. R. Kallenbach** — 766–778

Effects of Co-factor and Deoxycytidine Substituted Oligonucleotides upon Sequence-specific Interactions between *Msp*I DNA Methyltransferase and DNA — **K. Ford, C. Taylor, B. Connolly and D. P. Hornby** — 779–786

Structure of the Sequences Adjacent to the Centromeric Alphoid Satellite DNA Array on the Human Y Chromosome	K. F. Cooper, R. B. Fisher and C. Tyler-Smith	787 799
Structure of the Maltodextrin-uptake Locus of *Streptococcus pneumoniae*. Correlation to the *Escherichia coli* Maltose Regulon	A. Puyet and M. Espinosa	800 811
Molecular Profile of an Antibody Response to HIV-1 as Probed by Combinatorial Libraries	C. F. Barbas III, T. A. Collet, W. Amberg, P. Roben, J. M. Binley, D. Hoekstra, D. Cababa, T. M. Jones, R. A. Williamson, G. R. Pilkington, N. Haigwood, E. Cabezas, A. C. Satterthwait, I. Sanz and D. R. Burton	812 823
Reconstitution of Short-spaced Chromatin from the Histone Octamer and either HMG-14,17 or Histone H1	H. R. Drew	824 836
Separation and Characterization of Homo and Hetero-oligomers of the Intermediate Filament Proteins Desmin and Vimentin	P. Traub, S. Kühn and S. Grüb	837 856
Structure Determination of Antiviral Compound SCH 38057 Complexed with Human Rhinovirus 14	A. Zhang, R. G. Nanni, T. Li, G. F. Arnold, D. A. Oren, A. Jacob-Molina, R. L. Williams, G. Kamer, D. A. Rubenstein, Y. Li, E. Rozhon, S. Cox, P. Buontempo, J. O'Connell, J. Schwartz, G. Miller, B. Bauer, R. Versace, P. Pinto, A. Ganguly, V. Girijavallabhan and E. Arnold	857 867
Endonuclease VII of Phage T4 Triggers Mismatch Correction *in Vitro*	P. C. Solaro, K. Birkenkamp, P. Pfeiffer and B. Kemper	868 877
Interactions between Morpholinyl Anthracyclines and DNA. The Crystal Structure of a Morpholino Doxorubicin Bound to d(CGTACG)	M. Cirilli, F. Bachechi, G. Ughetto, F. P. Colonna and M. L. Capobianco	878 889
Refined Structure of *Escherichia coli* Heat-labile Enterotoxin, a Close Relative of Cholera Toxin	T. K. Sixma, K. H. Kalk, B. A. M. van Zanten, Z. Dauter, J. Kingma, B. Witholt and W. G. J. Hol	890 918
Crystal Structures of Rat Anionic Trypsin Complexed with the Protein Inhibitors APPI and BPTI	J. J. Perona, C. A. Tsu, C. S. Craik and R. J. Fletterick	919 933
Relocating a Negative Charge in the Binding Pocket of Trypsin	J. J. Perona, C. A. Tsu, M. E. McGrath, C. S. Craik and R. J. Fletterick	934 949
Structures of the Lectin IV of *Griffonia simplicifolia* and its Complex with the Lewis b Human Blood Group Determinant at 2·0 Å Resolution	L. T. J. Delbaere, M. Vandonselaar, L. Prasad, J. W. Quail, K. S. Wilson and Z. Dauter	950 965
Characterization of the Zinc-induced Structural Transition to *H-DNA at a $d(GA \cdot CT)_{22}$ Sequence	R. Beltrán, A. Martínez-Balbáz, J. Bernués, R. Bowater and F. Azorin	966 978
Crystal Structures of Ribonuclease F1 of *Fusarium moniliforme* in Its Free Form and in Complex with 2′GMP	D. G. Vassylyev, K. Katayanagi, K. Ishikawa, M. Tsujimoto-Hirano, M. Danno, A. Pähler, O. Matsumoto, M. Matsushima, H. Yoshida and K. Morikawa	979 996

X-ray Structures and Mechanistic Implications of Three Functional Derivatives of Ascorbate Oxidase from Zucchini. Reduced, Peroxide and Azide Forms	**A. Messerschmidt, H. Luecke and R. Huber**	997–1014
Complement-stabilized D-loop. RecA-catalyzed Stable Pairing of Linear DNA Molecules at Internal Sites	**V. K. Jayasena and B. H. Johnston**	1015–1024
Sequence-dependent DNA Structure. The Role of Base Stacking Interactions	**C. A. Hunter**	1025–1054
Fluorescence Energy Transfer Distance Measurements. The Hydrophobic Helical Hairpin of Colicin A in the Membrane Bound State	**J. H. Lakey, D. Duché, J.-M. González-Mañas, D. Baty and F. Pattus**	1055–1067
Molecular Basis for Methoxyamine-initiated Mutagenesis: ^{1}H Nuclear Magnetic Resonance Studies of Oligonucleotide Duplexes Containing Base-modified Cytosine Residues	**A. N. R. Nedderman, M. J. Stone, D. H. Williams, P. Kong Thoo Lin and D. M. Brown**	1068–1076

Crystallization Notes

Crystallization and Stoichiometry of Binding of a Complex between a Rat Intestinal Fc Receptor and Fc	**A. H. Huber, R. F. Kelley, L. N. Gastinel and P. J. Bjorkman**	1077–1083
Isolation, Crystallization and Preliminary Diffraction Analyses of Human Pancreatic α-Amylase	**D. Burk, Y. Wang, D. Dombroski, A. M. Berghuis, S. V. Evans, Y. Luo, S. G. Withers and G. D. Brayer**	1084–1085
Crystallization and Preliminary X-ray Diffraction Studies of a NADH Oxidase from *Thermus thermophilus* HB8	**H. Erdmann, H.-J. Hecht, H.-J. Park, M. Sprinzl, D. Schomburg and R. D. Schmid**	1086–1088
Crystallization of *Bacillus subtilis* Tryptophanyl-tRNA Synthetase	**P. Ala, H. Xue, L. Leung, Y. Q. Xue, J. T.-F. Wong and D. S. C. Yang**	1089–1090
Crystallization of a Deletion Mutant of the R-subunit of cAMP Dependent Protein Kinase	**Y. Su, S. S. Taylor, W. R. G. Dostmann, N. H. Xuong and K. I. Varughese**	1091–1093
Diffraction Grade Crystals of *Escherichia coli* Serine Hydroxymethyltransferase	**P. Stover, H. Kruschwitz, V. Schirch and H. T. Wright**	1094–1096
Crystallization of DsbA, an *Escherichia coli* Protein Required for Disulphide Bond Formation *in Vivo*	**J. L. Martin, G. Waksman, J. C. A. Bardwell, J. Beckwith and J. Kuriyan**	1097–1100

Author Index 1101–1102

Number 4, 20 April 1993

Communication

Tn*5053*, a Mercury Resistance Transposon with Integron's Ends	**G. Ya. Kholodii, O. Yurieva, O. L. Lomovskaya, Zh. M. Gorlenko, S.-Z. Mindlin and V. G. Nikiforov**	1103–1107

Articles

Highly Cooperative DNA Binding by the Coliphage HK022 Repressor	**N. G. Carlson and J. Little**	1108–1130
Plant bZIP Protein DNA Binding Specificity	**T. Izawa, R. Foster and N.-H. Chua**	1131–1144
RecQ DNA Helicase of *Escherichia coli*. Characterization of the Helix-unwinding Activity with Emphasis on the Effect of Single-stranded DNA-binding Protein	**K. Umezu and H. Nakayama**	1145–1150

α-Actinin Increases Actin Filament End Concentration by Inhibiting Annealing	**R. Columbo, I. DalleDonne and A. Milzani**	1151–1158
Site-directed Mutagenesis of the Yeast Mitochondrial ADP/ATP Translocator. Six Arginines and One Lysine are Essential	**D. R. Nelson, J. E. Lawson, M. Klingenberg and M. G. Douglas**	1159–1170
Function-based Mapping of the Yeast Mitochondrial ADP/ATP Translocator by Selection for Second Site Revertants	**D. R. Nelson and M. G. Douglas**	1171–1182
Refined Crystal Structure of the Catalytic Domain of Dihydrolipoyl Transacetylase (E2p) from *Azotobacter vinelandii* at 2·6 Å Resolution	**A. Mattevi, G. Obmolova, K. H. Kalk, A. H. Westphal, A. de Kok and W. G. J. Hol**	1183–1199
Three-dimensional Structure of Lipoamide Dehydrogenase from *Pseudomonas fluorescens* at 2·8 Å Resolution. Analysis of Redox and Thermostability Properties	**A. Mattevi, G. Obmolova, K. H. Kalk, W. J. H. van Berkel and W. G. J. Hol**	1200–1215
Refinement of Recombinant Oncomodulin at 1·30 Å Resolution	**F. R. Ahmed, D. R. Rose, S. V. Evans, M. E. Pippy and R. To**	1216–1224
Crystallographic Studies on a Family of Cellular Lipophilic Transport Proteins. Refinement of P2 Myelin Protein and the Structure Determination and Refinement of Cellular Retinol-binding Protein in Complex with All-*trans*-retinol	**S. W. Cowan, M. E. Newcomer and T. A. Jones**	1225–1246
Crystal Structures of Holo and Apo-cellular Retinol-binding Protein II	**N. S. Winter, J. M. Bratt and L. J. Banaszak**	1247–1259
Three-dimensional Structure of the Complex between Acyl-Coenzyme A Binding Protein and Palmitoyl-Coenzyme A	**B. B. Kragelund, K. V. Andersen, J. C. Madsen, J. Knudsen and F. M. Poulsen**	1260–1277
Energetics of a Stable Intramolecular DNA Triple Helix Formation	**J. Völker, D. Botes, G. G. Lindsey and H. H. Klump**	1278–1290
A Mutagenic Study of the Allosteric Linkage of His(HC3)146β in Haemoglobin	**D. T. b.-Shih, B. F. Luisi, G. Miyazaki, M. F. Perutz and K. Nagai**	1291–1296
The *in Vivo* Glycation of Diabetic Tendon Collagen Studied by Neutron Diffraction	**T. J. Wess, L. Wess, A. Miller, R. M. Lindsey and J. D. Baird**	1297–1303

Crystallization Notes

Primary Structure and Crystallization of Orotate Phosphoribosyltransferase from *Salmonella typhimurium*	**G. Scapin, J. C. Sacchettini, A. Dessen, M. Bhatia and C. Grubmeyer**	1304–1308
Crystals of Protein L30 from the 50 S Ribosomal Subunit of *Thermus thermophilus*. Preliminary Crystallographic Data	**O. S. Shikaeva, S. E. Sedelnikova, N. P. Fomenkova, S. V. Nikonov and M. B. Garber**	1309–1310
New Crystal Form of the Photosynthetic Reaction Centre from *Rhodobacter sphaeroides* of Improved Diffraction Quality	**S. K. Buchanan, G. Fritzsch, U. Ermler and H. Michel**	1311–1314
Crystallization and Preliminary X-ray Studies of a Protease from *Pseudomonas aeruginosa*	**S. Harada, A. Nagara, G. Kurisu and Y. Kai**	1315–1316
Purification and Crystallization of Human Cyclin-dependent Kinase 2	**J. Rosenblatt, H. De Bondt, J. Jancarik, D. O. Morgan and S.-H. Kim**	1317–1319

Erratum 1321

Communication

Genetic Evidence for the Interaction between Cluster I and Cluster III Rifampicin Resistant Mutations	**M. Singer, D. J. Jin, W. A. Walter and C. A. Gross**	1–5

Articles

Analysis of the Biased Distribution of Topoisomerase I Break Sites on Replicating Simian Virus 40 DNA	**L. H. Parker and J. J. Champoux**	6–18
Conformation of the Origin of P1 Plasmid Replication. Initiator Protein Induced Wrapping and Intrinsic Unstacking	**G. Mukhopadhyay and D. K. Chattoraj**	19–28
The LexA Repressor Binds Within the Deep Helical Groove of the Activated RecA Filament	**X. Yu and E. H. Egelman**	29–40
Analysis of Mutations Occurring at the Human *hprt* Locus	**N. F. Cariello and T. R. Skopek**	41–57
Mutation Ala2 → Ser Destabilizes Intersubunit Interactions in the Molecular Chaperone GroEL	**A. Horovitz, E. S. Bochkareva, O. Kovalenko and A. S. Girshovich**	58–64
Three-dimensional Transformation of Capsids Associated with Genome Packaging in a Bacterial Virus	**B. V. Venkataram Prasad, P. E. Prevelige, E. Marietta, R. O. Chen, D. Thomas, J. King and W. Chiu**	65–74
Genetic Algorithms for Protein Folding Simulations	**R. Unger and J. Moult**	75–81
Exploring the Limits of Precision and Accuracy of Protein Structures Determined by Nuclear Magnetic Resonance Spectroscopy	**G. M. Clore, M. A. Robien and A. M. Gronenborn**	82–102
Three-dimensional Structure of an Anti-steroid Fab′ and Progesterone–Fab′ Complex	**J. H. Arevalo, E. A. Stura, M. J. Taussig and I. A. Wilson**	103–118
Human Erythrocyte Band 3. Solubilization and Reconstitution into Two-dimensional Crystals	**M. Dolder, T. Walz, A. Hefti and A. Engel**	119–132

Crystallization Notes

Preliminary Crystallographic Analysis of a Fab Specific for the O-antigen of *Shigella flexneri* Cell Surface Lipopolysaccharide with and without Bound Saccharides	**M. N. Vyas, N. K. Vyas, P. J. Meikle, B. Sinnott, B. M. Pinto, D. R. Bundle and F. A. Quiocho**	133–136
Crystallization and Preliminary X-ray Analysis of Porcine Ribonuclease Inhibitor, a Protein with Leucine-rich Repeats	**B. Kobe and J. Deisenhofer**	137–140
Purification and Crystallization of Fumarase C from *Escherichia coli*	**T. M. Weaver, D. G. Levitt and L. J. Banaszak**	141–144
Crystallization and Preliminary X-ray Analysis of the Periplasmic Dipeptide Binding Protein from *Escherichia coli*	**P. W. Dunten, J. H. Harris, V. Feiz and S. L. Mowbray**	145–147

Sequence Notes

A Myosin-like Protein from a Higher Plant	**A. E. Knight and J. Kendrick-Jones**	148–154
Sequences of Sea Urchin Kinesin Light Chain Isoforms	**K. P. Wedaman, A. E. Knight, J. Kendrick-Jones and J. M. Scholey**	155–158

Communications

Phenotypic Suppression by Incorporation of an Alien Amino Acid	**B. Lemeignan, P. Sonigo and P. Marlière**	161–166
Missense Mutations in the *Bacillus subtilis gnt* Repressor that Diminish Operator Binding Ability	**K.-I. Yoshida, Y. Fujita and A. Sarai**	167–174
Template-directed and Template-free RNA Synthesis by Qβ Replicase	**C. K. Biebricher, M. Eigen and J. S. McCaskill**	175–179
Guanidine Hydrochloride-induced Folding of Proteins	**Y. Hagihara, S. Aimoto, A. L. Fink and Y. Goto**	180–184
Analysis of the Interactions of HIV1 Replication Primer $tRNA^{Lys,3}$ with Nucleocapsid Protein and Reverse Transcriptase	**C. Barat, O. Schatz, S. Le Grice and J.-L. Darlix**	185–190
Structural Differences between Wild-type NADP-dependent Glutathione Reductase from *Escherichia coli* and a Redesigned NAD-dependent Mutant	**P. R. E. Mittl, A. Berry, N. S. Scrutton, R. N. Perham and G. E. Schulz**	191–195

Articles

La Proteins from *Xenopus laevis*. cDNA Cloning and Developmental Expression	**D. Scherly, F. Stutz, N. Lin-Marq and S. G. Clarkson**	196–204
AraC Protein Can Activate Transcription from Only One Position and When Pointed in Only One Direction	**T. Reeder and R. Schleif**	205–218
Recognition Nucleotides of *Escherichia coli* $tRNA^{Leu}$ and Its Elements Facilitating Discrimination from $tRNA^{Ser}$ and $tRNA^{Tyr}$	**H. Asahara, H. Himeno, K. Tamura, T. Hasegawa, K. Watanabe and M. Shimizu**	219–229
The Influence of the Base-paired Flanking Region on Structure and Function of the Ferritin mRNA Iron Regulatory Element	**D. Dix, P.-N. Lin, A. R. McKenzie, W. E. Walden and E. C. Theil**	230–240
Herpes Simplex Virus 1 Single-strand DNA-binding Protein (ICP8) Will Promote Homologous Pairing and Strand Transfer	**C. Bortner, T. R. Hernandez, I. R. Lehman and J. Griffith**	241–250
Electron Microscopy of DNA Excision Repair Patches Produced by Human Cell Extracts	**E. E. Szymkowski, M. A. N. Hajibagheri and R. D. Wood**	251–260
Mutations that Affect Separate Functions of OmpR, the Phosphorylated Regulator of Porin Transcription in *Escherichia coli*	**F. D. Russo, J. M. Slauch and T. J. Silhavy**	261–273
Solution Structure of Selenocysteine-inserting $tRNA^{Sec}$ from *Escherichia coli*. Comparison with Canonical $tRNA^{Ser}$	**C. Baron, E. Westhof, A. Böck and R. Giegé**	274–292
Distortion of the DNA Double Helix by RAP1 at Silencers and Multiple Telomeric Binding Sites	**E. Gilson, M. Roberge, R. Giraldo, D. Rhodes and S. M. Gasser**	293–310
Ionic Interactions in the Coiled-coil Domain of Laminin Determine the Specificity of Chain Assembly	**K. Beck, T. W. Dixon, J. Engel and D. A. D. Parry**	311–323
Two Secretory Protein Genes in *Chironomus tentans* Have Arisen by Gene Duplication and Exhibit Different Developmental Expression Patterns	**J. Galli and L. Wieslander**	324–334
Requirement of Both Kinase and Phosphatase Activities of an *Escherichia coli* Receptor (Taz1) for Ligand-dependent Signal Transduction	**Y. Yang and M. Inouye**	335–342

Clustered Arginine Residues of Bacteriophage λ N Protein are Essential to Antitermination of Transcription, but Their Locale Cannot Compensate for *boxB* Loop Defects	**N. C. Franklin**	343–360
Studies of Bacteriophage P2 DNA Replication. The DNA Sequence of the *Cis*-acting Gene *A* and *ori* Region and Construction of a P2 Mini-chromosome	**Y. Liu, S. Saha and E. Haggård-Ljungquist**	361–374
Three-dimensional Structure of Satellite Tobacco Mosaic Virus at 2·9 Å Resolution	**S. B. Larson, S. Koszelak, J. Day, A. Greenwood, J. A. Dodds and A. McPherson**	375–391
Distribution of Solvent Molecules Around Apolar Side-chains in Protein Crystals	**J. Walshaw and J. M. Goodfellow**	392–414
Two-dimensional ^{1}H Nuclear Magnetic Resonance Studies of the Half-saturated $(Ca^{2+})_1$ State of Calbindin D_{9k}. Further Implications for the Molecular Basis of Cooperative Ca^{2+} binding	**G. Carlström and W. J. Chazin**	415–430
High Resolution Crystal Structure of the *A*-DNA Decamer d(CCCGGCCGGG). Novel Intermolecular Base-paired G $*$ (G·C) Triplets	**B. Ramakrishnan and M. Sundaralingam**	431–444
Refined Crystal Structure of Human Transforming Growth Factor β2 at 1·95 Å Resolution	**M. P. Schlunegger and M. G. Grütter**	445–458
On the pH Dependence of Protein Stability	**A.-S. Yang and B. Honig**	459–474
Sequence Dependence of the Free Energy of *B–Z* Junction Formation in Deoxyoligonucleotides	**R. D. Sheardy, D. Suh, R. Kurzinsky, M. J. Doktycz, A. S. Benight and J. B. Chaires**	475–488
tRNA-Guanine Transglycosylase from *Escherichia coli*. Overexpression, Purification and Quaternary Structure	**G. A. Garcia, K. A. Koch and S. Chong**	489–497
Crystallization Notes		
Crystallization and Preliminary X-ray Analysis of Vipoxin, a Complex between a Toxic Phospholipase A_2 and its Natural Polypeptide Inhibitor	**C. Betzel, M. Visanji, K. S. Wilson, N. Genov, I. Mancheva, B. Aleksiev and T. Singh**	498–500
Two-dimensional Crystallization of the Light-harvesting Complex from *Rhodospirillum rubrum*	**R. Ghosh, A. Hoenger, A. Hardmeyer, D. Mihailescu, R. Bachofen, A. Engel and J. P. Rosenbusch**	501–504
Crystallization of Porcine Liver Ribonuclease Inhibitor, a Member of the Family of Leucine-rich Repeats Containing Proteins	**U. Neumann, J. Hofsteenge, A. H. Arkema and B. W. Dijkstra**	505–508
Preliminary Analysis of Crystals of 4-Oxalocrotonate Tautomerase, an Enzyme Composed of Unusually Small Monomers	**R. C. Davenport and C. P. Whitman**	509–512
Purification, Circular Dichroism Analysis, Crystallization and Preliminary X-ray Diffraction Analysis of the F Plasmid CcdB Killer Protein	**J. Steyaert, L. Van Melderen, P. Bernard, M. H. D. Thi, R. Loris, L. Wyns and M. Couturier**	513–515
Sequence Notes		
Segment Substitutions in Alpha Satellite DNA. Unusual Structure of Human Chromosome 3-specific Alpha Satellite Repeat Unit	**I. A. Alexandrov, T. D. Mashkova, L. Y. Romanova, Y. B. Yurov and L. L. Kisselev**	516–520
Sequence and Structure of a New Coiled Coil Protein from a Microtubule Bundle in *Giardia*	**J. Marshall and D. V. Holberton**	521–530

Dense Cluster of Genes is Located at the Ecdysone-regulated 3C Puff of *Drosophila melanogaster* — **M. Furia, P. P. D'Avino, S. Crispi, D. Artiaco and L. C. Polito** — 531–538

The CUB Domain. A Widespread Module in Developmentally Regulated Proteins — **P. Bork and G. Beckmann** — 539–545

Author Index — 547–548

Number 3, 5 June 1993

Communications

The Spatial Structure of the Class II L-Fuculose-1-phosphate Aldolase from *Escherichia coli* — **M. K. Dreyer and G. E. Schulz** — 549–553

Asp Ligand Provides the Trigger for Closure of Transferrin Molecules. Direct Evidence from X-ray Scattering Studies of Site-specific Mutants of the N-Terminal Half-molecule of Human Transferrin — **J. G. Grossmann, A. B. Mason, R. C. Woodworth, M. Neu, P. F. Lindley and S. S. Hasnain** — 554–558

Articles

Self-splicing of a *Podospora anserina* Group IIA Intron *in Vitro*. Effects of 3′-Terminal Intron Alterations on Cleavage at the 5′ and 3′ Splice Site — **U. Schmidt, R. Sägebarth, C. Schmelzer and U. Stahl** — 559–568

Transcriptional Slippage During the Transcription Initiation Process at a Mutant *lac* Promoter *in Vivo* — **X. F. Xiong and W. S. Reznikoff** — 569–580

Coupling of rRNA Transcription and Ribosomal Assembly *in Vivo*. Formation of Active Ribosomal Subunits in *Escherichia coli* Requires Transcription of rRNA Genes by Host RNA Polymerase which Cannot be Replaced by Bacteriophage T7 RNA Polymerase — **B. T. U. Lewicki, T. Margus, J. Remme and K. H. Nierhaus** — 581–593

Identification of a Region within M1 RNA of *Escherichia coli* RNase P Important for the Location of the Cleavage Site on a Wild-type tRNA Precursor — **L. A. Kirsebom and S. G. Svärd** — 594–604

Biochemical Characterization of a Mutant recBCD Enzyme, the $recB^{2109}$ CD Enzyme, Which Lacks χ-Specific, but Not Non-specific, Nuclease Activity — **A. K. Eggleston and S. C. Kowalczykowski** — 605–620

The Mutant recBCD Enzyme, $recB^{2109}$ CD Enzyme, Has Helicase Activity but Does Not Promote Efficient Joint Molecule Formation *in Vitro* — **A. K. Eggleston and S. C. Kowalczykowski** — 621–633

DNA Tridimensional Context Affects the Reactivity of Eukaryotic DNA Topoisomerase I — **R. Perini, M. Caserta and E. Di Mauro** — 634–645

Genetic and Biochemical Analysis of the Integration Host Factor of *Escherichia coli* — **G. Mengeritsky, D. Goldenberg, I. Mendelson, H. Giladi and A. B. Oppenheim** — 646–657

Structural and Functional Requirements for the Chromatin Transition at the *PHO5* Promoter in *Saccharomyces cerevisiae* upon *PHO5* Activation — **K.-D. Fascher, J. Schmitz and W. Hörz** — 658–667

An X-ray Diffraction Study of Frog Skeletal Muscle During Shortening Near the Maximum Velocity — **N. Yagi, S. Takemori and M. Watanabe** — 668–677

Synthesis of Proteins in *Escherichia coli* is Limited by the Concentration of Free Ribosomes. Expression from Reporter Genes Does Not Always Reflect Functional mRNA Levels	**J. Vind, M. A. Sørensen, M. D. Rasmussen and S. Pedersen**	678–688
Protein–Protein Interactions During Filamentous Phage Assembly	**M. Russel**	689–697
Three-dimensional Structure of the Tetragonal Crystal Form of Egg-white Avidin in Its Functional Complex with Biotin at 2·7 Å Resolution	**L. Pugliese, A. Coda, M. Malcovati and M. Bolognesi**	698–710
High-resolution Solution Structure of Calcium-loaded Calbindin D_{9k}	**J. Kördel, N. J. Skelton, M. Akke and W. J. Chazin**	711–734
Alignment and Searching for Common Protein Folds Using a Data Bank of Structural Templates	**M. S. Johnson, J. P. Overington and T. L. Blundell**	735–752
Nuclear Magnetic Resonance Comparison of the Binding Sites of Mithramycin and Chromomycin on the Self-complementary Oligonucleotide $d(ACCCGGGT)_2$. Evidence that the Saccharide Chains Have a Role in Sequence Specificity	**M. A. Keniry, D. L. Banville, P. M. Simmonds and R. Shafer**	753–767
The Crystal Structure of the Trigonal Decamer C-G-A-T-C-G-^{6me}A-T-C-G: a *B*-DNA Helix with 10·6 Base-pairs Per Turn	**I. Baikalov, K. Grzeskowiak, K. Yanagi, J. Quintana and R. E. Dickerson**	768–784
Structure and Molecular Model Refinement of Pig Pancreatic α-Amylase at 2·1 Å Resolution	**M. Qian, R. Haser and F. Payan**	785–799
Nuclear Magnetic Resonance Solution Structure of the Pheromone Er-10 from the Ciliated Protozoan *Euplotes raikovi*	**L. R. Brown, S. Mronga, R. A. Bradshaw, C. Ortenzi, P. Luporini and K. Wüthrich**	800–816
Porin Conformation in the Absence of Calcium. Refined Structure at 2·5 Å Resolution	**M. S. Weiss and G. E. Schulz**	817–824
Empirical Scale of Side-chain Conformational Entropy in Protein Folding	**S. D. Pickett and M. J. E. Sternberg**	825–839
Configurational Distribution of Denatured Phosphoglycerate Kinase	**P. Calmettes, B. Roux, D. Durand, M. Desmadril and J. C. Smith**	840–848
A Method to Configure Protein Side-chains from the Main-chain Trace in Homology Modelling	**F. Eisenmenger, P. Argos and R. Abagyan**	849–860
Protein Structures from Distance Inequalities	**J. Bohr, H. Bohr, S. Brunak, R. M. J. Cotterill, H. Fredholm, B. Lautrup and S. B. Petersen**	861–869
The Crystal Structure of Tris-inhibited Phospholipase C from *Bacillus cereus* at 1·9 Å Resolution. The Nature of the Metal Ion in Site 2	**S. Hansen, L. K. Hansen and E. Hough**	870–876
Crystal Structure of Hydrophobic Protein from Soybean; a Member of a New Cysteine-rich Family	**F. Baud, E. Pebay-Peyroula, C. Cohen-Addad, S. Odani and M. S. Lehmann**	877–887
Common Ring Motifs in Proteins Involving Asparagine or Glutamine Amide Groups Hydrogen-bonded to Main-chain Atoms	**J.-Y. Le Questel, D. G. Morris, P. H. Maccallum, R. Poet and E. J. Milner-White**	888–896
Stability and Folding Kinetics of Ribonuclease T_1 are Strongly Altered by the Replacement of *Cis*-proline 39 with Alanine	**L. M. Mayr, O. Landt, U. Hahn and F. X. Schmid**	897–912
Kinetic Models for Unfolding and Refolding of Ribonuclease T_1 with Substitution of *Cis*-proline 39 by Alanine	**L. M. Mayr and F. X. Schmid**	913–926

Crystallization Notes

Crystals of the Phenylalanyl-tRNA Synthetase from *Thermus thermophilus* HB8 Complexed with $tRNA^{Phe}$ — **L. Reshetnikova, S. Khodyreva, O. Lavrik, V. Ankilova, F. Frolow and M. Safro** — 927–929

Preliminary Crystallographic Analysis of Bovine Enterovirus — **M. Smyth, E. Fry, D. Stuart, C. Lyons, E. Hoey and S. J. Martin** — 930–932

Crystallization of α-Galactosidase from *Trichoderma reesei* — **A. M. Golubev and K. N. Neustroev** — 933–934

Sequence Note

The 5′ Flanking Sequences of the Mouse P-cadherin Gene. Homologies to 5′ Sequences of the E-cadherin Gene and Identification of a First 215 Base-pair Intron — **M. L. M. Faraldo and A. Cano** — 935–941

Author Index — 943–944

Number 4, 20 June 1993

Communication

Redox Regulation of *in Vitro* DNA-binding Activity by the Homeodomain of the Isl-1 Protein — **I. Sánchez-García and T. H. Rabbitts** — 945–949

Articles

Factors Influencing the Repair of the Mutagenic Lesion O^6-methylguanine in DNA by Human O^6-methylguanine-DNA Methyltransferase — **L.-K. Liem, C. W. Wong, A. Lim and B. F. L. Li** — 950–959

Studies of the Hyperthermophile *Thermotoga maritima* by Random Sequencing of cDNA and Genomic Libraries. Identification and Sequencing of the *trpEG (D)* Operon — **C. W. Kim, P. Markiewicz, J. J. Lee, C. F. Schierle and J. H. Miller** — 960–981

Molecular Cloning and Expression of the Transformation Sensitive Epithelial Marker Stratifin. A Member of a Protein Family that has been Involved in the Protein Kinase C Signalling Pathway — **H. Leffers, P. Madsen, H. H. Rasmussen, B. Honoré, A. H. Andersen, E. Walbum, J. Vandekerckhove and J. E. Celis** — 982–998

Reversible Pressure Dissociation of R17 Bacteriophage. The Physical Individuality of Virus Particles — **A. T. Da Poian, A. C. Oliveira, L. P. Gaspar, J. L. Silva and G. Weber** — 999–1008

Solution Nuclear Magnetic Resonance Determination of Active Site Structure for a Paramagnetic Protein: Cyanomet *Aplysia* Myoglobin — **J. Qin, G. N. La Mar, F. Ascoli and M. Brunori** — 1009–1023

A DNA Dodecamer Containing an Adenine Tract Crystallizes in a Unique Lattice and Exhibits a New Bend — **A. D. DiGabriele and T. A. Steitz** — 1024–1039

Hydration of Proteins. A Comparison of Experimental Residence Times of Water Molecules Solvating the Bovine Pancreatic Trypsin Inhibitor with Theoretical Model Calculations — **R. M. Brunne, E. Liepinsh, G. Otting, K. Wüthrich and W. F. van Gunsteren** — 1040–1048

Main-chain Bond Lengths and Bond Angles in Protein Structures — **R. A. Laskowski, D. S. Moss and J. M. Thornton** — 1049–1067

Mapping of the Zinc Binding Domain of *Escherichia coli* Methionyl-tRNA Synthetase — **D. Fourmy, T. Meinnel, Y. Mechulam and S. Blanquet** — 1068–1077

Methionyl-tRNA Synthetase Zinc Binding Domain. Three-dimensional Structure and Homology with Rubredoxin and *gag* Retroviral Proteins	**D. Fourmy, F. Dardel and S. Blanquet**	1078–1089
Structural Polymorphism of Homopurine–Homopyrimidine Sequences at Neutral pH	**Y. Kohwi and T. Kohwi-Shigematsu**	1090–1101
Energetics of Heterodimer Formation Among Gramicidin Analogues with an NH_2-Terminal Addition or Deletion. Consequences of Missing a Residue at the Join in the Channel	**J. T. Durkin, L. L. Providence, R. E. Koeppe II and O. S. Andersen**	1102–1121

Crystallization Notes

Crystallization and Preliminary Crystallographic Analysis of *Escherichia coli* DNA Photolyase	**H.-W. Park, A. Sancar and J. Deisenhofer**	1122–1125
Crystallization and Preliminary X-ray Diffraction Studies of Theiler's Virus (GDVII strain)	**K. S. Toth, C. X. Zhang, H. L. Lipton and M. Luo**	1126–1129
Crystallization and Preliminary X-ray Data for the A-Isozyme of *O*-Acetylserine Sulfhydrylase from *Salmonella typhimurium*	**G. S. Jagannatha Rao, J. Mottonen, E. J. Goldsmith and P. F. Cook**	1130–1132
Crystals of Human Growth Hormone–Receptor Complexes. Extracellular Domains of the Growth Hormone and Prolactin Receptors and a Hormone Mutant Designed to Prevent Receptor Dimerization	**M. Ultsch and A. M. de Vos**	1133–1136
Crystallization and Preliminary Crystallographic Analysis of Antistasin, a Leech-derived Inhibitor of Blood Coagulation Factor Xa	**H. Schreuder, A. Arkema, B. de Boer, K. Kalk, R. Dijkema, J. Mulders, H. Theunissen and W. Hol**	1137–1138
Crystallization and Preliminary X-ray Investigation of Recombinant Simian Immunodeficiency Virus Proteinase	**A. F. Wilderspin and R. J. Sugrue**	1139–1142

Author Index 1143–1144

List of Contents Volume 232

Number 1, 5 July 1993

Communication

DNA Conformation Induced by the Bacteriophage T4 UvsX Protein Appears Identical to the Conformation Induced by the *Escherichia coli* RecA Protein	**X. Yu and E. H. Egelman**	1–4
Are the Molten Globule and the Unfolded States of Apo-α-Lactalbumin Enthalpically Equivalent?	**D. Xie, V. Bhakuni and E. Freire**	5–8
Crystal Structure of the Complex between Human Carbonic Anhydrase II and the Aromatic Inhibitor 1,2,4-Triazole	**S. Mangani and A. Liljas**	9–14
Production and Characterization of an Antibody Fv Fragment ^{15}N-Labeled in the V_L Domain Only	**V. Goldfarb, M. Wittekind, P. D. Jeffrey, L. Mueller and K. L. Constantine**	15–22

Articles

Activation of DNA Binding by the Monomeric Form of the P1 Replication Initiator RepA by Heat Shock Proteins DnaJ and DnaK	**S. DasGupta, G. Mukhopadhyay, P. P. Papp, M. S. Lewis and D. K. Chattoraj**	23–34

Nucleation of RNA Chain Formation by *Escherichia coli* DNA-dependent RNA Polymerase	**W. Metzger, P. Schickor, T. Meier, W. Werel and H. Heumann**	35–49
The Mechanism of Interaction of Filaggrin with Intermediate Filaments. The Ionic Zipper Hypothesis	**J. W. Mack, A. C. Steven and P. M. Steinert**	50–66
Glutamate at the Site of Phosphorylation of Nitrogen-regulatory Protein NTRC Mimics Aspartyl-Phosphate and Activates the Protein	**K. E. Klose, D. S. Weiss and S. Kustu**	67–78
MSS1, a Nuclear-encoded Mitochondrial GTPase Involved in the Expression of COX1 Subunit of Cytochrome *c* Oxidase	**E. Decoster, A. Vassal and G. Faye**	79–88
Translational Repression by the Bacteriophage T4 Gene *32* Protein Involves Specific Recognition of an RNA Pseudoknot Structure	**Y. Shamoo, A. Tam, W. H. Konigsberg and K. R. Williams**	89–104
Bacteriophage T7 RNA Polymerase. ^{19}F-Nuclear Magnetic Resonance Observations at 5-Fluorouracil-substituted Promoter DNA and RNA Transcript	**F. Rastinejad and P. Lu**	105–122
Structure and Function of the *Escherichia coli* Ribonucleotide Reductase Protein R2	**P. Nordlund and H. Eklund**	123–164
Quadratic Minimization of Predictors for Protein Secondary Structure. Application to Transmembrane α-Helices	**J. Edelman**	165–191
Structure Determination and Refinement of Human Alpha Class Glutathione Transferase A1-1, and a Comparison with the Mu and Pi Class Enzymes	**I. Sinning, G. J. Kleywegt, S. W. Cowan, P. Reinemer, H. W. Dirr, R. Huber, G. L. Gilliland, R. N. Armstrong, X. Ji, P. G. Board, B. Olin, B. Mannervik and T. A. Jones**	192–212
Crystal Structure of a Ternary Complex of *Escherichia coli* Malate Dehydrogenase, Citrate and NAD at 1·9 Å Resolution	**M. D. Hall and L. J. Banaszak**	213–222
Crystal Structure of Cleaved Bovine Antithrombin III at 3·2 Å Resolution	**L. Mourey, J.-P. Samama, M. Delarue, M. Petitou, J. Choay and D. Moras**	223–241
Hydropathy and Molar Volume Constraints on Combinatorial Mutants of the Photosynthetic Reaction Center	**S. J. Robles and D. C. Youvan**	242–252
Crystallographic Binding Studies on the Allosteric Inhibitor Glucose-6-Phosphate to T State Glycogen Phosphorylase b	**L. N. Johnson, P. Snape, J. L. Martin, K. R. Acharya, D. Barford and N. G. Oikonomakos**	253–267
Solution Structure of a Pair of Complement Modules by Nuclear Magnetic Resonance	**P. N. Barlow, A. Steinkasserer, D. G. Norman, B. Kieffer, A. P. Wiles, R. B. Sim and I. D. Campbell**	268–284
The Sequence of Cleavage of Fibrinopeptides from Fibrinogen is Important for Protofibril Formation and Enhancement of Lateral Aggregation in Fibrin Clots	**J. W. Weisel, Y. Veklich and O. Gorkun**	285–297
Crystallization Notes		
Crystallization of the Motile Major Sperm Protein (MSP) of the Nematode *Ascaris suum*	**M. Stewart, K. L. King and T. M. Roberts**	298–300
The MotA Protein from Bacteriophage T4 Contains Two Domains. Preliminary Structural Analysis by X-ray Diffraction and Nuclear Magnetic Resonance	**M. S. Finnin, D. W. Hoffman, K. N. Kreuzer, S. J. Porter, R. P. Schmidt and S. W. White**	301–304

Crystallization and Preliminary X-ray Data of Chloromuconate Cycloisomerase from *Alcaligenes eutrophus* JMP134 (pJP4)	**A. Hammer, T. Hildenbrand, H. Hoier, K.-L. Ngai, M. Schlömann and J. J. Stezowski**	305–307
Crystallization and Preliminary Crystallographic Study of Citrate Synthase from the Thermophilic Archaeon *Thermoplasma acidophilum*	**R. J. M. Russell, D. Byrom, M. J. Danson, D. W. Hough and G. L. Taylor**	308–309
Crystallization of a Complex between an Elastase-specific Inhibitor Elafin and Porcine Pancreatic Elastase	**M. Tsunemi, Y. Matsuura, S. Sakakibara and Y. Katsube**	310–311
Purification, Crystallization and Preliminary X-ray Analysis of Inorganic Pyrophosphatase from *Thermus thermophilus*	**G. Obmolova, I. Kuranova and A. Teplyakov**	312–313

Sequence Note

A Cluster of Transposon-like Repetitive Sequences in Intron 7 of the Human Dystrophin Gene	**J. C. McNaughton, J. E. Broom, D. F. Hill, W. A. Jones, C. J. Marshall, N. M. Renwick, P. A. Stockwell and G. B. Petersen**	314–320
Erratum		323

Number 2, 20 July 1993

Communications

κB-like Motifs Regulate the Induction of Immune Genes in *Drosophila*	**Y. Engström, L. Kadalayil, S.-C. Sun, C. Samakovlis, D. Hultmark and I. Faye**	327–333
A Conformational Change in the Actin Subunit Can Change the Flexibility of the Actin Filament	**A. Orlova and E. H. Egelman**	334–341
Two-dimensional Nuclear Magnetic Resonance Analysis of a Labeled Peptide Bound to a Class II Major Histocompatibility Complex Molecule	**P. C. Driscoll, J. D. Altman, J. J. Boniface, K. Sakaguchi, P. A. Reay, J. G. Omichinski, E. Appella and M. M. Davis**	342–350

Articles

Nucleotide Sequence Requirements for Self-cleavage of *Neurospora* VS RNA	**H. C. T. Guo, D. M. De Abreu, E. R. M. Tillier, B. J. Saville, J. E. Olive and R. A. Collins**	351–361
Dynamics of *in Vitro* Assembly of 16 S rRNA into 30 S Ribosomal Subunits	**T. Powers, G. Daubresse and H. F. Noller**	362–374
The Conserved Terminal Guanosine of a Group I Intron can Help Prevent Reopening of the Ligated Exons	**E. Suh and R. B. Waring**	375–385
Nutrient-responsive Promoter Elements of the V4 Gene of *Dictyostelium discoideum*	**C. E. McPherson and C. K. Singleton**	386–396
Formation of a RuvAB–Holliday Junction Complex *in Vitro*	**C. A. Parsons and S. C. West**	397–405
The Minus 35-Recognition Region of *Escherichia coli* Sigma 70 is Inessential for Initiation of Transcription at an "Extended Minus 10" Promoter	**A. Kumar, R. A. Malloch, N. Fujita, D. A. Smillie, A. Ishihama and R. S. Hayward**	406–418
*Xba*I and *Bln*I Genomic Cleavage Maps of *Escherichia coli* K-12 Strain MG1655 and Comparative Analysis of Other Strains	**J. D. Perkins, J. D. Heath, B. R. Sharma and G. M. Weinstock**	419–445

Analysis of the Chloroplast Large Subunit Ribosomal RNA Gene from 17 *Chlamydomonas* Taxa. Three Internal Transcribed Spacers and 12 Group I Intron Insertion Sites	**M. Turmel, R. R. Gutell, J.-P. Mercier, C. Otis and C. Lemieux**	446–467
Cloning, DNA Sequence, Functional Analysis and Transcriptional Regulation of the Genes Encoding Dipicolinic Acid Synthetase Required for Sporulation in *Bacillus subtilis*	**R. A. Daniel and J. Errington**	468–483
Ligand Binding to the Receptor Domain Regulates the Ratio of Kinase to Phosphatase Activities of the Signaling Domain of the Hybrid *Escherichia coli* Transmembrane Receptor, Taz1	**T. Jin and M. Inouye**	484–492
Ligand Binding Induces an Asymmetrical Transmembrane Signal through a Receptor Dimer	**Y. Yang, H. Park and M. Inouye**	493–498
Structure of the Herpes Simplex Virus Capsid. Molecular Composition of the Pentons and the Triplexes	**W. W. Newcomb, B. L. Trus, F. P. Booy, A. C. Steven, J. S. Wall and J. C. Brown**	499–511
Different Mechanisms of Recognition of Bacteriophage Qβ Plus and Minus Strand RNAs by Qβ Replicase	**I. Barrera, D. Schuppli, J. M. Sogo and H. Weber**	512–521
Three-dimensional Architecture of Human α2-Macroglobulin Transformed with Methylamine	**N. Boisset, P. Penczek, F. Pochon, J. Frank and J. Lamy**	522–529
Influence of Fluctuations on DNA Curvature. A Comparison of Flexible and Static Wedge Models of Intrinsically Bent DNA	**W. K. Olson, N. L. Marky, R. L. Jernigan and V. B. Zhurkin**	530–551
Appendix: Limiting Chain Dimensions and Persistence Length of Idealized DNA	**W. K Olson**	552–554
Refined Structures of the Ligand-binding Domain of the Aspartate Receptor from *Salmonella typhimurium*	**W. G. Scott, D. L. Milligan, M. V. Milburn, G. G. Privé, J. Yeh, D. E. Koshland, Jr and S.-H. Kim**	555–573
Long-range Surface Charge–Charge Interactions in Proteins. Comparison of Experimental Results with Calculations from a Theoretical Method	**R. Loewenthal, J. Sancho, T. Reinikainen and A. R. Fersht**	574–583
Prediction of Protein Secondary Structure at Better than 70% Accuracy.	**B. Rost and C. Sander**	584–599
Protein Unfolding Pathways Explored Through Molecular Dynamics Simulations	**V. Daggett and M. Levitt**	600–619
Crystallographic Refinement and Structure Analysis of the Complex of Wheat Germ Agglutinin with a Bivalent Sialoglycopeptide from Glycophorin A	**C. S. Wright and J. Jaeger**	620–638
Contribution of Hydration to Protein Folding Thermodynamics. I. The Enthalpy of Hydration	**G. I. Makhatadze and P. L. Privalov**	639–659
Contribution of Hydration to Protein Folding Thermodynamics. II. The Entropy and Gibbs Energy of Hydration	**P. L. Privalov and G. I. Makhatadze**	660–679
Thermodynamic and Structural Analysis of the Folding/Unfolding Transitions of the *Escherichia coli* Molecular Chaperone DnaK	**D. Montgomery, R. Jordan, R. McMacken and E. Freire**	680–692
Localization of Proteins HL29 and HL31 from *Haloarcula marismortui* within the 50 S Ribosomal Subunit by Chemical Crosslinking	**U. Bergmann and B. Wittmann-Liebold**	693–700

Crystallization Notes

Crystallization and Preliminary Crystallographic Characterization of Aspartic Proteinase-A from Baker's Yeast and Its Complexes with Inhibitors — **M. Badasso, S. P. Wood, C. Aguilar, J. B. Cooper, T. L. Blundell and T. Dreyer** — 701–703

Purification and Crystallization of Shiga Toxin from *Shigella dysenteriae* — **Y. V. Kozlov, M. M. Chernaia, M. E. Fraser and M. N. G. James** — 704–706

Author Index — 707–708

Communications

A Model of the Three-dimensional Structure of Ice Nucleation Proteins — **A. V. Kajava and S. E. Lindow** — 709–717

The Phase Transition between a Compact Denatured State and a Random Coil State in Staphylococcal Nuclease is First-Order — **A. G. Gittis, W. E. Stites and E. E. Lattman** — 718–724

Articles

Erythromycin Binding is Reduced in Ribosomes with Conformational Alterations in the 23 S rRNA Peptidyl Transferase Loop — **S. Douthwaite and C. Aagaard** — 725–731

HIV-1 Tat Overcomes Inefficient Transcriptional Elongation *in Vitro* — **M. F. Laspia, P. Wendel and M. B. Mathews** — 732–746

NePl: A Ubiquitous Transcription Factor Synergizes with v-ERBA in Transcriptional Silencing — **A. C. Köhne, A. Baniahmad and R. Renkawitz** — 747–755

Deficiency of 1-Methylguanosine in tRNA from *Salmonella typhimurium* Induces Frameshifting by Quadruplet Translocation — **T. G. Hagervall, T. M. F. Tuohy, J. F. Atkins and G. R. Björk** — 756–765

RIP60 Dimers and Multiples of Dimers Assemble Link Structures at an Origin of Bidirectional Replication in the Dihydrofolate Reductase Amplicon of Chinese Hamster Ovary Cells — **I. A. Mastrangelo, P. G. Held, L. Dailey, J. S. Wall, P. V. C. Hough, N. Heintz and N. H. Heintz** — 766–778

Homologous DNA Targeting with RecA Protein-coated Short DNA Probes and Electron Microscope Mapping on Linear Duplex Molecules — **B. M. J. Rèvet, E. P. Sena and D. A. Zarling** — 779–791

Modulation of P_{RM} Activity by the Lambda P_R Promoter in Both the Presence and Absence of Repressor — **R. S.-C. Fong, S. Woody and G. N. Gussin** — 792–804

Prediction of Protein Structure by Evaluation of Sequence-structure Fitness. Aligning Sequences to Contact Profiles Derived from Three-dimensional Structures — **C. Ouzounis, C. Sander, M. Scharf and R. Schneider** — 805–825

The Phage 434 O_R2/R1-69 Complex at 2·5 Å Resolution — **L. J. W. Shimon and S. C. Harrison** — 826–838

Crystal Structure of a Porcine Pancreatic Phospholipase A_2 Mutant. A Large Conformational Change Caused by the F63V Point Mutation — **M. M. G. M. Thunnissen, P. A. Franken, G. H. de Haas, J. Drenth, K. H. Kalk, H. M. Verheij and B. W. Dijkstra** — 839–855

Refined X-ray Structures of Haloalkane Dehalogenase at pH 6·2 and pH 8·2 and Implications for the Reaction Mechanism — **K. H. G. Verschueren, S. M. Franken, H. J. Rozeboom, K. H. Kalk and B. W. Dijkstra** — 856–872

Dissecting the Disulphide-coupled Folding Pathway of Bovine Pancreatic Trypsin Inhibitor. Forming the First Disulphide Bonds in Analogues of the Reduced Protein	**N. J. Darby and T. E. Creighton**	873–896
Determination of the Disulphide Bonding Pattern in Proteins by Local and Global Analysis of Nuclear Magnetic Resonance Data. Application to Flavoridin	**W. Klaus, C. Broger, P. Gerber and H. Senn**	897–906
The Nuclear Magnetic Resonance Solution Structure of Flavoridin, an Antagonist of the Platelet GP IIb-IIIa Receptor	**H. Senn and W. Klaus**	907–925
Characterization of a Triple Helix-specific Ligand. BePI {3-methoxy-7H-8-methyl-11-[(3′-amino) propylamino]-benzo[e]pyrido[4,3-b]indole} Intercalates into Both Double-helical and Triple-helical DNA	**D. S. Pilch, M. J. Waring, J.-S. Sun, M. Rougée, C.-H. Nguyen, E. Bisagni, T. Garestier and C. Hélène**	926–946
Structure of Human Des(1-45) Factor Xa at 2·2 Å Resolution	**K. Padmanabhan, K. P. Padmanabhan, A. Tulinsky, C. H. Park, W. Bode, R. Huber, D. T. Blankenship, A. D. Cardin and W. Kisiel**	947–966
Secondary Structure and Temperature-induced Unfolding and Refolding of Ribonuclease T_1 in Aqueous Solution. A Fourier Transform Infrared Spectroscopic Study	**H. Fabian, C. Schultz, D. Naumann, O. Landt, U. Hahn and W. Saenger**	967–981
Crystallization Notes		
Crystallization and Preliminary X-ray Analysis of the DNA Binding Domain of the Hin Recombinase with Its DNA Binding Site	**J.-A. Feng, M. Simon, D. P. Mack, P. B. Dervan, R. C. Johnson and R. E. Dickerson**	982–986
Crystallization and Preliminary X-ray Diffraction Analysis of Crystals of *Thermoascus aurantiacus* Xylanase	**M. A. Viswamitra, P. Bhanumoorthy, S. Ramakumar, M. V. Manjula, P. J. Vithayathil, S. K. Murthy and A. P. Naren**	987–988
Crystallization and X-ray Diffraction Analysis of Recombinant *Coprinus cinereus* Peroxidase	**J. F. W. Petersen, J. W. Tams, J. Vind, A. Svensson, H. Dalbøge, K. G. Welinder and S. Larsen**	989–991
Preliminary Crystallographic Study of Cyclohexadienyl Dehydratase from *Pseudomonas aeruginosa*	**G. Obmolova, A. Teplyakov, T. Xia and R. Jensen**	992–994
Crystallization of a Chitosanase from *Streptomyces* N174	**E. Marcotte, P. J. Hart, I. Boucher, R. Brzezinski and J. D. Robertus**	995–996
A Toxin that Recognizes Muscarinic Acetylcholine Receptors. Preparation and Characterization of Crystals Suitable for Structural Analysis	**R. Ménez and A. Ducruix**	997–998
Preliminary Crystallographic Studies on Scytalone Dehydratase from *Magnaporthe grisea*	**T. Lundqvist, P. C. Weber, C. N. Hodge, E. H. Braswell, J. Rice and J. Pierce**	999–1002
Crystallization of Barley (1-3,1-4)-β-glucanase, Isoenzyme II	**T. Keitel, K. K. Thomsen and U. Heinemann**	1003–1004
Crystallization of Bacteriophage fr and its Recombinant Capsids	**M. Bundule, V. Ose, P. Pumpens, K. Valegård and L. Liljas**	1005–1006
Crystallization of a Genetically Engineered Water-soluble Primary Penicillin Target Enzyme. The High Molecular Mass PBP2x of *Streptococcus pneumoniae*	**P. Charlier, G. Buisson, O. Dideberg, J. Wierenga, W. Keck, G. Laible and R. Hakenbeck**	1007–1009

Communication		
The Redox Properties of Protein Disulfide Isomerase (DsbA) of *Escherichia coli* Result from a Tense Conformation of its Oxidized Form	**M. Wunderlich, R. Jaenicke and R. Glockshuber**	559–566
Articles		
The Function of Individual Zinc Fingers in Sequence-specific DNA Recognition by Transcription Factor IIIA	**S. Del Rio, S. R. Menezes and D. R. Setzer**	567–579
Identification of the Auxin-responsive Element, *AuxRE*, in the Primary Indoleacetic Acid-inducible Gene, *PS-IAA4/5*, of Pea (*Pisum sativum*)	**N. Ballas, L.-M. Wong and A. Theologis**	580–596

Two Inactive Fragments Derived from the Yeast Mitochondrial Ribosomal Protein MrpS28 Function *in Trans* to Support Ribosome Assembly and Respiratory Growth	**M. O. Huff, P. J. Hanic-Joyce, H. Dang, L.-A. Rodrigues and S. R. Ellis**	597–605
Derivatives of the Yeast Mitochondrial Ribosomal Protein MrpS28 Replace Ribosomal Protein S15 as Functional Components of the *Escherichia coli* Ribosome	**Y. Li, M. O. Huff, P. J. Hanic-Joyce and S. R. Ellis**	606–614
Two Acidic Residues of *Escherichia coli* Methionyl-tRNA Synthetase Act as Negative Discriminants Towards the Binding of Non-cognate tRNA Anticodons	**E. Schmitt, T. Meinnel, M. Panvert, Y. Mechulam and S. Blanquet**	615–628
A Shortened Form of the *Tetrahymena thermophila* Group I Intron Can Catalyze the Complete Splicing Reaction *in trans*	**B. Sargueil and N. K. Tanner**	629–643
Basal Promoter and Enhancer Element of Yeast U6 snRNA Gene	**A.-F. Burnol, F. Margottin, P. Schultz, M.-C. Marsolier, P. Oudet and A. Sentenac**	644–658
Genetic Analysis of Periplasmic Binding Protein Dependent Transport in *Escherichia coli*. Each Lobe of Maltose-binding Protein Interacts with a Different Subunit of the $MalFGK_2$ Membrane Transport Complex	**L-I. Hor and H. A. Shuman**	659–670
Structural Polymorphism of $d(GA \cdot TC)_n$ DNA Sequences. Intramolecular and Intermolecular Associations of the Individual Strands	**J. M. Casasnovas, D. Huertas, M. Ortiz-Lombardía, J. Kypr and F. Azorín**	671–681
Structural Transitions During Maturation of Bacteriophage Lambda Capsids	**T. Dokland and H. Murialdo**	682–694
Residues of the *Bacillus subtilis* phage Φ29 Transcriptional Activator Required Both to Interact with RNA Polymerase and to Activate Transcription	**M. Mencía, M. Salas and F. Rojo**	695–704
The 2·5 Å Structure of Pokeweed Antiviral Protein	**A. F. Monzingo, E. J. Collins, S. R. Ernst, J. D. Irvin and J. D. Robertus**	705–715
A Structural Basis for Sequence Comparisons. An Evaluation of Scoring Methodologies	**M. S. Johnson and J. P. Overington**	716–738
The 1·7 Å Refined X-ray Structure of the Periplasmic Glucose/Galactose Receptor from *Salmonella typhimurium*	**J-Y. Zou, M. M. Flocco and S. L. Mowbray**	739–752
Distribution of Surface-exposed and Non-accessible Amino Acid Sequences among the Two Major Structural Domains of the S-layer Protein of *Aeromonas salmonicida*	**P. Doig, W. D. McCubbin, C. M. Kay and T. J. Trust**	753–765
How Consistent are Molecular Dynamics Simulations? Comparing Structure and Dynamics in Reduced and Oxidized *Escherichia coli* Thioredoxin	**A. Elofsson and L. Nilsson**	766–780
Crystallization Notes		
Preliminary Crystallographic Study of D(−)-Mandelate Dehydrogenase from *Rhodotorula graminis*	**A. K. Basak, D. P. Baker, C. A. Fewson and D. I. Stuart**	781–783
Crystallization and Preliminary Crystallographic Investigations of the Soluble Glucose Dehydrogenase from *Acinetobacter calcoaceticus*	**M. P. Schlunegger, M. G. Grütter, M. B. Streiff, A. J. J. Olsthoorn and J. A. Duine**	784–786

Crystallization and Preliminary X-ray Diffraction Studies of *Bacillus stearothermophilus* Farnesyl Diphosphate Synthase Expressed in *Escherichia coli* — **H. Nakane, T. Koyama, S. Obata, M. Osabe, A. Takeshita, T. Nishino, K. Ogura and K. Miki** — 787–788

Sequence Notes

Structural Characterization of the Early Indoleacetic Acid-inducible Genes, *PS-IAA4/5* and *PS-IAA6*, of Pea (*Pisum sativum* L.) — **P. W. Oeller, J. A. Keller, J. E. Parks, J. E. Silbert and A. Theologis** — 789–798

Molecular Characterization of the DNA Puff C-8 Gene of *Rhynchosciara americana* — **H. M. Frydman, E. O. Cadavid, J. Yokosawa, F. H. Silva, L. D. Navarro-Cattapan, R. V. Santelli, M. Jacobs-Lorena, M. Graessmann, A. Graessmann, A. J. Stocker and F. J. S. Lara** — 799–803

Author Index — 805–806

List of Contents Volume 234

Number 1, 5 November 1993

Communications

DNA Deletion of Mitochondrial Introns is Correlated with the Process of Senescence in *Podospora anserina* — **A. Sainsard-Chanet, O. Begel and L. Belcour** — 1–7

Assembly of Multimeric Proteins. Effect of Mutations in the α-Subunit on Membrane Assembly and Activity of Pyridine Nucleotide Transhydrogenase — **S. Ahmad, N. A. Glavas and P. D. Bragg** — 8–13

Articles

Translation Initiation Complex Formation with 30 S Ribosomal Particles Mutated at Conserved Positions in the 3′-Minor Domain of 16 S RNA — **S. Ringquist, P. Cunningham, C. Weitzmann, L. Formenoy, C. Pleij, J. Ofengand and L. Gold** — 14–27

In Vitro Binding of the Pleiotropic Transcriptional Regulatory Protein, FruR, to the *fru*, *pps*, *ace*, *pts* and *icd* Operons of *Escherichia coli* and *Salmonella typhimurium* — **T. M. Ramseier, D. Nègre, J-C. Cortay, M. Scarabel, A. J. Cozzone and M. H. Saier, Jr** — 28–44

Characterization of a Set of Integration Host Factor Mutants Deficient for DNA Binding — **A. E. Granston and H. A. Nash** — 45–59

DNA Recognition by the *Eco*K Methyltransferase. The Influence of DNA Methylation and the Cofactor *S*-adenosyl-L-methionine — **L. M. Powell, D. T. F. Dryden, D. F. Willcock, R. H. Pain and N. E. Murray** — 60–71

Negative Co-dominant Inhibition of recA Protein Function. Biochemical Properties of the recA1, recA13 and recA56 Proteins and the Effect of recA56 Protein on the Activities of the Wild-type recA Protein Function *in Vitro* — **S. D. Lauder and S. C. Kowalczykowski** — 72–86

A Regulatory Cascade in the Induction of *rhaBAD* — **S. M. Egan and R. F. Schleif** — 87–98

Temperature-sensitive Intermediate Filament Assembly. Alternative Structures of *Xenopus laevis* Vimentin *in Vitro* and *in Vivo* — **H. Herrmann, A. Eckelt, M. Brettel, C. Grund and W. W. Franke** — 99–113

Turnover of Fluorescent Nucleoside Triphosphates by Isolated Immobilized Myosin Filaments. Transient Kinetics on the Zeptomole Scale — **A. J. Sowerby, C. K. Seehra, M. Lee and C. R. Bagshaw** — 114–123

A Programmed Translational Frameshift is Required for the Synthesis of a Bacteriophage λ Tail Assembly Protein	**M. E. Levin, R. W. Hendrix and S. R. Casjens**	124–139
High-Resolution Crystal Structures of Distal Histidine Mutants of Sperm Whale Myoglobin	**M. L. Quillin, R. M. Arduini, J. S. Olson and G. N. Phillips Jr**	140–155
Orthorhombic Crystal Form of Bacteriorhodopsin Nucleated on Benzamidine Diffracting to 3·6 Å Resolution	**G. F. X. Schertler, H. D. Bartunik, H. Michel and D. Oesterhelt**	156–164
Structure of a Phosphonate-inhibited β-Lactamase. An Analog of the Tetrahedral Transition State/Intermediate of β-Lactam Hydrolysis	**C. C. H. Chen, J. Rahil, R. F. Pratt and O. Herzberg**	165–178
Crystal Structure of Phospholipase C from *Bacillus cereus* Complexed with a Substrate Analog	**S. Hansen, E. Hough, L. A. Svensson, Y-L. Wong and S. F. Martin**	179–187
Nuclear Magnetic Resonance Structural Studies of A·AT Base Triple Alignments in Intramolecular Purine·Purine·Pyrimidine DNA Triplexes in Solution	**I. Radhakrishnan, C. de los Santos and D. J. Patel**	188–197
Crystal and Molecular Structure of d(CGTAGATCTACG) at 2·25 Å Resolution	**G. A. Leonard and W. N. Hunter**	198–208
Mapping the Stability Determinants of Bacterial Tyrosyl Transfer RNA Synthetases by an Experimental Evolutionary Approach	**V. Guez-Ivanier, M. Hermann, D. Baldwin and H. Bedouelle**	209–221
Refined Crystal Structure of the Seryl-tRNA Synthetase from *Thermus thermophilus* at 2·5 Å Resolution	**M. Fujinaga, C. Berthet-Colominas, A. D. Yaremchuk, M. A. Tukalo and S. Cusack**	222–233
Low Energy of Activation for Amide Hydrogen Exchange Reactions in Proteins Supports a Local Unfolding Model	**N. K. Thomsen and F. M. Poulsen**	234–241
Crystallization Notes		
Crystallization and Preliminary X-ray Diffraction Analysis of the Complex of Human Placental 17β-Hydroxysteroid Dehydrogenase with $NADP^+$	**D-W. Zhu, X. Lee, R. Breton, D. Ghosh, W. Pangborn, W. L. Duax and S-X. Lin**	242–244
Crystallization of Bovine Adrenodoxin-reductase in a New Unit Cell and Its Crystallographic Characterization	**R-J. Kuban, A. Marg, M. Resch and K. Ruckpaul**	245–248
Sequence Note		
A *Drosophila* Gene Encoding an Epithelial Membrane Protein with Homology to CD36/LIMP II	**K. Hart and M. Wilcox**	249–253
Author Index		255

Review Article		
Rules that Govern tRNA Identity in Protein Synthesis	**W. H. McClain**	257–280
Communications		
GAG Triplets as Splice Acceptors of Last Resort. An Unusual Form of Alternative Splicing in Prothymosin α Pre-mRNA	**R. E. Manrow and S. L. Berger**	281–288

Chimeric Human Cholinesterase. Identification of Interaction Sites Responsible for Recognition of Acetyl- or Butyrylcholinesterase-specific Ligands	**Y. Loewenstein, A. Gnatt, L. F. Neville and H. Soreq**	289–296
Effect of Positive Supercoiling on DNA Compaction by Nucleosome Cores	**D. J. Clark, R. Ghirlando, G. Felsenfeld and H. Eisenberg**	297–301
Molecular Recognition Mediated by Bound Water. A Mechanism for Star Activity of the Restriction Endonuclease *Eco*RI	**C. R. Robinson and S. G. Sligar**	302–306
The Kin28 Protein Kinase is Associated with a Cyclin in *Saccharomyces cerevisiae*	**J. G. Valey, M. Simon and G. Faye**	307–310
Articles		
Promoter Strength and Structure Dictate Module Composition in RNA Polymerase III Transcriptional Activator Elements	**E. Myslinski, C. Schuster, A. Krol and P. Carbon**	311–318
GEBF-I Activates the *Drosophila* Sgs3 Gene Enhancer by Altering a Positioned Nucleosomal Core Particle	**P. Georgel, G. Dretzen, K. Jagla, F. Bellard, E. Dubrovsky, V. Calco and M. Bellard**	319–330
Monitoring of the Cooperative Unfolding of the *sunY* Group I Intron of Bacteriophage T4. The Active Form of the *sunY* Ribozyme is Stabilized by Multiple Interactions with 3′ Terminal Intron Components	**L. Jaeger, E. Westhof and F. Michel**	331–346
Lipid-protein Interactions in Crystals of Plant Light-harvesting Complex	**S. Nußberger, K. Dörr, D.-N. Wang and W. Kühlbrandt**	347–356
Domain Closure in Lactoferrin. Two Hinges Produce a See-saw Motion Between Alternative Close-packed Interfaces	**M. Gerstein, B. F. Anderson, G. E. Norris, E. N. Baker, A. M. Lesk and C. Chothia**	357–372
Molecular Dynamics with Weighted Time-averaged Restraints for a DNA Octamer. Dynamic Interpretation of Nuclear Magnetic Resonance Data	**U. Schmitz, N. B. Ulyanov, A. Kumar and T. L. James**	373–389
Two Crystal Structures of a Potently Sweet Protein. Natural Monellin at 2·75 Å Resolution and Single-chain Monellin at 1·7 Å Resolution	**J. R. Somoza, F. Jiang, L. Tong, C.-H. Kang, J. M. Cho and S.-H. Kim**	390–404
Three-dimensional Structure in Solution of the Calcium Channel Blocker ω-Conotoxin	**P. K. Pallaghy, B. M. Duggan, M. W. Pennington and R. S. Norton**	405–420
Stabilization of Protein Crystals by Electrostatic Interactions as Revealed by a Numerical Approach	**T. Takahashi, S. Endo and K. Nagayama**	421–432
Atomic Structure of a Cytochrome *c′* with an Unusual Ligand-controlled Dimer Dissociation at 1·8 Å Resolution	**Z. Ren, T. Meyer and D. E. McRee**	433–445
Structure of the Complex of *lac* Repressor Headpiece and an 11 Base-pair Half-operator Determined by Nuclear Magnetic Resonance Spectroscopy and Restrained Molecular Dynamics	**V. P. Chuprina, J. A. C. Rullmann, R. M. J. N. Lamerichs, J. H. van Boom, R. Boelens and R. Kaptein**	446–462
Anion Binding Sites in Protein Structures	**P. Chakrabarti**	463–482
Dissecting the Structure of a Partially Folded Protein. Circular Dichroism and Nuclear Magnetic Resonance Studies of Peptides from Ubiquitin	**J. P. L. Cox, P. A. Evans, L. C. Packman, D. H. Williams and D. N. Woolfson**	483–492
Crystallization Notes		
Crystallization and Preliminary Crystallographic Characterization of Bacteriophage T4 Baseplate Protein Encoded by Gene 9	**S. V. Strelkov, T. G. Zurabishvili, I. V. Nepluev, V. P. Efimov, M. N. Isupov, E. H. Harutyunyan and V. V. Mesyanzhinov**	493–495

Cocrystals of *Escherichia coli trp* Repressor Bound to an Alternative Operator DNA Sequence	J. Carey, N. Combatti, D. E. A. Lewis and C. L. Lawson	496–498
Preliminary X-ray Crystallographic Studies of Ribonuclease I from *Escherichia coli*	L. W. Lim, S. Mathur, V. J. Cannistraro and D. Kennell	499–501
Crystallization of Old Yellow Enzyme Illustrates an Effective Strategy for Increasing Protein Crystal Size	K. M. Fox and P. A. Karplus	502–507

Sequence Note

Nucleotide Sequence Analysis of Four Genes, *hupC*, *hupD*, *hupF* and *hupG*, Downstream of the Hydrogenase Structural Genes in *Bradyrhizobium japonicum*	C. Van Soom, J. Browaeys, C. Verreth and J. Vanderleyden	508–512

Resolution of Synthetic χ Structures by the FLP Site-specific Recombinase	J. E. Dixon and P. D. Sadowski	522–533
The F Plasmid CcdB Protein Induces Efficient ATP-dependent DNA Cleavage by Gyrase	P. Bernard, K. E. Kézdy, L. Van Melderen, J. Steyaert, L. Wyns, M. L. Pato, P. N. Higgins and M. Couturier	534–541
Operator Sequence Context Influences Amino Acid–Base-pair Interactions in 434 Repressor–Operator Complexes	A. C. Bell and G. B. Koudelka	542–553
Comparison of a Structural and a Functional Epitope	B. C. Cunningham and J. A. Wells	554–563
Affinity Maturation of Human Growth Hormone by Monovalent Phage Display	H. B. Lowman and J. A. Wells	564–578
Characterization of the *Neisseria* Iga_β-core. The Essential Unit for Outer Membrane Targeting and Extracellular Protein Secretion	T. Klauser, J. Krämer, K. Otzelberger, J. Pohlner and T. F. Meyer	579–593
The Role of *cosB*, the Binding Site for Terminase, the DNA Packaging Enzyme of Bacteriophage λ, in the Nicking Reaction	D. Cue and M. Feiss	594–609
Synergism between Tat and VP16 in *Trans*-activation of HIV-1 LTR	S. Ghosh, M. J. Selby and B. M. Peterlin	610–619
The Refined Structure of Bacteriophage MS2 at 2·8 Å Resolution	R. Golmohammadi, K. Valegård, K. Fridborg and L. Liljas	620–639
Crystal Structure of Canine and Bovine Granulocyte-colony Stimulating Factor (G-CSF)	B. Lovejoy, D. Cascio and D. Eisenberg	640–653
Thermodynamic Studies of the Collagen-like Region of Human Subcomponent C1q. A Water-containing Structural Model	V. M. Tischenko, A. M. Ichtchenko, C. V. Andreyev and A. V. Kajava	654–660

Affinity and Specificity of Serine Endopeptidase–Protein Inhibitor Interactions. Empirical Free Energy Calculations Based on X-ray Crystallographic Structures	**S. Krystek, T. Stouch and J. Novotny**	661–679
Structure Analysis of Cytochrome c_3 From *Desulfovibrio vulgaris* Hildenborough at 1·9 Å Resolution	**P. M. Matias, C. Frazão, J. Morais, M. Coll and M A. Carrondo**	680–699
Evolution of Allosteric Control in Glycogen Phosphorylase	**J. W. Hudson, G. B. Golding and M. M. Crerar**	700–721
Crystallographic Refinement of Bowman-Birk Type Protease Inhibitor A-II from Peanut (*Arachis hypogaea*) at 2·3 Å Resolution	**A. Suzuki, T. Yamane, T. Ashida, S. Norioka, S. Hara and T. Ikenazka**	722–734
Nuclear Magnetic Resonance Solution Structure of Dendrotoxin K from the Venom of *Dendroaspis polylepis* ***polylepis***	**K. D. Berndt, P. Güntert and K. Wüthrich**	735–750
A Structure Refinement Method Based on Molecular Dynamics in Four Spatial Dimensions	**R. C. van Schaik, H. J. C. Berendsen, A. E. Torda and W. F. van Gunsteren**	751–762
Refinement and Analysis of the Structure of the First Two Domains of Human CD4	**T. P. J. Garrett, J. Wang, Y. Yan, J. Liu, and S. C. Harrison**	763–778
Comparative Protein Modelling by Satisfaction of Spatial Restraints	**A. Šali and T. L. Blundell**	779–815
The Crystal Structure of a New High-calcium Form of Annexin V	**J. Sopkova, M. Renouard and A. Lewit-Bentley**	816–825
Refinement of the F-Actin Model Against X-ray Fiber Diffraction Data by the Use of a Directed Mutation Algorithm	**M. Lorenz, D. Popp and K. C. Holmes**	826–836
Projection Structure of Halorhodopsin from *Halobacterium halobium* at 6 Å Resolution Obtained by Electron Cryo-microscopy	**W. A. Havelka, R. Henderson, J. A. W. Heymann and D. Oesterhelt**	837–846
Crystal Structural Analysis of Mutations in the Hydrophobic Cores of Barnase	**A. M. Buckle, K. Henrick and A. R. Fersht**	847–860
Local Conformations of Peptides Representing the Entire Sequence of Bovine Pancreatic Trypsin Inhibitor and Their Roles in Folding	**J. Kemmink and T. E. Creighton**	861–878
Crystallization Notes		
Crystallization and X-ray Diffraction Study of Recombinant Platelet-derived Endothelial Cell Growth Factor	**G. Spraggon, D. Stuart, C. Ponting, C. Finnis, D. Sleep and Y. Jones**	879–880
Preliminary X-ray Crystallographic Study of the Proteasome from *Thermoplasma acidophilum*	**B. Jap, G. Pühler, H. Lücke, D. Typke, J. Löwe, D. Stock, R. Huber and W. Baumeister**	881–884
Crystallization and Preliminary X-ray Analysis of Papaya Mosaic Virus Coat Protein	**H. Zhang, E. Todderud and G. Stubbs**	885–887
Crystallization and Preliminary X-ray Analysis of (1,3)- and (1,3;1,4)-β-D-Glucanases from Germinating Barley	**L. Chen, T. J. P. Garrett, J. N. Varghese, G. B. Fincher and P. B. Høj**	888–889
Hepatitis A Virus 3C Proteinase: Some Properties, Crystallization and Preliminary Crystallographic Characterization	**M. M. Chernaia, B. A. Malcolm, M. Allaire and M. N. G. James**	890–893
Preliminary Crystallographic Study of a Complex Between an Fab of a Monoclonal Feline Peritonitis Virus Neutralizing Antibody and Its Anti-Idiotypic Fab	**N. Ban, C. Escobar, J. Day, A. Greenwood and A. McPherson**	894–896

Crystallization of Single-Chain Fv Proteins	**N. Z. Essig, J. F. Wood, A. J. Howard, R. Raag and M. Whitlow**	897–901
Preliminary X-ray Diffraction Studies of Ribgrass Mosaic Virus	**H. Wang, A. Planchart, D. Allen, R. Pattanayek and G. Stubbs**	902–904
Crystallization and Preliminary X-ray Studies on the Core Proteins of Cellobiohydrolase I and Endoglucanase I from *Trichoderma reesei*	**C. Divne, I. Sinning, J. Ståhlberg, G. Pettersson, M. Bailey, M. Siika-aho, E. Margolles-Clark, T. Teeri and T. A. Jones**	905–907
Preliminary Crystallographic Studies of Crotin II	**M.-H. Chen, K.-J. Zhou, Z.-J. Fu and K.-Z. Pan**	908–909
Crystallization and Preliminary X-ray Analysis of the Uracil-DNA Glycosylase DNA Repair Enzyme from Herpes Simplex Virus Type 1	**R. Savva and L. H. Pearl**	910–912

Conformational Flexibility in Glutamate Dehydrogenase. Role of Water in Substrate Recognition and Catalysis	**T. J. Stillman, P. J. Baker, K. L. Britton and D. W. Rice**	1131–1139
Detecting Frame Shifts by Amino Acid Sequence Comparison	**J.-M. Claverie**	1140–1157
Contribution of Buried Hydrogen Bonds to Protein Stability. The Crystal Structures of Two Barnase Mutants	**Y. W. Chen, A. R. Fersht and K. Henrick**	1158–1170
Solution Structure of a Parallel-stranded G-Quadruplex DNA	**Y. Wang and D. J. Patel**	1171–1183
The Free Energy, Enthalpy and Entropy of Native and of Partially Denatured Closed Circular DNA	**W. R. Bauer and C. J. Benham**	1184–1196
Further Examination of the Intermediate State in the Denaturation of the Tryptophan Synthase α Subunit. Evidence that the Equilibrium Denaturation Intermediate is a Molten Globule	**K. Ogasahara, E. Matsushita and K. Yutani**	1197–1206
Effect of Solvent on Collective Motions in Globular Protein	**S. Hayward, A. Kitao, F. Hirata and N. Gō**	1207–1217

Role of an Active Site Residue Analyzed by Combination of Mutagenesis and Coenzyme Analog	T. Yano, Y. Hinoue, V. J. Chen, D. E. Metzler, I. Miyahara, K. Hirotsu and H. Kagamiyama	1218–1229
Crystal Structure of *Myxococcus xanthus* Nucleoside Diphosphate Kinase and its Interaction with a Nucleotide Substrate at 2·0 Å Resolution	R. L. Williams, D. A. Oren, J. Munõz-Dorado, S. Inouye, M. Inouye and E. Arnold	1230–1247
Crystallization Notes		
Crystallization and Preliminary X-ray Studies of L-Aspartase from *Escherichia coli*	W. Shi, R. Kidd, F. Giorgianni, J. F. Schindler, R. E. Viola and G. K. Farber	1248–1249
Preliminary Crystallization and X-ray Analysis of Orthorhombic Human Endothelin	D. H. Peapus, R. W. James and B. A. Wallace	1250–1252
Crystallization and Preliminary X-ray Diffraction Analysis of Two Conformations of Intact Human Antithrombin	M. R. Wardell, J.-P. Abrahams, D. Bruce, R. Skinner and A. G. W. Leslie	1253–1258
Crystallization and Preliminary X-ray Analysis of γ-Glutamyltranspeptidase from *Escherichia coli* K-12	H. Kumagai, S. Nohara, H. Suzuki, W. Hashimoto, K. Yamamoto, H. Sakai, K. Sakabe, K. Fukuyama and N. Sakabe	1259–1262
Crystallization and Preliminary X-ray Analysis of Human Tissue Factor Extracellular Domain	C. W. G. Boys, A. Miller, K. Harlos, D. M. A. Martin, E. G. D. Tuddenham and D. P. O'Brien	1263–1265
Crystallization of Inhibited Aspartic Proteinase from *Candida albicans*	S. Cutfield, C. Marshall, P. Moody, P. Sullivan and J. Cutfield	1266–1269
Crystallization of the $NADP^+$-dependent Glutamate Dehydrogenase from *Escherichia coli*	F. C. F. Korber, P. J. Rizkallah, T. K. Attwood, J. C. Wootton, M. J. McPherson, A. C. T. North, A. J. Geddes, I. S. B. Abeysinghe, P. J. Baker, J. L. E. Dean, P. C. Engel, T. J. Stillman and D. W. Rice	1270–1273
Crystallization and X-ray Analysis of a Multienzyme Complex Containing RUBISCO and RuBP	M. V. Hosur, J. K. Sainis and K. K. Kannan	1274–1278
Crystallization of the Ribosome Inactivating Protein ML1 from *Viscum album* (Mistletoe) Complexed with β-D-Galactose	E. C. Sweeney, R. A. Palmer and U. Pfüller	1279–1281
Crystallization and Preliminary X-ray Studies of Wild-Type and Catalytic-site Mutant α-Amylase from *Bacillus subtilis*	H. Mizuno, Y. Morimoto, T. Tsukihara, T. Matsumoto and K. Takase	1282–1283
Sequence Notes		
Molecular Cloning of a P-type ATPase Gene from the Cyanobacterium *Syneohocystis* sp. PCC 6803. Homology to Eukaryotic Ca^{2+}-ATPases	M. Geisler, J. Richter and J. Schumann	1284–1289
Molecular Cloning and Developmental Expression of the *Alpha-2* Tubulin Gene of *Caenorhabditis elegans*	T. Fukushige, H. Yasuda and S. S. Siddiqui	1290–1300
Divergent Evolution of an "Orphon" Histone Gene Cluster in *Chironomus*	T. Hankeln and E. R. Schmidt	1301–1307
The DNA Sequence of Adenovirus Type 40	A. J. Davison, E. A. R. Telford, M. S. Watson, K. McBride and V. Mautner	1308–1316
Author Index		1317–1318

Keyword Index

Abrin
Primary Structure of Three Distinct Isoabrins Determined by cDNA Sequencing. Conservation and Significance., **229**, 263–267.

Acetylcholine receptor
Nicotinic Acetylcholine Receptor at 9 Å Resolution, **229**, 1101–1124.

Acetylcholinesterase
Chimeric Human Cholinesterase. Identification of Inter Sites Responsible for Recognition of Acetyl-or Butyrylcholinesterase-specific Ligands, **234**, 289–296.

***N*-acetylglucosamine**
Crystallization and Preliminary X-ray Diffraction Studies of Recombinant Barley Lectin and Pro-barley Lectin, **233**, 322–324.

***O*-acetylserine sulfhydrylase**
Crystallization and Preliminary X-ray Data for the A-Isozyme of *O*-Acetylserine Sulfhydrylase from *Salmonella typhimurium*, **231**, 1130–1132.

Acid hydrolases
Crystallization and Preliminary Crystallographic Studies of Human β-Glucuronidase, **233**, 173–176.

Acrosomal bundle
Imaging Frozen, Hydrated Acrosomal Bundle from *Limulus* Sperm at 7 Å Resolution with a 400 kV Electron Cryomicroscope, **230**, 384–386.

αA-crystallin
Protein–DNA Interactions of the Mouse αA-Crystallin Control Regions. Differences Between Expressing and Non-expressing Cells, **230**, 425–435.

Actin
Calcium Ions and the Structure of Muscle Actin Filament. An X-ray Diffraction Study, **229**, 279–285.
Normal Mode Analysis of G-actin, **230**, 186–195.
Cloning of a Secretory Gelsolin from *Drosophila melanogaster*, **230**, 709–716.
α-Actinin Increases Actin Filament End Concentration by Inhibiting Annealing, **230**, 1151–1158.
A Conformational Change in the Actin Subunit Can Change the Flexibility of the Actin Filament, **232**, 334–341.
Crossbridges in the Complete Unit Cell of Rigor Insect Flight Muscle Imaged by Three-dimensional Reconstruction from Oblique Sections, **233**, 86–108.
Refinement of the F-Actin Model against X-ray Fiber Diffraction Data by the Use of a Directed Mutation Algorithm, **234**, 826–836.

Actin collective motions
Normal Mode Analysis of G-actin, **230**, 186–195.

Actinin
α-Actinin Increases Actin Filament End Concentration by Inhibiting Annealing, **230**, 1151–1158.

α-actinin
Projection Image of Smooth Muscle α-Actinin from Two Dimensional Crystals Formed on Positively Charged Lipid Layers, **230**, 196–205.

Activation energy
Low Energy of Activation for Amide Hydrogen Exchange Reactions in Proteins Supports a Local Unfolding Model, **234**, 234–241.

Adenosine diphosphate binding
Crystal Structure of *Myxococcus xanthus* Nucleoside Diphosphate Kinase and its Interaction with a Nucleotide Substrate at 2·0 Resolution, **231**, 658–667.

***S*-adenosyl-L-methionine**
Effects of Co-factor and Deoxycytidine Substituted Oligonucleotides upon Sequence-specific Interactions between *Msp*I DNA Methyltransferase and DNA, **230**, 779–786.
DNA Recognition by the *Eco*K Methyltransferase. The Influence of DNA Methylation and the Cofactor *S*-adenosyl-L-methionine, **234**, 60–71.

Adenovirus type 40
The DNA Sequence of Adenovirus Type 40, **234**, 1308–1316.

ADP/ATP translocator
Site-directed Mutagenesis of the Yeast Mitochondrial ADP/ATP Translocator. Six Arginines and One Lysine are Essential, **230**, 1159–1170.

ADP-ribosylating
Refined Structure of *Escherichia coli* Heat-labile Enterotoxin, a Close Relative of Cholera Toxin, **230**, 890–918.

adrenodoxin reductase
Crystallization of Bovine Adrenodoxin Reductase in a New Unit Cell and Its Crystallographic Characterization, **234**, 245–248.

AEDANS
Fluorescence Energy Transfer Distance Measurements. The Hydrophobic Helical Hairpin of Colicin A in the Membrane Bound State, **230**, 1055–1067.

Aeromonas
Distribution of Surface-exposed and Non-accessible Amino Acid Sequences among the Two Major Structural Domains of the S-layer Protein of *Aeromonas salmonicida*, **233**, 753–765.

Aging
DNA Deletion of Mitochondrial Introns is Correlated with the Process of Senescence in *Podospora anserina*, **234**, 1–7.

Alcaligenes eutrophus
Crystallization and Preliminary X-ray Data of Chloromuconate Cycloisomerase from *Alcaligenes eutrophus* JMP134 (pJP4), **232**, 305–307.

Alcohol dehydrogenase
Crystallization and Preliminary X-ray Analysis of an NAD^+-dependent Alcohol Dehydrogenase from the Extreme Thermophilic Archaebacterium *Sulfolobus solfataricus*, **229**, 782–784.
Crystal Parameters of an Alcohol Dehydrogenase from the Extreme Thermophile *Thermoanaerobium brockii*, **230**, 353–355.

Aldolase
The Spatial Structure of the Class II L-Fuculose-1-phosphate Aldolase from *Escherichia coli*, **231**, 549–553.

Allostery
Molecular Basis of Allosteric Activation of Bacterial L-Lactate Dehydrogenase, **230**, 21–27.
Crystallographic Binding Studies on the Allosteric Inhibitor Glucose-6-Phosphate to T State Glycogen Phosphorylase b, **232**, 253–267.
Human Deoxyhaemoglobin-2,3-Diphosphoglycerate Complex Low-Salt Structure at 2·5 Å Resolution, **233**, 270–274.
A Novel Allosteric Mechanism in Haemoglobin. Structure of Bovine Deoxyhaemoglobin, Absence of Specific Chloride-binding Sites and Origin of the Chloride-linked Bohr Effect in Bovine and Human Haemoglogin, **233**, 536–545.

Alpha helical bundles
Crystal Structure of Canine and Bovine Granulocyte-colony Stimulating Factor (G-CSF), **234**, 640–653.

Alpha satellite
Segment Substitutions in Alpha Satellite DNA. Unusual Structure of Human Chromosome 3-specific Alpha Satellite Repeat Unit, **231**, 516–520.

Alternative splicing
GAG Triplets as Splice Acceptors of Last Resort. An Unusual Form of Alternative Splicing in Prothymosin α Pre-mRNA, **234**, 281–288.

Alzheimer's β-amyloid precursor
Crystal Structures of Rat Anionic Trypsin Complexed with the Protein Inhibitors APPI and BPTI, **230**, 919–933.

Amide proton exchange
High-resolution Solution Structure of Calcium-loaded Calbindin d_{9k}, **231**, 711–734, **231**, 711–734.

Amine oxidase
Crystallization and Preliminary Crystallographic Characterization of the Copper-containing Amine Oxidase from Pea Seedlings, **229**, 243–245.

Amino acid side-chain torsions
Rotamers: To be or not to be? An Analysis of Amino Acid Side-chain Conformations in Globular Proteins, **230**, 592–612.

Aminoacyl transfer-RNA synthetase
Symmetrical Interactions between the Translational Operator of the *thrS* Gene and Dimeric Threonyl Transfer RNA Synthetase, **230**, 704–708.
Crystallization of *Bacillus subtilis* Tryptophanyl-tRNA Synthetase, **230**, 1089–1090.
Recognition Nucleotides of *Escherichia coli* $tRNA^{Leu}$ and Its Elements Facilitating Discrimination from $tRNA^{Ser}$ and $tRNA^{Tyr}$, **231**, 219–229.
Methionyl-tRNA Synthetase Zinc Binding Domain. Three-dimensional Structure and Homology with Rubredoxin and *gag* Retroviral Proteins, **231**, 1078–1089.
Mapping the Stability Determinants of Bacterial Tyrosyl Transfer RNA Synthetases by an Experimental Evolutionary Approach, **234**, 209–221.
Refined Crystal Structure of the Seryl-tRNA Synthetase from *Thermus thermophilus* at 2·5 Å Resolution, **234**, 222–233.
Rules that Govern tRNA Identity in Protein Synthesis, **234**, 257–280.

Aminopeptidase
Crystallization and Preliminary Crystallographic Analysis of *Streptomyces griseus* Aminopeptidase, **230**, 342–344.

AMP dependent kinase
Crystallization of a Deletion Mutant of the R-subunit of cAMP Dependent Protein Kinase, **230**, 1091–1093.

Amphipathic helix
fd Coat Protein Structure in Membrane Environments, **233**, 447–463.

α-amylase
Crystallization and Preliminary X-ray Crystallographic Analysis of α-Amylase from *Bacillus subtilis*, **229**, 235–238.
Isolation, Crystallization and Preliminary Diffraction Analyses of Human Pancreatic α-Amylase, **230**, 1084–1085.
Structure and Molecular Model Refinement of Pig Pancreatic α-Amylase at 2·1 Å Resolution, **231**, 785–799.
Crystallization and Preliminary X-ray Studies of Wild Type and Catalytic-site Mutant α-Amylase from *Bacillus subtilis*, **234**, 1282–1283.

Amylase/protease inhibitor
Crystallization and Preliminary X-ray Crystallographic Analysis of Probable Amylase/Protease Inhibitor-B from Rice Seeds, **229**, 255–257.

Analytical centrifugation
On the Location of Histones H1 and H5 in the Chromatin Fiber. Studies with Immobilized Trypsin and Chymotrypsin, **229**, 917–929.

Anion
A Superfamily of ATPases with Diverse Functions Containing Either Classical or Deviant ATP-binding Motif, **229**, 1165–1174.
Human Erythrocyte Band 3. Solubilization and Reconstitution into Two-dimensional crystals, **231**, 119–132.
Anion Binding Sites in Protein Structures, **234**, 463–482.

Annexin V
The Crystal Structure of a New High-calcium Form of Annexin V, **234**, 816–825.

***Antennapedia* homeodomain**
Nuclear Magnetic Resonance Spectroscopy of a DNA Complex with the Uniformly ^{13}C-Labeled *Antennapedia* Homeodomain and Structure Determination of the DNA-bound Homeodomain, **234**, 1070–1083.
Determination of the Nuclear Magnetic Resonance Solution Structure of an *Antennapedia* Homeodomain–DNA Complex, **234**, 1084–1097.

Anthracyclines
Interactions between Morpholinyl Anthracyclines and DNA. The Crystal Structure of a Morpholino Doxorubicin Bound to d(CGTACG), **230**, 878–889.

Anthranilate synthase
Studies of the Hyperthermophile *Thermotoga maritima* by Random Sequencing of cDNA and Genomic Libraries. Identification and Sequencing of the *trpEG (D)* Operon, **231**, 960–981.

Antibiotic interaction
Erythromycin Binding is Reduced in Ribosomes with Conformational Alterations in the 23 S rRNA Peptidyl Transferase Loop, **232**, 725–731.

Antibody
Molecular Profile of an Antibody Response to HIV-1 as Probed by Combinatorial Libraries, **230**, 812–823.
Three-dimensional Structure of an Anti-steroid Fab' and Progesterone-Fab' Complex, **231**, 103–118.
Common Ring Motifs in Proteins Involving Asparagine or Glutamine Amide Groups Hydrogen-bonded to Main-chain Atoms, **231**, 888–896.
Production and Characterization of an Antibody Fv Fragment ^{15}N-Labeled in the V_L Domain Only, **232**, 15–22.
Crystal Structure of an Anticholera Toxin Peptide Complex at 2·3 Å, **232**, 1169–1175.
Preliminary Crystallographic Study of a Complex Between an Fab of a Monoclonal Feline Peritonitis Virus Neutralizing Antibody and Its Anti-Idiotypic Fab, **234**, 894–896.
Shape Complementarity at Protein/Protein Interfaces, **234**, 946–950.
Detailed Analysis of the Free and Bound Conformations of an Antibody. X-ray Structures of Fab 17/9 and Three Different Fab-peptide Complexes, **234**, 1098–1118.

Antibody affinity maturation
The Contribution of Contact and Non-contact Residues of Antibody in the Affinity of Binding to Antigen. The Interaction of Mutant D1.3 Antibodies with Lysozyme, **234**, 958–964.

Antibody canonical forms
Conformation of Complementarity Determining Region L1 Loop in Murine IgG λ Light Chain Extends the Repertoire of Canonical Forms, **229**, 597–601.

Antibody cross-reactivity
Three-dimensional Structure of an Anti-steroid Fab' and Progesterone-Fab' Complex, **231**, 103–118.

Antibody Fab carbohydrate interaction
Preliminary Crystallographic Analysis of a Fab Specific for the O-antigen of *Shigella flexneri* Cell Surface Lipopolysaccharide with/ and without Bound Saccharides, **231**, 133–136.

Antibody Fab complex
Detailed Analysis of the Free and Bound Conformations of an Antibody. X-ray Structures of Fab 17/9 and Three Different Fab-peptide Complexes, **234**, 1098–1118.

Antibody Fab fragment
Conformation of Complementarity Determining Region L1 Loop in Murine IgG λ Light Chain Extends the Repertoire of Canonical Forms, **229**, 597–601.

Antibody framework regions
Structural Patterns at Residue Positions 9, 18, 67 and 82 in the V_H Framework Regions of Human and Murine Immunoglobulins, **230**, 15–20.

Antibody human
Molecular Profile of an Antibody Response to HIV-1 as Probed by Combinatorial Libraries, **230**, 812–823.

Antibody idiotype
Preliminary Crystallographic Study of a Complex Between an Fab of a Monoclonal Feline Peritonitis Virus Neutralizing Antibody and Its Anti-Idiotypic Fab, **234**, 894–896.

Antibody linker
Crystallization of Single-Chain Fv Proteins, **234**, 897–901.

Antibody monoclonal
Evidence Indicating that the Human Proteasome is a Complex Dimer, **229**, 14–19.

Anti-carbohydrate antibody
Preliminary Crystallographic Analysis of a Fab Specific for the O-antigen of *Shigella flexneri* Cell Surface Lipopolysaccharide with and without Bound Saccharides, **231**, 133–136.

Anticodon
Undiscriminating Codon Reading with Adenosine in the Wobble Position, **230**, 739–749.
Two Acidic Residues of *Escherichia coli* Methionyl-tRNA Synthetase Act as Negative Discriminants Towards the Binding of Non-cognate tRNA Anticodons, **233**, 615–628.

Antigen
X-ray Structures of the Antigen-Binding Domains from Three Variants of Humanized anti-p185^{HER2} Antibody 4D5 and Comparison with Molecular Modeling, **229**, 969–995.
Production and Characterization of an Antibody Fv Fragment ^{15}N-Labeled in the V_L Domain Only, **232**, 15–22.
Distribution of Surface-exposed and Non-accessible Amino Acid Sequences among the Two Major Structural Domains of the S-layer Protein of *Aeromonas salmonicida*, **233**, 753–765.
The Contribution of Contact and Non-contact Residues of Antibody in the Affinity of Binding to Antigen. The Interaction of Mutant D1.3 Antibodies with Lysozyme, **234**, 958–964.

Antimutator mutations
Improbability of General Antimutators, **229**, 8–13.

Antisense RNA
Complementary Large Loops Determine the Rate of RNA Duplex Formation *in Vitro* in the Case of an Effective Antisense RNA Directed Against the Human Immunodeficiency Virus Type 1, **233**, 7–15.

Antistasin
Crystallization and Preliminary Crystallographic Analysis of Antistasin, a Leech-derived Inhibitor of Blood Coagulation Factor Xa, **231**, 1137–1138.

Antithrombin
Crystallization and Preliminary X-ray Diffraction Analysis of Two Conformations of Intact Human Antithrombin, **234**, 1253–1258.

Antithrombin III
Crystallization and Preliminary X-ray Analysis of Human Antithrombin III, **229**, 249–250.
Crystal Structure of Cleaved Bovine Antithrombin III at 3·2 Å Resolution, **232**, 223–241.

Antitumor drugs
Interactions between Morpholinyl Anthracyclines and DNA. The Crystal Structure of a Morpholino Doxorubicin Bound to d(CGTACG), **230**, 878–889.

Antiviral agent
A Comparison of the Anti-rhinoviral Drug Binding Pocket in HRV14 and HRV1A, **230**, 206–227.
Structure Determination of Antiviral Compound SCH 38057 Complexed with Human Rhinovirus 14, **230**, 857–867.

***Aplysia* Mb**
Solution Nuclear Magnetic Resonance Determination of Active Site Structure for a Paramagnetic Protein: Cyanomet *Aplysia* Myoglobin, **231**, 1009–1023.

Apomyoglobin
Guanidine Hydrochloride-induced Folding of Proteins, **231**, 180–184.

***aprt* gene**
Small Deletion and Insertion Mutations Induced by the Topoisomerase II Inhibitor Teniposide in CHO Cells and Comparison with Sites of Drug-stimulated DNA Cleavage *in Vitro*, **229**, 52–66.

Arabidopsis
A Myosin-like Protein from a Higher Plant, **231**, 148–154.

Arabinose
AraC Protein Can Activate Transcription from Only One Position and When Pointed in Only One Direction, **231**, 205–218.

AraC
AraC Protein Can Activate Transcription from Only One Position and When Pointed in Only One Direction, **231**, 205–218.

Archaea
Crystallization and Preliminary Crystallographic Study of Citrate Synthase from the Thermophilic Archaeon *Thermoplasma acidophilum*, **232**, 308–309.
Projection Structure of Halorhodopsin from *Halobacterium halobium* at 6 Å Resolution Obtained by Electron Cryo-microscopy, **234**, 837–846.

Archaebacteria
Crystallization and Preliminary X-ray Analysis of the β-Galactosidase from the Extreme Thermophilic Archaebacterium *Sulfolobus solfataricus*, **229**, 561–563.
Crystallization and Preliminary X-ray Analysis of an NAD$^+$-dependent Alcohol Dehydrogenase from the Extreme Thermophilic Archaebacterium *Sulfolobus solfataricus*, **229**, 782–784.
Localization of Proteins HL29 and HL31 from *Haloarcula marismortui* within the 50 S Ribosomal Subunit by Chemical Crosslinking, **232**, 693–700.
Preliminary X-ray Crystallographic Study of the Proteasome from *Thermoplasma acidophilum*, **234**, 881–884.

Aromatic hydrogen bonds
Local Structure Due to an Aromatic–Amide Interaction Observed by ^{1}H-Nuclear Magnetic Resonance Spectroscopy in Peptides Related to the N Terminus of Bovine Pancreatic Trypsin Inhibitor, **230**, 312–322.

Aromatic–amide interaction
Local Structure Due to an Aromatic–Amide Interaction Observed by ^{1}H-Nuclear Magnetic Resonance Spectroscopy in Peptides Related to the N Terminus of Bovine Pancreatic Trypsin Inhibitor, **230**, 312–322.

Artificial intelligence
Protein Secondary Structure Prediction Using Nearest-neighbor Methods, **232**, 1117–1129.

Ascorbate oxidase
X-ray Structures and Mechanistic Implications of Three Functional Derivatives of Ascorbate Oxidase from Zucchini. Reduced, Peroxide and Azide Forms, **230**, 997–1014.

L-aspartase
Crystallization and Preliminary X-ray Studies of L-Aspartase from *Escherichia coli*, **234**, 1248–1249.

Aspartate aminotransferase
Role of an Active Site Residue Analyzed by Combination of Mutagenesis and Coenzyme Analog, **234**, 1218–1229.

Aspartic proteinase
X-ray Analyses of Aspartic Proteinases. V. Structure and Refinement at 2·0 Å Resolution of the Aspartic Proteinase from *Mucor pusillus*, **230**, 260–283.
Crystallization and Preliminary Crystallographic Characterization of Aspartic Proteinase-A from Baker's Yeast and Its Complexes with Inhibitors, **232**, 701–703.
Crystallization of Inhibited Aspartic Proteinase from *Candida albicans*, **234**, 1266–1269.

AspRS
Overproduction and Purification of Native and Queuine-lacking *Escherichia coli* $tRNA^{Asp}$. Role of the Wobble Base in $tRNA^{Asp}$ Acylation, **234**, 965–974.

Astacin
Refined 1·8 Å X-ray Crystal Structure of Astacin, a Zinc-endopeptidase from the Crayfish *Astacus astacus* L. Structure Determination, Refinement, Molecular Structure and Comparison with Thermolysin, **229**, 945–968.

Atomic force microscopy
New Approach for Atomic Force Microscopy of Membrane Proteins. The Imaging of Cholera Toxin, **229**, 286–290.

ATP binding
Three-dimensional Structure of the Glutathione Synthetase from *Escherichia coli* B at 2·0 Å Resolution, **229**, 1083–1100.
Mutagenesis of the P-loop Motif in the ATP Binding Site of the RecA Protein from *Escherichia coli*, **232**, 1048–1059.
Negative Co-dominant Inhibition of recA Protein Function. Biochemical Properties of the recA1, recA13 and recA56 Proteins and the Effect of recA56 Protein on the Activities of the Wild-type recA Protein Function *in Vitro*, **234**, 72–86.

ATPase
Crystallization of F_1-ATPase from Bovine Heart Mitochondria, **229**, 787–790.
Nuclear Control of the Messenger RNA Expression for Mitochondrial ATPase Subunit 9 in a New Yeast Mutant, **229**, 909–916.
Normal Mode Analysis of G-actin, **230**, 186–195.
Turnover of Fluorescent Nucleoside Triphosphates by Isolated Immobilized Myosin Filaments, **234**, 114–123.
Molecular Cloning of a P-type ATPase Gene from the Cyanobacterium *Synechocystis* sp. PCC 6803. Homology to Eukaryotic Ca^{2+}-ATPases, **234**, 1284–1289.

ATP-dependent nuclease
Biochemical Characterization of a Mutant recBCD Enzyme, the $recB^{2109}CD$ Enzyme, Which Lacks χ-specific, but Not Non-specific, Nuclease Activity, **231**, 605–620.
The Mutant recBCD Enzyme, $recB^{2109}CD$ Enzyme, Has Helicase Activity but Does Not Promote Efficient Joint Molecule Formation *in Vitro*, **231**, 621–633.

ATP-synthase
Formation *in Vivo*, Purification and Crystallization of a Complex of the γ and ε Subunits of the F_0F_1-ATPase of *Escherichia coli*, **229**, 1159–1162.

Auxin
Identification of the Auxin-responsive Element, *AuxRE*, in the Primary indoleacetic Acid-inducible Gene, *PS-IAA4/5*, of Pea (*Pisum sativum*), **233**, 580–596.
Structural Characterization of the Early Indoleacetic Acid-inducible Genes, *PS-IAA4/5* and *PS-IAA6*, of Pea (*Pisum sativum* L.), **233**, 789–798.

Avian αB-crystallin
An Avian αB-Crystallin. Non-lens Expression and Sequence Similarities with both Small (HSP27) and Large (HSP70) Heat Shock Proteins, **232**, 1221–1226.

Azaleucine
Phenotypic Suppression by Incorporation of an Alien Amino Acid, **231**, 161–166.

Azidophenacyl bromide
Phenyl Azide-mediated Photocrosslinking Analysis of Cro–DNA Interaction, **230**, 453–460.

Azurin mutant
X-ray Analysis and Spectroscopic Characterization of M121Q Azurin. A Copper Site Model for Stellacyanin, **229**, 1007–1021.

Bacillus cereus
Prokaryotic Members of a New Family of Putative Helicases with Similarity to Transcription Activator SNF2, **230**, 684–688.

Bacillus subtilis
Crystallization and Preliminary X-ray Crystallographic Analysis of α-Amylase from *Bacillus subtilis*, **229**, 235–238.
Missense Mutations in the *Bacillus subtilis gnt* Repressor that Diminish Operator Binding Ability, **231**, 167–174.
Cloning, DNA Sequence, Functional Analysis and Transcriptional Regulation of the Genes Encoding Dipicolinic Acid Synthetase Required for Sporulation in *Bacillus subtilis*, **232**, 468 483.
Residues of the *Bacillus subtilis* phage Φ29 Transcriptional Activator Required Both to Interact with RNA Polymerase and to Activate Transcription, **233**, 695–704.

Bacillus thuringiensis
Cloning and Characterization of a Novel *Bacillus thuringiensis* Cytolytic Delta-Endotoxin, **229**, 319–327.

Bacillus Xylanase
Crystallization and Preliminary X-ray Analysis of a Thermophillic *Bacillus* Xylanase, **230**, 664–666.

Bacterial chemotaxis
The 1·7 Å Refined X-ray Structure of the Periplasmic Glucose/Galactose Receptor from *Salmonella typhimurium*, **233**, 739–752.

Bacterial flagellum
Domain Organization of the Subunit of the *Salmonella typhimurium* Flagellar Hook, **229**, 79–84.

Bacterial genetics
Precise Deletions in Large Bacterial Genomes by Vector-mediated Excision (VEX). The *trfA* Gene of Promiscuous Plasmid RK2 is Essential for Replication in Several Gram-negative Hosts, **230**, 174–185.

Bacterial outer membrane
The Orientation of Porin OmpF in the Outer Membrane of *Escherichia coli*, **233**, 400–413.

Bacterial transport
The 1·7 Å Refined X-ray Structure of the Periplasmic Glucose/Galactose Receptor from *Salmonella typhimurium*, **233**, 739–752.

Bacteriophage
Crystallization of the Major Coat Protein of PRD1, a Bacteriophage with an Internal Membrane, **230**, 349–352.
Structural Transitions During Maturation of Bacteriophage Lambda Capsids, **233**, 682–694.

Bacteriophage 434
The Bacteriophage 434 Right Operator. Roles of O_R1, O_R2 and O_R3, **230**, 28–40.

Bacteriophage coat protein
Crystallization of the Major Coat Protein of PRD1, a Bacteriophage with an Internal Membrane, **230**, 349–352.

Bacteriophage fr
Crystallization of Bacteriophage fr and its Recombinant Capsids, **232**, 1005–1006.

Bacteriophage HK022
Antitermination of Early Transcription in Phage HK022. Absence of a Phage-encoded Antitermination Factor, **229**, 368–381.
Highly Cooperative DNA Binding by the Coliphage HK022 Repressor, **230**, 1108–1130.

Bacteriophage host factor
Different Mechanisms of Recognition of Bacteriophage Qβ Plus and Minus Strand RNAs by Qβ Replicase, **232**, 512–521.

Bacteriophage induction
The Bacteriophage 434 Right Operator. Roles of O_R1, O_R2 and O_R3, **230**, 28–40.

Bacteriophage lambda
Clustered Arginine Residues of Bacteriophage λ N Protein are Essential to Antitermination of Transcription, but Their Locale Cannot Compensate for *boxB* Loop Defects, **231**, 343–360.
The Role of *cosB*, the Binding Site for Terminase, the DNA Packaging Enzyme of Bacteriophage λ, in the Nicking Reaction, **234**, 594–609.

Bacteriophage maturation
Suppression of Bacteriophage T7 ssb Mutation with Host ssb, **234**, 926–931.

Bacteriophage morphogenesis
Protein-protein Interactions During Filamentous Phage Assembly, **231**, 689–697.

Bacteriophage MS2
The Refined Structure of Bacteriophage MS2 at 2·8 Å Resolution, **234**, 620–639.

Bacteriophage Mu
The F Plamid CcdB Protein Induces Efficient ATP-dependent DNA Cleavage by Gyrase, **234**, 534–541.

Bacteriophage λ
Effects of a Single Base-pair Deletion in the Bacteriophage λ P_{RM} Promoter. Repression of P_{RM} by Repressor Bound at O_R2 and by RNA Polymerase Bound at P_R, **229**, 37–51.
A Programmed Translational Frameshift is Required for the Synthesis of a Bacteriophage λ Tail Assembly Protein, **234**, 124–139.

Bacteriophage P1
Plasmid Addiction Genes of Bacteriophage P1: *doc*, which Causes Cell Death on Curing of Prophage, and *phd*, which Prevents Host Death when Prophage is Retained, **233**, 414–428.

Bacteriophage P22
Three-dimensional Transformation of Capsids Associated with Genome Packaging in a Bacterial Virus, **231**, 65–74.

Bacteriophage post-segregational killing
Plasmid Addiction Genes of Bacteriophage P1: *doc*, which Causes Cell Death on Curing of Prophage, and *phd*, which Prevents Host Death when Prophage is Retained, **233**, 414–428.

Bacteriophage Qβ
Different Mechanisms of Recognition of Bacteriophage Qβ Plus and Minus Strand RNAs by Qβ Replicase, **232**, 512–521.

Bacteriophage R17
Reversible Pressure Dissociation of R17 Bacteriophage. The Physical Individuality of Virus Particles, **231**, 999–1008.

Bacteriophage replicase
Different Mechanisms of Recognition of Bacteriophage Qβ Plus and Minus Strand RNAs by Qβ Replicase, **232**, 512–521.

Bacteriophage T4
Improbability of General Antimutators, **229**, 8–13.
Assembly of the Bacteriophage T4 Replication Machine Requires the Acidic Carboxy Terminus of Gene *32* Protein, **229**, 398–418.
Expression of Bacteriophage T4 Gene *25* is Regulated *via* RNA Secondary Structure in the Translational Initiation Region, **230**, 717–721.
Endonuclease VII of Phage T4 Triggers Mismatch Correction *in Vitro*, **230**, 868–877.
The MotA Protein from Bacteriophage T4 Contains Two Domains. Preliminary Structural Analysis by X-ray Diffraction and Nuclear Magnetic Resonance, **232**, 301–304.
Dual Role of the Sequence-specific Bacteriophage T4 Endoribonuclease RegB. mRNA Inactivation and mRNA Destabilization, **233**, 429–446.
Crystallization and Preliminary Crystallographic Characterization of Bacteriophage T4 Baseplate Protein Encoded by Gene 9, **234**, 493–495.

Bacteriophage T5
Preliminary Crystallographic Studies on the D15 5′ to 3′ Exonuclease from Phage T5, **233**, 179–182.

Bacteriophage T7
Bacteriophage T7 RNA Polymerase. ^{19}F-Nuclear Magnetic Resonance Observations at 5-Fluorouracil-substituted Promoter DNA and RNA Transcript, **232**, 105–122.
Suppression of Bacteriophage T7 ssb Mutation with Host ssb, **234**, 926–931.

Bacteriophage T7 RNA polymerase
Recognition Nucleotides of *Escherichia coli* $tRNA^{Leu}$ and Its Elements Facilitating Discrimination from $tRNA^{Ser}$ and $tRNA^{Tyr}$, **231**, 219–229.
Coupling of rRNA Transcription and Ribosomal Assembly *in Vivo*. Formation of Active Ribosomal Subunits in *Escherichia coli* Requires Transcription of rRNA Genes by Host RNA Polymerase which Cannot be Replaced by Bacteriophage T7 RNA Polymerase, **231**, 581–593.

Bacteriophage tail assembly
A Programmed Translational Frameshift is Required for the Synthesis of a Bacteriophage λ Tail Assembly Protein, **234**, 124–139.

Bacteriophage Φ29
Residues of the *Bacillus subtilis* phage Φ29 Transcriptional Activator Required Both to Interact with RNA Polymerase and to Activate Transcription, **233**, 695–704.

Bacteriophage ϕ29
Superhelical Path of the DNA in the Nucleoprotein Complex that Activates the Initiation of Phage ϕ29 DNA Replication, **230**, 248–259.

Bacteriophage ϕ6
Structural Studies of the Enveloped dsRNA Bacteriophage ϕ6 of *Pseudomonas syringae* by Raman Spectroscopy. I. The Virion and Its Membrane Envelope, **230**, 461–472.

Bacteriorhodopsin
Orthorhombic Crystal Form of Bacteriorhodopsin Nucleated on Benzamidine Diffracting to 3·6 Å Resolution, **234**, 156–164.
Projection Structure of Halorhodopsin from *Halobacterium halobium* at 6 Å Resolution Obtained by Electron Cryo-microscopy, **234**, 837–846.

Band 3
Human Erythrocyte Band 3. Solubilization and Reconstitution into Two-dimensional crystals, **231**, 119–132.

Barley
Crystal Structure of an Endochitinase from *Hordeum vulgare* L. Seeds, **229**, 189–193.
Crystallization of Barley (1-3,1-4)-β-glucanase, Isoenzyme II, **232**, 1003–1004.
Crystallization and Preliminary X-ray Diffraction Studies of Recombinant Barley Lectin and Pro-barley Lectin, **233**, 322–324.

Barnase
Long-Range Surface Charge–Charge Interactions in Proteins. Comparison of Experimental Results with Calculations from a Thoretical Method, **232**, 574–583.

Refolding of Barnase in the Presence of GroE, **232**, 1197–1207.
Step-wise Mutation of Barnase to Binase. A Procedure for Engineering Increased Stability of Proteins and an Experimental Analysis of the Evolution of Protein Stability, **233**, 305–312.
Contribution of Buried Hydrogen Bonds to Protein Stability. The Crystal Structures of Two Barnase Mutants, **234**, 1158–1170.

β-barrel
Crystal Structures of Holo and Apo-cellular Retinol-binding Protein II, **230**, 1247–1259.
Characterization of the *Neisseria* Iga_β-core, **234**, 579–593.

Base bulges
Nuclear Magnetic Resonance Study of a Deoxyoligonucleotide Duplex Containing a Three Base Bulge, **229**, 173–188.

Base change mutations
Some Base Substitutions in the Leader of an *Escherichia coli* Ribosomal RNA Operon Affect the Structure and Function of Ribosomes. Evidence for a Transient Scaffold Function of the rRNA Leader, **233**, 203–218.

Base composition
The DNA Sequence of Adenovirus Type 40, **234**, 1308–1316.

Base stacking
Sequence-dependent DNA Structure. The Role of Base Stacking Interactions, **230**, 1025–1054.

Base-pair displacement
High Resolution Crystal Structure of the *A*-DNA Decamer d(CCCGGCCGGG). Novel Intermolecular Base-paired G * (G·C) Triplets, **231**, 431–444.

Base-pairing
Suppression of Loss-of-function Mutations in *Escherichia coli* Ribonuclease P RNA (M1 RNA) by a Specific Base-pair Disruption, **230**, 11–14.

Baseplate triggering
Crystallization and Preliminary Crystallographic Characterization of Bacteriophage T4 Baseplate Protein Encoded by Gene 9, **234**, 493–495.

Basic winged bean lectin
Crystallization and Preliminary X-ray Studies of the Basic Lectin from Winged Bean (*Psophocarpus tetragonolobus*), **229**, 558–560.

Bestatin
Re-refinement of the X-Ray Crystal Structure of Bovine Lens Leucine Aminopeptidase Complexed with Bestatin, **230**, 722–724.

Beta amylase
Preliminary Crystallographic Analysis of Sweet Potato Beta Amylase, **229**, 253–254.

Betaine
Isolation and Sequencing of *Escherichia coli* Gene *proP* Reveals Unusual Structural Features of the Osmoregulatory Proline/Betaine Transporter, ProP, **229**, 268–276.

Bifidobacterium longum
Molecular Basis of Allosteric Activation of Bacterial L-Lactate Dehydrogenase, **230**, 21–27.

Bile salts
Crystallization of Pancreatic Procolipase and of its Complex with Pancreatic Lipase, **229**, 552–554.

Binding protein
Pathway of Activation by Magnesium Ions of Substrates for the Catalytic Subunit of RNase P from *Escherichia coli*, **230**, 750–756.
Crystallization and Preliminary X-ray Analysis of the Periplasmic Dipeptide Binding Protein from *Escherichia coli*, **231**, 145–147.
Structure of the Recombinant N-Terminal Lobe of Human Lactoferrin at 2·0 Å Resolution, **232**, 1084–1100.
Human Deoxyhaemoglobin-2,3-Diphosphoglycerate Complex Low-Salt Structure at 2·5 Å Resolution, **233**, 270–274.
Domain Closure in Lactoferrin. Two Hinges Produce a See-saw Motion Between Alternative Close-packed Interfaces, **234**, 357–372.

Biodegradation
Refined X-ray Structures of Haloalkane Dehalogenase at pH 6·2 and pH 8·2 and Implications for the Reaction Mechanism, **232**, 856–872.

Bioremediation
Preliminary Analysis of Crystals of 4-Oxalocrotonate Tautomerase, an Enzyme Composed of Unusually Small Monomers, **231**, 509–512.

Biotin
Three-dimensional Structure of the Tetragonal Crystal Form of Egg-white Avidin in its Functional Complex with Biotin at 2·7 Å Resolution, **231**, 698–710.

Biotinylated DNA
Electron Microscopy Visualization of Oligonucleotide Binding to Duplex DNA *via* Triplex Formation, **230**, 379–383.
Electron Microscopy of DNA Excision Repair Patches Produced by Human Cell Extracts, **231**, 251–260.

Bleomycin
The Influence of the Base-paired Flanking region on Structure and Function of the Ferritin mRNA Iron Regulatory Element, **231**, 230–240.

Blood coagulation
Crystallization and Preliminary X-ray Analysis of Human Antithrombin III, **229**, 249–250.
Crystallization and Preliminary Crystallographic Analysis of Antistasin, a Leech-derived Inhibitor of Blood Coagulation Factor Xa, **231**, 1137–1138.
Crystallization and Preliminary X-ray Analysis of Human Tissue Factor Extracellular Domain, **234**, 1263–1265.

Blue copper oxidase
X-ray Structures and Mechanistic Implications of Three Functional Derivatives of Ascorbate Oxidase from Zucchini. Reduced, Peroxide and Azide Forms, **230**, 997–1014.

Blue copper protein
X-ray Analysis and Spectroscopic Characterization of M121Q Azurin. A Copper Site Model for Stellacyanin, **229**, 1007–1021.

Bohr effect
A Mutagenic Study of the Allosteric Linkage of His(HC3)146β in Haemoglobin, **230**, 1291–1296.
A Novel Allosteric Mechanism in Haemoglobin. Structure of Bovine Deoxyhaemoglobin, Absence of Specific Chloride-binding Sites and Origin of the Chloride-linked Bohr Effect in Bovine and Human Haemoglogin, **233**, 536–545.

Bound water
Molecular Recognition Mediated by Bound Water. A Mechanism for Star Activity of the Restriction Endonuclease *Eco*RI, **234**, 302–306.

Bovine enterovirus
Preliminary Crystallographic Analysis of Bovine Enterovirus, **231**, 930–932.

Bovine mitochondria
Crystallization of F_1-ATPase from Bovine Heart Mitochondria, **229**, 787 790.

Bovine pancreatic trypsin inhibitor
Partially Folded Conformation of the (30-51) Intermediate in the Disulphide Folding Pathway of Bovine Pancreatic Trypsin Inhibitor. ^1H and ^{15}N Resonance Assignments and Determination of Backbone Dynamics from ^{15}N Relaxation Measurements, **229**, 1125–1146.
Local Structure Due to an Aromatic–Amide Interaction Observed by ^1H-Nuclear Magnetic Resonance

Spectroscopy in Peptides Related to the N Terminus of Bovine Pancreatic Trypsin Inhibitor, **230**, 312–322.
Hydration of Proteins. A Comparison of Experimental Residence Times of Water Molecules Solvating the Bovine Pancreatic Trypsin Inhibitor with Theoretical Model Calculations, **231**, 1040–1048.
Affinity and Specificity of Serine Endopeptidase–Protein Inhibitor Interactions. Empirical Free Energy Calculations Based on X-ray Crystallographic Structures, **234**, 661–679.
Local Conformations of Peptides Representing the Entire Sequence of Bovine Pancreatic Trypsin Inhibitor and Their Roles in Folding, **234**, 861–878.

Bowman-Birk type inhibitor
Crystallographic Refinement of Bowman-Birk Type Protease Inhibitor A-II from Peanut (*Arachis hypogaea*) at 2·3 Å Resolution, **234**, 722–734.

Bradyrhizobium japonicum
Nucleotide Sequence Analysis of Four Genes, *hupC*, *hupD*, *hupF* and *hupG*, Downstream of the Hydrogenase Structural Genes in *Bradyrhizobium japonicum*, **234**, 508–512.

bZIP protein
Plant bZIP Protein DNA Binding Specificity, **230**, 1131–1144.
The X-ray Structure of the GCN4-bZIP Bound to ATF/CREB Site DNA Shows the Complex Depends on DNA Flexibility, **233**, 139–154.

C. elegans
The Gut Esterase Gene (*ges-1*) From the Nematodes *Caenorhabditis elegans* and *Caenorhabditis briggsae*, **229**, 890–908.

C_3HC_4 motif
A Novel Arrangement of Zinc-binding Residues and Secondary Structure in the C_3HC_4 Motif of an Alpha Herpes Virus Protein Family, **234**, 1038–1047.

Caenorhabditis elegans
The Gut Esterase Gene (*ges-1*) From the Nematodes *Caenorhabditis elegans* and *Caenorhabditis briggsae*, **229**, 890–908.

Calbindin D_{9k}
Two-dimensional ^1H Nuclear Magnetic Resonance Studies of the Half-saturated $(Ca^{2+})_1$ State of Calbindin D_{9k}. Further Implications for the Molecular Basis of Cooperative Ca^{2+} binding, **231**, 415–430.
High-resolution Solution Structure of Calcium-loaded Calbindin D_{9k}, **231**, 711–734.

Calcium binding protein
Calcium Ions and the Structure of Muscle Actin Filament. An X-ray Diffraction Study, **229**, 279–285.
Structure of a Sarcoplasmic Calcium-binding Protein from Amphioxus Refined at 2·4 Å Resolution, **229**, 461–471.
Cloning of a Secretory Gelsolin from *Drosophila melanogaster*, **230**, 709–716.
Refinement of Recombinant Oncomodulin at 1·30 Å Resolution, **230**, 1216–1224.
Two-dimensional ^1H Nuclear Magnetic Resonance Studies of the Half-saturated $(Ca^{2+})_1$ State of Calbindin D_{9k}. Further Implications for the Molecular Basis of Cooperative Ca^{2+} binding, **231**, 415–430.
High-resolution Solution Structure of Calcium-loaded Calbindin D_{9k}, **231**, 711–734.
Structure and Molecular Model Refinement of Pig Pancreatic α-Amylase at 2·1 Å Resolution, **231**, 785–799.
The Crystal Structure of a New High-calcium Form of Annexin V, **234**, 816–825.

Calcium-loaded Calbindin D_{9k}
High-resolution Solution Structure of Calcium-loaded Calbindin d_{9k}, **231**, 711–734, **231**, 711–734.

Calmodulin
A Myosin-like Protein from a Higher Plant, **231**, 148–154.

Calorimetry
Protein Folding in the Absence of the Solvent Ordering Contribution to the Hydrophobic Interaction, **229**, 502–511.
Crystallization and Stoichiometry of Binding of a Complex between a Rat Intestinal Fc Receptor and Fc, **230**, 1077–1083.
Energetics of a Stable Intramolecular DNA Triple Helix Formation, **230**, 1278–1290.
Are the Molten Globule and the Unfolded States of Apo-α-Lactalbumin Enthalpically Equivalent?, **232**, 5–8.
Further Examination of the Intermediate State in the Denaturation of the Tryptophan Synthase α Subunit. Evidence that the Equilibrium Denaturation Intermediate is a Molten Globule, **234**, 1197–1206.

Campylobacter
Significance of Duplicated Flagellin Genes in *Campylobacter*, **230**, 359–363.

Cancer chemotherapy
T4 Endonuclease VII Cleaves DNA Containing a Cisplatin Adduct, **233**, 77–85.

Candida albicans
Crystallization of Inhibited Aspartic Proteinase from *Candida albicans*, **234**, 1266–1269.

Capsular polysaccharide
An Imbalance of HU Synthesis Induces Mucoidy in *Escherichia coli*, **234**, 1021–1037.

Carbohydrate-binding
Structures of the Lectin IV of *Griffonia simplicifolia* and its Complex with the Lewis b Human Blood Group Determinant at 2·0 Å Resolution, **230**, 950–965.

Carbonic anhydrase II
Crystal Structure of the Complex between Human Carbonic Anhydrase II and the Aromatic Inhibitor 1,2,4-Triazole, **232**, 9–14.

Carboxyl-carboxylate pairs
Preliminary X-ray Diffraction Studies of Ribgrass Mosaic Virus, **234**, 902–904.

Carboxy-terminal pro-peptide
Crystallization and Preliminary X-ray Diffraction Studies of Recombinant Barley Lectin and Pro-barley Lectin, **233**, 322–324.

Catalytic mechanism
X-ray Structures and Mechanistic Implications of Three Functional Derivatives of Ascorbate Oxidase from Zucchini. Reduced, Peroxide and Azide Forms, **230**, 997–1014.
Refined X-ray Structures of Haloalkane Dehalogenase at pH 6·2 and pH 8·2 and Implications for the Reaction Mechanism, **232**, 856–872.

Catalytic RNA
Suppression of Loss-of-function Mutations in *Escherichia coli* Ribonuclease P RNA (M1 RNA) by a Specific Base-pair Disruption, **230**, 11–14.
Pathway of Activation by Magnesium Ions of Substrates for the Catalytic Subunit of RNase P from *Escherichia coli*, **230**, 750–756.
Identification of a Region within M1 RNA of *Escherichia coli* RNase P Important for the Location of the Cleavage Site on a Wild-type tRNA Precursor, **231**, 594–604.
Nucleotide Sequence Requirements for Self-cleavage of *Neurospora* VS RNA, **232**, 351–361.

Catenanes
Monte Carlo Analysis of the Conformation of DNA Catenanes, **232**, 1130–1140.

Cavity
Similar Hydrophobic Replacements of Leu99 and Phe153 within the Core of T4 Lysozyme Have Different Structural and Thermodynamic Consequences, **229**, 747–769.

Crystal Structural Analysis of Mutations in the Hydrophobic Cores of Barnase, **234**, 847–860.

CcdB protein
Purification, Circular Dichroism Analysis, Crystallization and Primary X-ray Diffraction Analysis of the F Plasmid CcdB Killer Protein, **231**, 513–515.
The F Plamid CcdB Protein Induces Efficient ATP-dependent DNA Cleavage by Gyrase, **234**, 534–541.

CCP
Solution Structure of a Pair of Complement Modules by Nuclear Magnetic Resonance, **232**, 268–284.

cDNA
Molecular Cloning and Expression of the Transformation Sensitive Epithelial Marker Stratifin. A Member of a Protein Family that has been Involved in the Protein Kinase C Signalling Pathway, **231**, 982–998.

Cell
The Canine Parvovirus Empty Capsid Structure, **233**, 231–244.

Cell cycle
Purification and Crystallization of Human Cyclin-dependent Kinase 2, **230**, 1317–1319.
The Kin28 Protein Kinase is Associated with a Cyclin in *Saccharomyces cerevisiae*, **234**, 307–310.

Cell lineage
The Gut Esterase Gene (*ges-1*) From the Nematodes *Caenorhabditis elegans* and *Caenorhabditis briggsae*, **229**, 890–908.

Cell recognition molecules
Nuclear Magnetic Resonance Solution Structure of the Pheromone Er-10 from the Ciliated Protozoan *Euplotes raikovi*, **231**, 800–816.

Cellulase
Crystallization and Preliminary X-ray Studies on the Core Proteins of Cellobiohydrolase I and Endoglucanase I from *Trichoderma reesei*, **234**, 905–907.

Centromere
Structure of the Sequences Adjacent to the Centromeric Alphoid Satellite DNA Array on the Human Y Chromosome, **230**, 787–799.

Channels
Energetics of Heterodimer Formation among Gramicidin Analogues with an NH_2-terminal Addition or Deletion. Consequences of Missing a Residue at the Join in the Channel, **231**, 1102–1121.

Chaperone
Mutation Ala2 → Ser Destabilizes Intersubunit Interactions in the Molecular Chaperone GroEL, **231**, 58–64.

Chaperonin
Refolding of Barnase in the Presence of GroE, **232**, 1197–1207.

Chemical modification
Structural Polymorphism of $d(GA{\cdot}TC)_n$ DNA Sequences. Intramolecular and Intermolecular Associations of the Individual Strands, **233**, 671–681.

Chemical probes
Solution Structure of Selenocysteine-inserting $tRNA^{Sec}$ from *Escherichia coli*. Comparison with Canonical $tRNA^{Ser}$, **231**, 274–292.
Dynamics of *In Vitro* Assembly of 16 S rRNA into 30 S Ribosomal Subunits, **232**, 362–374.

Chemotaxis
Crystallization and Preliminary X-ray Analysis of the Periplasmic Dipeptide Binding Protein from *Escherichia coli*, **231**, 145–147.
Ligand Binding to the Receptor Domain Regulates the Ratio of Kinase to Phosphatase Activities of the Signaling Domain of the Hybrid *Escherichia coli* Transmembrane Receptor, Taz1, **232**, 484–492.
Influence of Fluctuations on DNA Curvature. A Comparison of Flexible and Static Wedge Models of Intrinsically, **232**, 530–554.
Refined Structures of the Ligand-binding Domain of the Aspartate Receptor from *Salmonella typhimurium*, **232**, 555–573.

Chicken gene
Structure of the Chicken Gene for SNAP-25 Reveals Duplicated Exons Encoding Distinct Isoforms of the Protein, **233**, 67–76.

Chimera
Chimeric Human Cholinesterase. Identification of Inter Sites Responsible for Recognition of Acetyl-or Butyrylcholinesterase-specific Ligands, **234**, 289–296.

Chironomus
Divergent Evolution of an "Orphon" Histone Gene Cluster in *Chironomus*, **234**, 1301–1307.

Chitosanase
Crystallization of a Chitosanase from *Streptomyces* N174, **232**, 995–996.

Chlamydomonas
Analysis of the Chloroplast Large Subunit Ribosomal RNA Gene from 17 *Chlamydomonas* Taxa, **232**, 446–467.

Chloride ion
Structure and Molecular Model Refinement of Pig Pancreatic α-Amylase at 2·1 Å Resolution, **231**, 785–799.
A Novel Allosteric Mechanism in Haemoglobin. Structure of Bovine Deoxyhaemoglobin, Absence of Specific Chloride-binding Sites and Origin of the Chloride-linked Bohr Effect in Bovine and Human Haemoglogin, **233**, 536–545.

Chloroacetaldehyde
Structural Polymorphism of Homopurine-Homopyrimidine Sequences at Neutral pH, **231**, 1090–1101.

Chloromuconate cycloisomerase
Crystallization and Preliminary X-ray Data of Chloromuconate Cycloisomerase from *Alcaligenes eutrophus* JMP134 (pJP4), **232**, 305–307.

Chloroplast DNA
Analysis of the Chloroplast Large Subunit Ribosomal RNA Gene from 17 *Chlamydomonas* Taxa, **232**, 446–467.

Cholera toxin
New Approach for Atomic Force Microscopy of Membrane Proteins. The Imaging of Cholera Toxin, **229**, 286–290.
Refined Structure of *Escherichia coli* Heat-labile Enterotoxin, a Close Relative of Cholera Toxin, **230**, 890–918.
Crystal Structure of an Anticholera Toxin Peptide Complex at 2·3 Å, **232**, 1169–1175.

Chorion
Negative and Positive Regulators Modulate the Activity of a Silkmoth Chorion Gene during Choriogenesis, **230**, 151–160.

Chromatin
Negative Supercoiling and Nucleosome Cores. I. The Effect of Negative Supercoiling on the Efficiency of Nucleosome Core Formation *in Vitro*, **229**, 623–636.
On the Location of Histones H1 and H5 in the Chromatin Fiber. Studies with Immobilized Trypsin and Chymotrypsin, **229**, 917–929.
Reconstitution of Short-spaced Chromatin from the Histone Octamer and either HMG-14,17 or Histone H1, **230**, 824–836.
Structural and Functional Requirements for the Chromatin Transition at the *PHO5* Promoter in *Saccharomyces cerevisiae* upon *PHO5* Activation, **231**, 658–667.
Basal Promoter and Enhancer Element of Yeast U6 snRNA Gene, **233**, 644–658.

Effect of Positive Supercoiling on DNA Compaction by Nucleosome Cores, **234**, 297–301.

Chromatin active
Structural and Functional Requirements for the Chromatin Transition at the *PHO5* Promoter in *Saccharomyces cerevisiae* upon *PHO5* Activation, **231**, 658–667.

Chromatin HMG-14,17
Reconstitution of Short-spaced Chromatin from the Histone Octamer and either HMG-14,17 or Histone H1, **230**, 824–836.

Chromatin reconstitution
Structure of Nucleosomal DNA at High Salt Concentration as Probed by Hydroxyl Radical, **229**, 827–832.

Chromatin structure
On the Location of Histones H1 and H5 in the Chromatin Fiber. Studies with Immobilized Trypsin and Chymotrypsin, **229**, 917–929.

Chromatium vinosum
Atomic Structure of a Cytochrome *c'* with an Unusual Ligand-controlled Dimer Dissociation at 1·8 Å Resolution, **234**, 433–445.

Chromomycin
Nuclear Magnetic Resonance Comparison of the Binding Sites of Mithramycin and Chromomycin on the Self-complementary Oligonucleotide $d(ACCCGGGT)_2$. Evidence that the Saccharide Chains have a role in Sequence Specificity, **231**, 753–767.

Chromosomal origin
Replicatively Active Complexes of DnaA Protein and the *Escherichia coli* Chromosomal Origin Observed in the Electron Microscope, **233**, 16–24.

Chromosome structure
The Gene Clusters ARC and COR on Chromosomes 5 and 10, Respectively, of *Saccharomyces cerevisiae* Share a Common Ancestry, **233**, 372–388.

Ciliate mating types
Nuclear Magnetic Resonance Solution Structure of the Pheromone Er-10 from the Ciliated Protozoan *Euplotes raikovi*, **231**, 800–816.

Ciliate pheromones
Nuclear Magnetic Resonance Solution Structure of the Pheromone Er-10 from the Ciliated Protozoan *Euplotes raikovi*, **231**, 800–816.

Circular dichroism
Conformational and Nucleic Acid Binding Studies on the Synthetic Nucleocapsid Protein of HIV-1, **229**, 94–104.
Structural Deviations at CpG Provide a Plausible Explanation for the High Frequency of Mutation at This Site. Phosphorus Nuclear Magnetic Resonance and Circular Dichroism Studies, **230**, 373–378.
Purification, Circular Dichroism Analysis, Crystallization and Primary X-ray Diffraction Analysis of the F Plasmid CcdB Killer Protein, **231**, 513–515.
Structural Polymorphism of $d(GA{\cdot}TC)_n$ DNA Sequences. Intramolecular and Intermolecular Associations of the Individual Strands, **233**, 671–681.

Citrate synthase
Crystallization and Preliminary Crystallographic Study of Citrate Synthase from the Thermophilic Archaeon *Thermoplasma acidophilum*, **232**, 308–309.

Citric acid cycle
Purification and Crystallization of Fumarase C from *Escherichia coli*, **231**, 141–144.
Crystal Structure of a Ternary Complex of *Escherichia coli* Malate Dehydrogenase Citrate and NAD at 1·9 Å Resolution, **232**, 213–222.

Clostridium cellulolyticum
Crystallization and Preliminary X-ray Analysis of the Catalytic Domain of Endoglucanase from *Clostridium cellulolyticum*, **233**, 325–327.

Codon
Growth-rate-dependent Accumulation of Twelve tRNA Species in *Escherichia coli*, **230**, 483–491.
UGA Codon Context Which Spans Three Codons. Reversal by ms^2i^6A37 in tRNA, Mutation in *rpsD*(S4) or Streptomycin, **232**, 1017–1029.

Codon UAG
The 3′ Codon Context Effect on UAG Suppressor tRNA is Different in *Escherichia coli* and Human Cells, **233**, 1–6.

Codon unassigned
Unassigned or Nonsense Codons in *Micrococcus luteus*, **230**, 51–56.

Coenzyme
Structural Differences between Wild-type NADP-dependent Glutathione Reductase from *Escherichia coli* and a Redesigned NAD-dependent Mutant, **231**, 191–195.
Role of an Active Site Residue Analyzed by Combination of Mutagenesis and Coenzyme Analog, **234**, 1218–1229.

Coiled coil
A Myosin-like Protein from a Higher Plant, **231**, 148–154.
Ionic Interactions in the Coiled-coil Domain of Laminin Determine the Specificity of Chain Assembly, **231**, 311–323.
Sequence and Structure of a New Coiled Coil Protein from a Microtubule Bundle in *Giardia*, **231**, 521–530.

Colicin
Fluorescence Energy Transfer Distance Measurements. The Hydrophobic Helical Hairpin of Colicin A in the Membrane Bound State, **230**, 1055–1067.
The Orientation of Porin OmpF in the Outer Membrane of *Escherichia coli*, **233**, 400–413.

Collagen
Left-handed Polyproline II Helices Commonly Occur in Globular Proteins, **229**, 472–493.
The *in Vivo* Glycation of Diabetic Tendon Collagen Studied by Neutron Diffraction, **230**, 1297–1303.
Thermodynamic Studies of the Collagen-like Region of Human Subcomponent C1q. A Water-containing Structural Model, **234**, 654–660.

Combinatorial libraries
Molecular Profile of an Antibody Response to HIV-1 as Probed by Combinatorial Libraries, **230**, 812–823.

Combinatorial search
Modeling Side-chain Conformation for Homologous Proteins Using. an Energy-based Rotamer Search, **229**, 996–1006.

Compensatory mutations
Mapping the Stability Determinants of Bacterial Tyrosyl Transfer RNA Synthetases by an Experimental Evolutionary Approach, **234**, 209–221.

Competitiveness genes
Nucleotide Sequence and Characterization of *Rhizobium meliloti* Nodulation Competitiveness Genes *nfe*, **229**, 570–576.

Complement
Solution Structure of a Pair of Complement Modules by Nuclear Magnetic Resonance, **232**, 268–284.

Complex I
The Gene Locus of the Proton-translocating NADH : Ubiquinone Oxidoreductase in *Escherichia coli*. Organization of the 14 Genes and Relationship Between the Derived Proteins and Subunits of Mitochondrial Complex I, **233**, 109–122.

Complex relaxation matrix analysis
Molecular Dynamics with Weighted Time-averaged Restraints for a DNA Octamer. Dynamic Interpretation of Nuclear Magnetic Resonance Data, **234**, 373–389.

Complex structure
Refined 1·6 Å Resolution Crystal Structure of the Complex Formed between Porcine β-Trypsin and MCTI-A, a Trypsin Inhibitor of the Squash Family. Detailed Comparison with Bovine β-Trypsin and Its Complex, **229**, 1022–1036.
Crystals of the Phenylalanyl-tRNA Synthetase from *Thermus thermophilus* HB8 Complexed with $tRNA^{Phe}$, **231**, 927–929.
Preliminary Crystallographic Study of a Complex Between an Fab of a Monoclonal Feline Peritonitis Virus Neutralizing Antibody and Its Anti-Idiotypic Fab, **234**, 894–896.

Computer analysis
Analysis of Mutations Occurring at the Human *hprt* Locus, **231**, 41–57.
Prediction of Protein Structure by Evaluation of Sequence-structure Fitness. Aligning Sequences to Contact Profiles Derived from Three-dimensional Structures, **232**, 805–825.
Structural Analysis by Energy Dot Plot of a Large mRNA, **233**, 261–269.
Rules that Govern tRNA Identity in Protein Synthesis, **234**, 257–280.
Computing the Structure of Bound Peptides. Application to Antigen Recognition by Class I Major Histocompatibility Complex Receptors, **234**, 515–521.
Detecting Frame Shifts by Amino Acid Sequence Comparison, **234**, 1140–1157.

Conformation
Conformational Filtering in Polypeptides and Proteins, **229**, 125–145.
Fragment Ranking in Modelling of Protein Structure. Conformationally Constrained Environmental Amino Acid Substitution Tables, **229**, 194–220.
Domain Closure in Adenylate Kinase. Joints on Either Side of Two Helices Close Like Neighboring Fingers, **229**, 494–501.
Metal-induced Conformational Changes in Transferrins, **229**, 585–590.
Modeling the Three-dimensional Structure of RNA Using Discrete Nucleotide Conformational Sets, **229**, 1049–1064.
Backbone-dependent Rotamer Library for Proteins. Application to Side-chain Prediction, **230**, 543–574.
Structure Determination of Antiviral Compound SCH 38057 Complexed with Human Rhinovirus 14, **230**, 857–867.
Two-dimensional ^1H Nuclear Magnetic Resonance Studies of the Half-saturated $(Ca^{2+})_1$ State of Calbindin D_{9k}. Further Implications for the Molecular Basis of Cooperative Ca^{2+} binding, **231**, 415–430.
Crystallographic Binding Studies on the Allosteric Inhibitor Glucose-6-Phosphate to T State Glycogen Phosphorylase b, **232**, 253–267.
Investigations of Ligand Association and Dissociation Rates in the "Open" and "Closed" States of Myoglobin, **233**, 155–166.
The Canine Parvovirus Empty Capsid Structure, **233**, 231–244.
Domain Closure in Lactoferrin. Two Hinges Produce a See-saw Motion Between Alternative Close-packed Interfaces, **234**, 357–372.
Conformational Flexibility in Glutamate Dehydrogenase. Role of Water in Substrate Recognition and Catalysis, **234**, 1131–1139.

Conformation rRNA
Erythromycin Binding is Reduced in Ribosomes with Conformational Alterations in the 23 S rRNA Peptidyl Transferase Loop, **232**, 725–731.

Connective tissue diseases
Crystallization and Preliminary X-ray Analysis of a Truncated Tissue Metalloproteinase Inhibitor $\Delta_{128\ 194}$ TIMP-2, **229**, 1163–1164.

Co-operativity
Lrp, a Global Regulatory Protein of *Escherichia coli*, Binds Co-operatively to Multiple Sites and Activates Transcription of *ilvIH*, **229**, 306–318.
Functional Interactions among the His40, Glu58 and His92 Catalysts of Ribonuclease T_1 as Studied by Double and Triple Mutants, **229**, 770–781.
Highly Cooperative DNA Binding by the Coliphage HK022 Repressor, **230**, 1108–1130.
Mutation Ala2 → Ser Destabilizes Intersubunit Interactions in the Molecular Chaperone GroEL, **231**, 58–64.
Two-dimensional ^1H Nuclear Magnetic Resonance Studies of the Half-saturated $(Ca^{2+})_1$ State of Calbindin D_{9k}. Further Implications for the Molecular Basis of Cooperative Ca^{2+} binding, **231**, 415–430.
Step-wise Mutation of Barnase to Binase. A Procedure for Engineering Increased Stability of Proteins and an Experimental Analysis of the Evolution of Protein Stability, **233**, 305–312.
Cocrystals of *Escherichia coli trp* Repressor Bound to an Alternative Operator DNA Sequence, **234**, 496–498.

Copper protein
Crystallization and Preliminary Crystallographic Characterization of the Copper-containing Amine Oxidase from Pea Seedlings, **229**, 243–245.

Coprinus cinereus
Crystallization and X-ray Diffraction Analysis of Recombinant *Coprinus cinereus* Peroxidase, **232**, 989–991.

cos
Function of IHF in λ DNA Packaging. I. Identification of the Strong Binding Site for Integration Host Factor and the Locus for Intrinsic Bending in *cosB*, **230**, 492–504.
Function of IHF in λ DNA Packaging. II. Effects of Mutations Altering the IHF Binding Site and the Intrinsic Bend in *cosB* on λ Development, **230**, 505–515.
The Role of *cosB*, the Binding Site for Terminase, the DNA Packaging Enzyme of Bacteriophage λ, in the Nicking Reaction, **234**, 594–609.

Coxsackievirus
Preliminary Crystallographic Analysis of Coxsackievirus A9, **230**, 667–669.

CRBP
Crystallographic Studies on a Family of Cellular Lipophilic Transport Proteins. Refinement of P2 Myelin Protein and the Structure Determination and Refinement of Cellular Retinol-binding Protein in Complex with All-*trans*-retinol, **230**, 1225–1246.
Crystal Structures of Holo and Apo-cellular Retinol-binding Protein II, **230**, 1247–1259.

Cre
Precise Deletions in Large Bacterial Genomes by Vector-mediated Excision (VEX). The *trfA* Gene of Promiscuous Plasmid RK2 is Essential for Replication in Several Gram-negative Hosts, **230**, 174–185.

Cro
The Bacteriophage 434 Right Operator. Roles of O_R1, O_R2 and O_R3, **230**, 28–40.

Crotin II
Preliminary Crystallographic Studies of Crotin II, **234**, 908–909.

CRP
A Regulatory Cascade in the Induction of *rhaBAD*, **234**, 87–98.

Cryo-electron microscopy
Domain Organization of the Subunit of the *Salmonella typhimurium* Flagellar Hook, **229**, 79–84.
Imaging Frozen, Hydrated Acrosomal Bundle from *Limulus* Sperm at 7 Å Resolution with a 400 kV Electron Cryomicroscope, **230**, 384–386.
Structure of the Herpes Simplex Virus Capsid. Molecular Composition of the Pentons and the Triplexes, **232**, 499–511.

Three-dimensional Architecture of Human α2-Macroglobulin Transformed with Methylamine, **232**, 522–529.
Projection Structure of Halorhodopsin from *Halobacterium halobium* at 6 Å Resolution Obtained by Electron Cryo-microscopy, **234**, 837–846.
Three-dimensional Transformation of Capsids Associated with Genome Packaging in a Bacterial Virus, **231**, 65–74.

Crystal structure

Structure of *Sesbania* Mosaic Virus at 4·7 Å Resolution and Partial Sequence of the Coat Protein, **229**, 20–25.
Crystal Structure of Glucose Oxidase from *Aspergillus* niger Refined at 2·3 Å Resolution, **229**, 153–172.
Crystal Structure of an Endochitinase from *Hordeum vulgare* L. Seeds, **229**, 189–193.
Crystallization and Preliminary X-ray Crystallographic Analysis of α-Amylase from *Bacillus subtilis*, **229**, 235–238.
Crystallization and Preliminary X-ray Analysis of the Catalytic Domain of Xylanase A from *Pseudomonas fluorescens* subspecies *cellulosa*, **229**, 246–248.
Crystallization and Preliminary X-ray Analysis of Human Antithrombin III, **229**, 249–250.
Structure of a Sarcoplasmic Calcium-binding Protein from Amphioxus Refined at 2·4 Å Resolution, **229**, 461–471.
Crystallization of Pancreatic Procolipase and of its Complex with Pancreatic Lipase, **229**, 552–554.
Crystallization and Preliminary X-ray Diffraction Studies of β-Cryptogein, a Toxic Elicitin Secreted by the Phytopathogenic Fungus *Phytophthora cryptogea*, **229**, 564–565.
Conformation of Complementarity Determining Region L1 Loop in Murine IgG λ Light Chain Extends the Repertoire of Canonical Forms, **229**, 597–601.
Preliminary Investigation of Crystals of Lipase I from *Rhizopus niveus*, **229**, 785–786.
Refined 1·8 Å X-ray Crystal Structure of Astacin, a Zinc-endopeptidase from the Crayfish *Astacus astacus* L. Structure Determination, Refinement, Molecular Structure and Comparison with Thermolysin, **229**, 945–968.
X-ray Structures of the Antigen-Binding Domains from Three Variants of Humanized anti-p185^{HER2} Antibody 4D5 and Comparison with Molecular Modeling, **229**, 969–995.
X-ray Analysis and Spectroscopic Characterization of M121Q Azurin. A Copper Site Model for Stellacyanin, **229**, 1007–1021.
Refined 1·6 Å Resolution Crystal Structure of the Complex Formed between Porcine β-Trypsin and MCTI-A, a Trypsin Inhibitor of the Squash Family. Detailed Comparison with Bovine β-Trypsin and Its Complex, **229**, 1022–1036.
Three-dimensional Structure of the Glutathione Synthetase from *Escherichia coli* B at 2·0 Å Resolution, **229**, 1083–1100.
Crystals of Phospholipase A_2 Inhibitor. The Non-toxic Component of Vipoxin from the Venom of Bulgarian Viper (*Vipera ammodytes*), **229**, 1147–1149.
Crystallization and Preliminary X-ray Crystallographic Analysis of the Protease Inhibitor Ecotin, **229**, 1157–1158.
Molecular Basis of Allosteric Activation of Bacterial L-Lactate Dehydrogenase, **230**, 21–27.
Refined Structure of Sindbis Virus Core Protein and Comparison with Other Chymotrypsin-like Serine Proteinase Structures, **230**, 228–247.
Atomic Resolution (0·83 Å) Crystal Structure of the Hydrophobic Protein Crambin at 130 K, **230**, 292–311.
Crystallization and Preliminary X-ray Studies of Influenza A Virus Neuraminidase of Subtypes N5, N6, N8 and N9, **230**, 345–348.
Structural Studies of the Enveloped dsRNA Bacteriophage φ6 of *Pseudomonas syringae* by Raman Spectroscopy. I. The Virion and Its Membrane Envelope, **230**, 461–472.
Structural Studies of the Enveloped dsRNA Bacteriophage φ6 of *Pseudomonas syringae* by Raman Spectroscopy. II. Nucleocapsid Structure and Thermostability of the Virion, Nucleocapsid and Polymerase Complex, **230**, 473–482.
Refined Structure of the Pyruvoyl-dependent Histidine Decarboxylase from *Lactobacillus* 30a, **230**, 516–528.
Crystal Structure of Ribonuclease H from *Thermus thermophilus* HB8 Refined at 2·8 Å Resolution, **230**, 529–542.
1·8 Å Refined Structure of the Lipase from *Geotrichum candidum*, **230**, 575–591.
Rotamers: To be or not to be? An Analysis of Amino Acid Side-chain Conformations in Globular Proteins, **230**, 592–612.
Crystal Structure of the Trigonal Form of Human Plasma Retinol-binding Protein at 2·5 Å Resolution, **230**, 613–624.
Crystallization and Preliminary X-ray Analysis of a Thermophillic *Bacillus* Xylanase, **230**, 664–666.
Preliminary Crystallographic Analysis of Coxsackievirus A9, **230**, 667–669.
Crystallization and Preliminary Crystallographic Analysis of a Tetrameric Isolectin from *Vicia villosa*, Specific for the Tn Antigen, **230**, 670–672.
Crystallographic Characterization of Tetanus Toxin Fragment C, **230**, 673–674.
Re-refinement of the X-Ray Crystal Structure of Bovine Lens Leucine Aminopeptidase Complexed with Bestatin, **230**, 722–724.
Refined Structure of *Escherichia coli* Heat-labile Enterotoxin, a Close Relative of Cholera Toxin, **230**, 890–918.
Crystal Structures of Rat Anionic Trypsin Complexed with the Protein Inhibitors APPI and BPTI, **230**, 919–933.
Structures of the Lectin IV of *Griffonia simplicifolia* and its Complex with the Lewis b Human Blood Group Determinant at 2·0 Å Resolution, **230**, 950–965.
Crystal Structures of Ribonuclease F1 of *Fusarium moniliforme* in Its Free Form and in Complex with 2′GMP, **230**, 979–996.
X-ray Structures and Mechanistic Implications of Three Functional Derivatives of Ascorbate Oxidase from Zucchini. Reduced, Peroxide and Azide Forms, **230**, 997–1014.
Crystallization of *Bacillus subtilis* Tryptophanyl-tRNA Synthetase, **230**, 1089–1090.
Three-dimensional Structure of Lipoamide Dehydrogenase from *Pseudomonas fluorescens* at 2·8 Å Resolution. Analysis of Redox and Thermostability Properties, **230**, 1200–1215.
Refinement of Recombinant Oncomodulin at 1·30 Å Resolution, **230**, 1216–1224.
Primary Structure and Crystallization of Orotate Phosphoribosyltransferase from *Salmonella typhimurium*, **230**, 1304–1308.
Crystallization and Preliminary X-ray Studies of a Protease from *Pseudomonas aeruginosa*, **230**, 1315–1316.
Structural Differences between Wild-type NADP-dependent Glutathione Reductase from *Escherichia coli* and a Redesigned NAD-dependent Mutant, **231**, 191–195.
Three-dimensional Structure of Satellite Tobacco Mosaic Virus at 2·9 Å Resolution, **231**, 375–391.
High Resolution Crystal Structure of the *A*-DNA Decamer d(CCCGGCCGGG). Novel Intermolecular Base-paired G * (G·C) Triplets, **231**, 431–444.
Refined Crystal Structure of Human Transforming Growth Factor β2 at 1·95 Å Resolution, **231**, 445–458.
Three-dimensional Structure of the Tetragonal Crystal Form of Egg-white Avidin in its Functional Complex with Biotin at 2·7 Å Resolution, **231**, 698–710.

Structure and Molecular Model Refinement of Pig Pancreatic α-Amylase at 2·1 Å Resolution, **231**, 785–799.

The Crystal Structure of Tris-inhibited Phospholipase C from *Bacillus cereus* at 1·9 Å Resolution. The Nature of the Metal Ion in Site 2, **231**, 870–876.

Crystals of the Phenylalanyl-tRNA Synthetase from *Thermus thermophilus* HB8 Complexed with $tRNA^{Phe}$, **231**, 927–929.

Preliminary Crystallographic Analysis of Bovine Enterovirus, **231**, 930–932.

A DNA Dodecamer Containing an Adenine Tract Crystallizes in a Unique Lattice and Exhibits a New Bend, **231**, 1024–1039.

Structure and Function of the *Escherichia coli* Ribonucleotide Reductase Protein R2, **232**, 123–164.

Structure Determination and Refinement of Human Alpha Class Glutathione Transferase A1-1, and a Comparison with the Mu and Pi Class Enzymes, **232**, 192–212.

Crystal Structure of Cleaved Bovine Antithrombin III at 3·2 Å Resolution, **232**, 223–241.

Crystallization and Preliminary Crystallographic Study of Citrate Synthase from the Thermophilic Archaeon *Thermoplasma acidophilum*, **232**, 308–309.

Influence of Fluctuations on DNA Curvature. A Comparison of Flexible and Static Wedge Models of Intrinsically, **232**, 530–554.

Refined Structures of the Ligand-binding Domain of the Aspartate Receptor from *Salmonella typhimurium*, **232**, 555–573.

The Phage 434 O_R2/R1-69 Complex at 2·5 Å Resolution, **232**, 826–838.

Crystal Structure of a Porcine Pancreatic Phospholipase A_2 Mutant. A Large Conformational Change Caused by the F63V Point Mutation, **232**, 839–855.

Refined X-ray Structures of Haloalkane Dehalogenase at pH 6·2 and pH 8·2 and Implications for the Reaction Mechanism, **232**, 856–872.

Crystallization and Preliminary X-ray Diffraction Analysis of Crystals of *Thermoascus aurantiacus* Xylanase, **232**, 987–988.

Preliminary Crystallographic Studies on Scytalone Dehydratase from *Magnaporthe grisea*, **232**, 999–1002.

Crystallization of Bacteriophage fr and its Recombinant Capsids, **232**, 1005–1006.

Structure of the Recombinant N-Terminal Lobe of Human Lactoferrin at 2·0 Å Resolution, **232**, 1084–1100.

Refined Structures of Substrate-bound and Phosphate-bound Thymidylate Synthase from *Lactobacillus casei*, **232**, 1101–1116.

Crystal Structure of an Anticholera Toxin Peptide Complex at 2·3 Å, **232**, 1169–1175.

Crystallization of a 67 kDa Fragment of *Escherichia coli* DNA Topoisomerase I, **232**, 1213–1216.

Human Deoxyhaemoglobin-2,3-Diphosphoglycerate Complex Low-Salt Structure at 2·5 Å Resolution, **233**, 270–274.

Crystallization and Preliminary X-ray Analysis of Two Major Xylanases from *Trichoderma reesei*, **233**, 313–316.

Crystallization and Preliminary X-ray Analysis of the Catalytic Domain of Endoglucanase from *Clostridium cellulolyticum*, **233**, 325–327.

X-ray Crystal Structure of Ferric *Aplysia limacina* Myoglobin in Different Liganded States, **233**, 498–508.

Role of Arg115 in the Catalytic Action of Human Lysozyme. X-ray Structure of His115 and Glu115 Mutants, **233**, 524–535.

Crystallization and Preliminary X-ray Studies of Human Erythrocyte Acylpeptide Hydrolase, **233**, 546–549.

The 2·5 Å Structure of Pokeweed Antiviral Protein, **233**, 705–715.

The 1·7 Å Refined X-ray Structure of the Periplasmic Glucose/Galactose Receptor from *Salmonella typhi murium*, **233**, 739–752.

High-Resolution Crystal Structures of Distal Histidine Mutants of Sperm Whale Myoglobin, **234**, 140–155.

Structure of a Phosphonate-inhibited β-Lactamase. An Analog of the Tetrahedral Transition State/Intermediate of β-Lactam Hydrolysis, **234**, 165–178.

Crystal Structure of Phospholipase C from *Bacillus cereus* Complexed with a Substrate Analog, **234**, 179–187.

Refined Crystal Structure of the Seryl-tRNA Synthetase from *Thermus thermophilus* at 2·5 Å Resolution, **234**, 222–233.

Two Crystal Structures of a Potently Sweet Protein. Natural Monellin at 2·75 Å Resolution and Single-Chain Monellin at 1·7 Å Resolution, **234**, 390–404.

Atomic Structure of a Cytochrome *c'* with an Unusual Ligand-controlled Dimer Dissociation at 1·8 Å Resolution, **234**, 433–445.

Crystallization of Old Yellow Enzyme Illustrates an Effective Strategy for Increasing Protein Crystal Size, **234**, 502–507.

Computing the Structure of Bound Peptides. Application to Antigen Recognition by Class I Major Histocompatibility Complex Receptors, **234**, 515–521.

The Refined Structure of Bacteriophage MS2 at 2·8 Å Resolution, **234**, 620–639.

Crystallographic Refinement of Bowman-Birk Type Protease Inhibitor A-II from Peanut (*Arachis hypogaea*) at 2·3 Å Resolution, **234**, 722–734.

Refinement and Analysis of the Structure of the First Two Domains of Human CD4, **234**, 763–778.

The Crystal Structure of a New High-calcium Form of Annexin V, **234**, 816–825.

Preliminary X-ray Crystallographic Study of the Proteasome from *Thermoplasma acidophilum*, **234**, 881–884.

Crystallization and Preliminary X-ray Studies on the Core Proteins of Cellobiohydrolase I and Endoglucanase I from *Trichoderma reesei*, **234**, 905–907.

Conformational Variability of Chicken Cystatin. Comparison of Structures Determined by X-ray Diffraction and NMR Spectroscopy, **234**, 1060–1069.

Detailed Analysis of the Free and Bound Conformations of an Antibody. X-ray Structures of Fab 17/9 and Three Different Fab-peptide Complexes, **234**, 1098–1118.

X-ray Structure of a Monomeric Cyclophilin A-Cyclosporin A Crystal Complex at 2·1 Å Resolution, **234**, 1119–1130.

Contribution of Buried Hydrogen Bonds to Protein Stability. The Crystal Structures of Two Barnase Mutants, **234**, 1158–1170.

Crystal Structure of *Myxococcus xanthus* Nucleoside Diphosphate Kinase and its Interaction with a Nucleotide Substrate at 2·0 Resolution, **234**, 1230–1247.

Preliminary Crystallization and X-ray Analysis of Orthorhombic Human Endothelin, **234**, 1250–1252.

Crystallization and Preliminary X-ray Analysis of γ-Glutamyltranspeptidase from *Escherichia coli* K-12, **234**, 1259–1262.

Crystallization and Preliminary X-ray Analysis of Human Tissue Factor Extracellular Domain, **234**, 1263–1265.

Crystal two-dimensional

Two-dimensional Crystals of the Molecular Chaperone GroEL Reveal Structural Plasticity, **229**, 579–584.

Projection Image of Smooth Muscle α-Actinin from Two Dimensional Crystals Formed on Positively Charged Lipid Layers, **230**, 196–205.

Crystallin
An Avian αB-Crystallin. Non-lens Expression and Sequence Similarities with both Small (HSP27) and Large (HSP70) Heat Shock Proteins, **232**, 1221–1226.

ε-crystallin
Duck Lactate Dehydrogenase B/ε-Crystallin Gene. Lens Recruitment of a GC-promoter, **229**, 849–859.

Crystallization
Structure of *Sesbania* Mosaic Virus at 4·7 Å Resolution and Partial Sequence of the Coat Protein, **229**, 20–25.
Crystal Structure of an Endochitinase from *Hordeum vulgare* L. Seeds, **229**, 189–193.
Crystallization and Preliminary X-ray Crystallographic Analysis of α-Amylase from *Bacillus subtilis*, **229**, 235–238.
Purification, Crystallization and Space Group Determination of DNA Repair Enzyme Exonuclease III from *E. coli*, **229**, 239–242.
Crystallization and Preliminary Crystallographic Characterization of the Copper-containing Amine Oxidase from Pea Seedlings, **229**, 243–245.
Crystallization and Preliminary X-ray Analysis of the Catalytic Domain of Xylanase A from *Pseudomonas fluorescens* subspecies *cellulosa*, **229**, 246–248.
Crystallization and Preliminary X-ray Analysis of Human Antithrombin III, **229**, 249–250.
Crystallization of the C-terminal Domain of Rabbit Serum Hemopexin, **229**, 251–252.
Preliminary Crystallographic Analysis of Sweet Potato Beta Amylase, **229**, 253–254.
Crystallization and Preliminary X-ray Crystallographic Analysis of Probable Amylase/Protease Inhibitor-B from Rice Seeds, **229**, 255–257.
Crystallization and Preliminary X-ray Diffraction Analysis of ScrY, a Specific Bacterial Outer Membrane Porin, **229**, 258–262.
X-rays Destroy the Lamellar Structure of Model Membranes, **229**, 291–294.
Structure of a Sarcoplasmic Calcium-binding Protein from Amphioxus Refined at 2·4 Å Resolution, **229**, 461–471.
Freeze-fracture Electron Microscope Study of Lipid Systems. The Cubic Phase of Space Group *Pm*3n, **229**, 526–539.
Crystallization and Preliminary Crystallographic Analysis of a TNF-β–55 kDa TNF Receptor Complex, **229**, 555–557.
Crystallization and Preliminary X-ray Studies of the Basic Lectin from Winged Bean (*Psophocarpus tetragonolobus*), **229**, 558–560.
Crystallographic Characterization of a PH04–DNA Complex, **229**, 566–569.
Preliminary Investigation of Crystals of Lipase I from *Rhizopus niveus*, **229**, 785–786.
Crystallization of F_1-ATPase from Bovine Heart Mitochondria, **229**, 787–790.
Crystallization and Preliminary Crystallographic Analysis of the Cyanogenic β-Glucosidase from the White Clover *Trifolium repens* L., **229**, 791–793.
Crystallization and Preliminary X-ray Analysis of the Periplasmic Fragment of CyoA–a Subunit of the *Escherichia coli* Cytochrome *o* Complex, **229**, 794–796.
Crystals of Phospholipase A_2 Inhibitor. The Non-toxic Component of Vipoxin from the Venom of Bulgarian Viper (*Vipera ammodytes*), **229**, 1147–1149.
Crystallization and Preliminary X-ray Diffraction Studies of Recombinant Human Interleukin-5, **229**, 1150–1152.
Crystallization and Preliminary Crystallographic Data for Formyltetrahydrofolate Synthetase from *Clostridium thermoaceticum*, **229**, 1153–1156.
Crystallization and Preliminary X-ray Crystallographic Analysis of the Protease Inhibitor Ecotin, **229**, 1157–1158.
Formation *in Vivo*, Purification and Crystallization of a Complex of the γ and ε Subunits of the F_0F_1-ATPase of *Escherichia coli*, **229**, 1159–1162.
Crystallization and Preliminary X-ray Analysis of a Truncated Tissue Metalloproteinase Inhibitor $\Delta_{128\ 194}$ TIMP-2, **229**, 1163–1164.
X-ray Analyses of Aspartic Proteinases. V. Structure and Refinement at 2·0 Å Resolution of the Aspartic Proteinase from *Mucor pusillus*, **230**, 260–283.
Crystallization and Preliminary Crystallographic Analysis of *Streptomyces griseus* Aminopeptidase, **230**, 342–344.
Crystallization and Preliminary X-ray Studies of Influenza A Virus Neuraminidase of Subtypes N5, N6, N8 and N9, **230**, 345–348.
Crystallization of the Major Coat Protein of PRD1, a Bacteriophage with an Internal Membrane, **230**, 349–352.
Crystal Parameters of an Alcohol Dehydrogenase from the Extreme Thermophile *Thermoanaerobium brockii*, **230**, 353–355.
Crystals of β-Xylanase from *Aspergillus oryzae*, **230**, 661–663.
Crystallization and Preliminary X-ray Analysis of a Thermophillic *Bacillus* Xylanase, **230**, 664–666.
Preliminary Crystallographic Analysis of Coxsackievirus A9, **230**, 667–669.
Crystallization and Preliminary Crystallographic Analysis of a Tetrameric Isolectin from *Vicia villosa*, Specific for the Tn Antigen, **230**, 670–672.
Crystallographic Characterization of Tetanus Toxin Fragment C, **230**, 673–674.
Crystallization of the Maltodextrin-binding Protein for Active Transport and Chemotaxis in Several Different Liganded and Mutant Forms, **230**, 675–678.
Preliminary Crystallographic Data for *Pneumocystis carinii* Dihydrofolate Reductase, **230**, 679–680.
Preliminary X-ray Study of Naproxen Esterase from *Bacillus subtilis*, **230**, 681–683.
Structure Determination of Antiviral Compound SCH 38057 Complexed with Human Rhinovirus 14, **230**, 857–867.
Interactions between Morpholinyl Anthracyclines and DNA. The Crystal Structure of a Morpholino Doxorubicin Bound to d(CGTACG), **230**, 878–889.
Crystallization and Stoichiometry of Binding of a Complex between a Rat Intestinal Fc Receptor and Fc, **230**, 1077–1083.
Isolation, Crystallization and Preliminary Diffraction Analyses of Human Pancreatic α-Amylase, **230**, 1084–1085.
Crystallization and Preliminary X-ray Diffraction Studies of a NADH Oxidase from *Thermus thermophilus* HB8, **230**, 1086–1088.
Crystallization of *Bacillus subtilis* Tryptophanyl-tRNA Synthetase, **230**, 1089–1090.
Crystallization of a Deletion Mutant of the R-subunit of cAMP Dependent Protein Kinase, **230**, 1091–1093.
Diffraction Grade Crystals of *Escherichia coli* Serine Hydroxymethyltransferase, **230**, 1094–1096.
Crystallization of DsbA, an *Escherichia coli* Protein Required for Disulphide Bond Formation *in Vivo*, **230**, 1097–1100.
A Mutagenic Study of the Allosteric Linkage of His(HC3)146β in Haemoglobin, **230**, 1291–1296.
Primary Structure and Crystallization of Orotate Phosphoribosyltransferase from *Salmonella typhimurium*, **230**, 1304–1308.
Crystals of Protein L30 from the 50 S Ribosomal Subunit of *Thermus thermophilus*. Preliminary Crystallographic Data, **230**, 1309–1310.
New Crystal Form of the Photosynthetic Reaction Centre from *Rhodobacter sphaeroides* of Improved Diffraction Quality, **230**, 1311–1314.
Crystallization and Preliminary X-ray Studies of a Protease from *Pseudomonas aeruginosa*, **230**, 1315–1316.
Purification and Crystallization of Human Cyclin-dependent Kinase 2, **230**, 1317–1319.
Preliminary Crystallographic Analysis of a Fab Specific for the O-antigen of *Shigella flexneri* Cell Surface

Lipopolysaccharide with and without Bound Saccharides, **231**, 133–136.
Crystallization and Preliminary X-ray Analysis of Porcine Ribonuclease Inhibitor, a Protein with Leucine-rich Repeats, **231**, 137–140.
Three-dimensional Structure of Satellite Tobacco Mosaic Virus at 2·9 Å Resolution, **231**, 375–391.
Crystallization and Preliminary X-ray Analysis of Vipoxin, a Complex between a Toxic Phospholipase A_2 and its Natural Polypeptide Inhibitor, **231**, 498–500.
Crystallization of Porcine Liver Ribonuclease Inhibitor a Member of the Family of Leucine-rich Repeats Containing Proteins, **231**, 505–508.
Preliminary Analysis of Crystals of 4-Oxalocrotonate Tautomerase, an Enzyme Composed of Unusually Small Monomers, **231**, 509–512.
Purification, Circular Dichroism Analysis, Crystallization and Primary X-ray Diffraction Analysis of the F Plasmid CcdB Killer Protein, **231**, 513–515.
An X-ray Diffraction Study of Frog Skeletal Muscle during Shortening Near the Maximum Velocity, **231**, 668–677.
Crystals of the Phenylalanyl-tRNA Synthetase from *Thermus thermophilus* HB8 Complexed with $tRNA^{Phe}$, **231**, 927–929.
Preliminary Crystallographic Analysis of Bovine Enterovirus, **231**, 930–932.
Crystallization of α-Galactosidase from *Trichoderma reesei*, **231**, 933–934.
Crystallization and Preliminary Crystallographic Analysis of *Escherichia coli* DNA Photolyase, **231**, 1122–1125.
Crystallization and Preliminary X-ray Diffraction Studies of Theiler's Virus (GDVII strain), **231**, 1126–1129.
Crystallization and Preliminary Crystallographic Analysis of Antistasin, a Leech-derived Inhibitor of Blood Coagulation Factor Xa, **231**, 1137–1138.
Crystallization and Preliminary X-ray Investigation of Recombinant Simian Immunodeficiency Virus Proteinase, **231**, 1139–1142.
The MotA Protein from Bacteriophage T4 Contains Two Domains. Prelimiary Structural Analysis by X-ray Diffraction and Nuclear Magnetic Resonance, **232**, 301–304.
Crystallization and Preliminary X-ray Data of Chloromuconate Cycloisomerase from *Alcaligenes eutrophus* JMP134 (pJP4), **232**, 305–307.
Crystallization of a Complex between an Elastase-specific Inhibitor Elafin and Porcine Pancreatic Elastase, **232**, 310–311.
Purification, Crystallization and Preliminary X-ray Analysis of Inorganic Pyrophosphatase from *Thermus thermophilus*, **232**, 312–313.
Crystallization and Preliminary Crystallographic Characterization of Aspartic Proteinase-A from Baker's Yeast and Its Complexes with Inhibitors, **232**, 701–703.
Purification and Crystallization of Shiga Toxin from *Shigella dysenteriae*, **232**, 704–706.
Crystallization and Preliminary X-ray Diffraction Analysis of Crystals of *Thermoascus aurantiacus* Xylanase, **232**, 987–988.
Crystallization and X-ray Diffraction Analysis of Recombinant *Coprinus cinereus* Peroxidase, **232**, 989–991.
Preliminary Crystallographic Study of Cyclohexadienyl Dehydratase from *Pseudomonas aeruginosa*, **232**, 992–994.
Crystallization of a Chitosanase from *Streptomyces* N174, **232**, 995–996.
A Toxin that Recognizes Muscarinic Acetylcholine Receptors. Perparation and Characterization of Crystals Suitable for Structural Analysis, **232**, 997–998.
Crystallization of Barley (1-3,1-4)-β-glucanase, Isoenzyme II, **232**, 1003–1004.
Crystallization of Bacteriophage fr and its Recombinant Capsids, **232**, 1005–1006.
Crystallization of a Genetically Engineered Water-soluble Primary Penicillin Target Enzyme. The High Molecular Mass PBP2x of *Streptococcus pneumoniae*, **232**, 1007–1009.
Crystallization and Preliminary X-ray Analysis of the Di-Haem Cytochrome *c* Peroxidase from *Pseudomonas aeruginosa*, **232**, 1208–1210.
Crystallization of a 67 kDa Fragment of *Escherichia coli* DNA Topoisomerase I, **232**, 1213–1216.
Trypanosoma cruzi Trypanothione Reductase. Crystallization, Unit Cell Dimensions and Structure Solution, **232**, 1217–1220.
Crystallization and Preliminary X-ray Diffraction Studies of Photolyase (Photoreactivating Enzyme) from the Cyanobacterium *Anacystis nidulans*, **233**, 167–169.
Crystallization and Preliminary X-ray Analysis of a Microbial Superantigen Staphylococcal Enterotoxin C2, **233**, 170–172.
Crystallization and Preliminary Crystallographic Studies of Human β-Glucuronidase, **233**, 173–176.
Crystallization and Preliminary X-ray Crystallographic Analysis of the Soybean Proglycinin Expressed in *Escherichia coli*, **233**, 177–178.
Preliminary Crystallographic Studies on the D15 5′ to 3′ Exonuclease from Phage T5, **233**, 179–182.
Crystallization and Preliminary X-ray Analysis of Two Major Xylanases from *Trichoderma reesei*, **233**, 313–316.
Preliminary Crystallographic Study of 6-Phosphogluconate Dehydrogenase from *Trypanosoma brucei*, **233**, 317–321.
Crystallization and Preliminary X-ray Analysis of the Catalytic Domain of Endoglucanase from *Clostridium cellulolyticum*, **233**, 325–327.
Role of Arg115 in the Catalytic Action of Human Lysozyme. X-ray Structure of His115 and Glu115 Mutants, **233**, 524–535.
Crystallization and Preliminary X-ray Studies of Human Erythrocyte Acylpeptide Hydrolase, **233**, 546–549.
Crystallization and Preliminary X-ray Studies of Extracellular Signal-regulated Kinase-2/MAP Kinase with an Incorporated His-tag, **233**, 550–552.
Crystallization and Preliminary X-ray Diffraction Analysis of the Human Dimeric S-Lac Lectin (L-14-II), **233**, 553–555.
Preliminary Crystallographic Study of D(−)-Mandelate Dehydrogenase from *Rhodotorula graminis*, **233**, 781–783.
Crystallization and Preliminary Crystallographic Investigations of the Soluble Glucose Dehydrogenase from *Acinetobacter calcoaceticus*, **233**, 784–786.
Crystallization and Preliminary X-ray Diffraction Studies of *Bacillus stearothermophilus* Farnesyl Diphosphate Synthase Expressed in *Escherichia Coli*, **233**, 787–788.
Orthorhombic Crystal Form of Bacteriorhodopsin Nucleated on Benzamidine Diffracting to 3·6 Å Resolution, **234**, 156–164.
Crystal and Molecular Structure of d(CGTAGATCTACG) at 2·25 Å Resolution, **234**, 198–208.
Refined Crystal Structure of the Seryl-tRNA Synthetase from *Thermus thermophilus* at 2·5 Å Resolution, **234**, 222–233.
Crystallization and Preliminary X-ray Diffraction Analysis of the Complex of Human Placental 17β-Hydroxysteroid Dehydrogenase with $NADP^+$, **234**, 242–244.
Crystallization of Bovine Adrenodoxin Reductase in a New Unit Cell and Its Crystallographic Characterization, **234**, 245–248.
Lipid-protein Interactions in Crystals of Plant Light-harvesting Complex, **234**, 347–356.
Stabilization of Protein Crystals by Electrostatic Interactions as Revealed by a Numerical Approach, **234**, 421–432.

Crystallization and Preliminary Crystallographic Characterization of Bacteriophage T4 Baseplate Protein Encoded by Gene 9, **234**, 493–495.
Preliminary X-ray Crystallographic Studies of Ribonuclease I from *Escherichia coli*, **234**, 499–501.
Projection Structure of Halorhodopsin from *Halobacterium halobium* at 6 Å Resolution Obtained by Electron Cryo-microscopy, **234**, 837–846.
Crystallization and X-ray Diffraction Study of Recombinant Platelet-derived Endothelial Cell Growth Factor, **234**, 879–880.
Crystallization and Preliminary X-ray Analysis of Papaya Mosaic Virus Coat Protein, **234**, 885–887.
Crystallization and Preliminary X-ray Analysis of (1,3)- and (1,3; 1,4)-β-*d*-Glucanases from Germinating Barley, **234**, 888–889.
Hepatitis A Virus 3C Proteinase: Some Properties, Crystallization and Preliminary Crystallographic Characterization, **234**, 890–893.
Preliminary Crystallographic Study of a Complex Between an Fab of a Monoclonal Feline Peritonitis Virus Neutralizing Antibody and Its Anti-Idiotypic Fab, **234**, 894–896.
Crystallization of Single-Chain Fv Proteins, **234**, 897–901.
Crystallization and Preliminary X-ray Studies on the Core Proteins of Cellobiohydrolase I and Endoglucanase I from *Trichoderma reesei*, **234**, 905 907.
Preliminary Crystallographic Studies of Crotin II, **234**, 908–909.
Crystallization and Preliminary X-ray Analysis of the Uracil-DNA Glycosylase DNA Repair Enzyme from Herpes Simplex Virus Type 1, **234**, 910–912.
Crystallization and Preliminary X-ray Studies of L-Aspartase from *Escherichia coli*, **234**, 1248–1249.
Crystallization and Preliminary X-ray Diffraction Analysis of Two Conformations of Intact Human Antithrombin, **234**, 1253–1258.
Crystallization and Preliminary X-ray Analysis of γ-Glutamyltranspeptidase from *Escherichia coli* K-12, **234**, 1259–1262.
Crystallization of Inhibited Aspartic Proteinase from *Candida albicans*, **234**, 1266–1269.
Crystallization of the NADP-dependent Glutamate Dehydrogenase from *Escherichia coli*, **234**, 1270–1273.
Crystallization and X-ray Analysis of a Multienzyme Complex Containing RUBISCO and RuBP, **234**, 1274–1278.
Crystallization of the Ribosome Inactivating Protein ML1 from *Viscum album* (Mistletoe) Complexed with β-D-Galactose, **234**, 1279–1281.
Crystallization and Preliminary X-ray Studies of Wild Type and Catalytic-site Mutant α-Amylase from *Bacillus subtilis*, **234**, 1282–1283.

Crystallographic binding study
Crystal Structure of the Complex between Human Carbonic Anhydrase II and the Aromatic Inhibitor 1,2,4-Triazole, **232**, 9–14.

Cubic phase
Cubic Phases of Lipid-containing Systems. A Translational Diffusion Study by Fluorescence Recovery After Photobleaching, **229**, 517–525.
Freeze-fracture Electron Microscope Study of Lipid Systems. The Cubic Phase of Space Group *Pm*3n, **229**, 526–539.

Curved DNA
DNA Tridimensional Context Affects the Reactivity of Eukaryotic DNA Topoisomerase I, **231**, 634–645.

Cyanobacteria
Molecular Cloning of a P-type ATPase Gene from the Cyanobacterium *Synechocystis* sp. PCC 6803. Homology to Eukaryotic Ca^{2+}-ATPases, **234**, 1284–1289.

Cyanogenic
Crystallization and Preliminary Crystallographic Analysis of the Cyanogenic β-Glucosidase from the White Clover *Trifolium repens* L., **229**, 791–793.

Cyclin
Purification and Crystallization of Human Cyclin-dependent Kinase 2, **230**, 1317–1319.
The Kin28 Protein Kinase is Associated with a Cyclin in *Saccharomyces cerevisiae*, **234**, 307–310.

Cyclohexadienyl dehydratase
Preliminary Crystallographic Study of Cyclohexadienyl Dehydratase from *Pseudomonas aeruginosa*, **232**, 992–994.

Cyclohexylalanine
The (*i*, *i*+4) Phe–His Interaction Studied in an Alanine-based α-Helix, **230**, 284–291.

Cycloisomerase
Crystallization and Preliminary X-ray Data of Chloromuconate Cycloisomerase from *Alcaligenes eutrophus* JMP134 (pJP4), **232**, 305–307.

Cyclophilin
A *Saccharomyces cerevisiae* Cyclophilin Resident in the Endoplasmic Reticulum, **233**, 183–188.
X-ray Structure of a Monomeric Cyclophilin A-Cyclosporin A Crystal Complex at 2·1 Å Resolution, **234**, 1119–1130.

Cyclosporin
X-ray Structure of a Monomeric Cyclophilin A-Cyclosporin A Crystal Complex at 2·1 Å Resolution, **234**, 1119–1130.

CyoA subunit
Crystallization and Preliminary X-ray Analysis of the Periplasmic Fragment of CyoA-a Subunit of the *Escherichia coli* Cytochrome *o* Complex, **229**, 794–796.

Cystatin
The Structures of Native Phosphorylated Chicken Cystatin and of a Recombinant Unphosphorylated Variant in Solution, **234**, 1048–1059.
Conformational Variability of Chicken Cystatin. Comparison of Structures Determined by X-ray Diffraction and NMR Spectroscopy, **234**, 1060–1069.

Cysteine proteinase
Conformational Variability of Chicken Cystatin. Comparison of Structures Determined by X-ray Diffraction and NMR Spectroscopy, **234**, 1060–1069.

Cytochrome
Molten Globule of Cytochrome *c* Studied by Small Angle X-ray Scattering, **229**, 591–596.
Guanidine Hydrochloride-induced Folding of Proteins, **231**, 180–184.
Crystallization and Preliminary X-ray Analysis of the Di-Haem Cytochrome *c* Peroxidase from *Pseudomonas aeruginosa*, **232**, 1208–1210.
Crystallization and Preliminary Crystallographic Study of Cytochrome cd_1 Nitrite Reductase from *Thiosphaera pantotropha*, **232**, 1211–1212.
Atomic Structure of a Cytochrome *c'* with an Unusual Ligand-controlled Dimer Dissociation at 1·8 Å Resolution, **234**, 433–445.
Structure Analysis of Cytochrome c_3 From *Desulfovibrio vulgaris* Hildenborough at 1·9 Å Resolution, **234**, 680–699.

Cytokine
Crystallization and Preliminary Crystallographic Analysis of a TNF-β–55 kDa TNF Receptor Complex, **229**, 555–557.
Crystallization and Preliminary X-ray Diffraction Studies of Recombinant Human Interleukin-5, **229**, 1150–1152.
Crystal Structure of Canine and Bovine Granulocyte-colony Stimulating Factor (G-CSF), **234**, 640–653.

Cytoskeleton
Projection Image of Smooth Muscle α-Actinin from Two Dimensional Crystals Formed on Positively Charged Lipid Layers, **230**, 196–205.
Crystallization of the Motile Major Sperm Protein (MSP) of the Nematode *Ascaris suum*, **232**, 298–300.

D15 exonuclease
Preliminary Crystallographic Studies on the D15 5′ to 3′ Exonuclease from Phage T5, **233**, 179–182.

Darkfield electron microscopy
Homologous DNA Targeting with RecA Protein-coated Short DNA Probes and Electron Microscope Mapping on Linear Duplex Molecules, **232**, 779–791.

Database
Identification of Tertiary Structure Resemblance in Proteins Using a Maximal Common Subgraph Isomorphism Algorithm, **229**, 707–721.
Prediction of Protein Structure by Evaluation of Sequence-structure Fitness. Aligning Sequences to Contact Profiles Derived from Three-dimensional Structures, **232**, 805–825.
Protein Structure Comparison by Alignment of Distance Matrices, **233**, 123–138.
A Structural Basis for Sequence Comparisons. An Evaluation of Scoring Methodologies, **233**, 716–738.

Deamidation
Diffraction Grade Crystals of *Escherichia coli* Serine Hydroxymethyltransferase, **230**, 1094–1096.

Decarboxylase
Refined Structure of the Pyruvoyl-dependent Histidine Decarboxylase from *Lactobacillus* 30a, **230**, 516–528.

Deglycosylation
Crystallization of the C-terminal Domain of Rabbit Serum Hemopexin, **229**, 251–252.

Dehalogenase
Refined X-ray Structures of Haloalkane Dehalogenase at pH 6·2 and pH 8·2 and Implications for the Reaction Mechanism, **232**, 856–872.

Dehydrogenase
Crystal Structure of a Ternary Complex of *Escherichia coli* Malate Dehydrogenase Citrate and NAD at 1·9 Å Resolution, **232**, 213–222.
Preliminary Crystallographic Study of 6-Phosphogluconate Dehydrogenase from *Trypanosoma brucei*, **233**, 317–321.
Crystallization and Preliminary X-ray Diffraction Analysis of the Complex of Human Placental 17β-Hydroxysteroid Dehydrogenase with $NADP^+$, **234**, 242–244.

Dendrotoxin K
Nuclear Magnetic Resonance Solution Structure of Dendrotoxin K from the Venom of *Dendroaspis polylepis polylepis*, **234**, 735–750.

NAD^+-dependent dehydrogenase
Preliminary Crystallographic Study of D(−)-Mandelate Dehydrogenase from *Rhodotorula graminis*, **233**, 781–783.

Des(1-45) Factor Xa
Structure of Human Des(1-45) Factor Xa at 2·2 Å Resolution, **232**, 947–966.

Desmin
Separation and Characterization of Homo and Hetero-oligomers of the Intermediate Filament Proteins Desmin and Vimentin, **230**, 837–856.

Detergent
Human Erythrocyte Band 3. Solubilization and Reconstitution into Two-dimensional crystals, **231**, 119–132.
Orthorhombic Crystal Form of Bacteriorhodopsin Nucleated on Benzamidine Diffracting to 3·6 Å Resolution, **234**, 156–164.

Development
La Proteins from *Xenopus laevis*. cDNA Cloning and Developmental Expression, **231**, 196–204.
Two Secretory Protein Genes in *Chironomus tentans* Have Arisen by Gene Duplication and Exhibit Different Developmental Expression Patterns, **231**, 324–334.
The CUB Domain. A Widespread Module in Developmentally Regulated Proteins, **231**, 539–545.
Nutrient-responsive Promoter Elements of the V4 Gene of *Dictyostelium discoideum*, **232**, 386–396.
Identification of the Auxin-responsive Element, *AuxRE*, in the Primary indoleacetic Acid-inducible Gene, *PS-IAA4/5*, of Pea (*Pisum sativum*), **233**, 580–596.

DHFR
Preliminary Crystallographic Data for *Pneumocystis carinii* Dihydrofolate Reductase, **230**, 679–680.

Diabetic
The *in Vivo* Glycation of Diabetic Tendon Collagen Studied by Neutron Diffraction, **230**, 1297–1303.

Diamminedichloroplatinum (II)
T4 Endonuclease VII Cleaves DNA Containing a Cisplatin Adduct, **233**, 77–85.

2,4-dichlorophenoxyacetate
Crystallization and Preliminary X-ray Data of Chloromuconate Cycloisomerase from *Alcaligenes eutrophus* JMP134 (pJP4), **232**, 305–307.

Dictyostelium
Nutrient-responsive Promoter Elements of the V4 Gene of *Dictyostelium discoideum*, **232**, 386–396.

Dielectric model
Stabilization of Protein Crystals by Electrostatic Interactions as Revealed by a Numerical Approach, **234**, 421–432.

Digital imaging spectroscopy
Hydropathy and Molar Volume Constraints on Combinatorial Mutants of the Photosynthetic Reaction Center, **232**, 242–252.

Dihydrolipoamide acetyltransferase
The High-resolution Structure of the Peripheral Subunit-binding Domain of Dihydrolipoamide Acetyltransferase from the Pyruvate Dehydrogenase Multienzyme Complex of *Bacillus stearothermophilus*, **230**, 323–341.

2,3-diphosphoglycerate
Human Deoxyhaemoglobin-2,3-Diphosphoglycerate Complex Low-Salt Structure at 2·5 Å Resolution, **233**, 270–274.

Dipicolinic acid
Cloning, DNA Sequence, Functional Analysis and Transcriptional Regulation of the Genes Encoding Dipicolinic Acid Synthetase Required for Sporulation in *Bacillus subtilis*, **232**, 468–483.

Dipolar shift
Solution Nuclear Magnetic Resonance Determination of Active Site Structure for a Paramagnetic Protein: Cyanomet *Aplysia* Myoglobin, **231**, 1009–1023.

Directional mutation pressure
Unassigned or Nonsense Codons in *Micrococcus luteus*, **230**, 51–56.

Disintegrin
The Nuclear Magnetic Resonance Solution Structure of Flavoridin, an Antagonist of the Platelet GP IIb-IIIa Receptor, **232**, 907–925.

Distance geometry
Three-dimensional Structure in Solution of the Calcium Channel Blocker ω-Conotoxin, **234**, 405–420.

Distance inequalities
Protein Structures from Distance Inequalities, **231**, 861–869.

Disulfide bonds
Partially Folded Conformation of the (30-51) Intermediate in the Disulphide Folding Pathway of Bovine Pancreatic Trypsin Inhibitor. ^{1}H and ^{15}N Resonance Assignments and Determination of Backbone Dynamics from ^{15}N Relaxation Measurements, **229**, 1125–1146.
Requirement for a Disulfide Bridge Near the Reactive Site of Protease Inhibitor SSI (*Streptomyces* Subtilisin Inhibitor) for its Inhibitory Action, **230**, 395–399.
Refined Crystal Structure of Human Transforming Growth Factor $\beta 2$ at 1·95 Å Resolution, **231**, 445–458.
Determination of the Disulphide Bonding Pattern in Proteins by Local and Global Analysis of Nuclear Magnetic Resonance Data. Application to Flavoridin, **232**, 897–906.
Three-dimensional Structure in Solution of the Calcium Channel Blocker ω-Conotoxin, **234**, 405–420.

DNA accessibility
DNA Tridimensional Context Affects the Reactivity of Eukaryotic DNA Topoisomerase I, **231**, 634–645.

DNA A-tract structure
A DNA Dodecamer Containing an Adenine Tract Crystallizes in a Unique Lattice and Exhibits a New Bend, **231**, 1024–1039.

DNA backbone distortions
Structural Deviations at CpG Provide a Plausible Explanation for the High Frequency of Mutation at This Site. Phosphorus Nuclear Magnetic Resonance and Circular Dichroism Studies, **230**, 373–378.

DNA base triads
Electron Microscopy Visualization of Oligonucleotide Binding to Duplex DNA *via* Triplex Formation, **230**, 379–383.

DNA bending
Negative Supercoiling and Nucleosome Cores. II. The Effect of Negative Supercoiling on the Positioning of Nucleosome Cores *in Vitro*, **229**, 637–655.
Function of IHF in λ DNA Packaging. I. Identification of the Strong Binding Site for Integration Host Factor and the Locus for Intrinsic Bending in *cosB*, **230**, 492–504.
A DNA Dodecamer Containing an Adenine Tract Crystallizes in a Unique Lattice and Exhibits a New Bend, **231**, 1024–1039.
Interactions of NodD at the *nod* Box: NodD Binds to Two Distinct Sites on the Same Face of the Helix and Induces a Bend in the DNA, **233**, 336–348.

DNA bending proteins
Structure of Nucleosomal DNA at High Salt Concentration as Probed by Hydroxyl Radical, **229**, 827–832.
Zinc Finger Mutations that Alter Domain Interactions in the Glucocorticoid Receptor, **230**, 124–136.
Interactions between Morpholinyl Anthracyclines and DNA. The Crystal Structure of a Morpholino Doxorubicin Bound to d(CGTACG), **230**, 878–889.
Highly Cooperative DNA Binding by the Coliphage HK022 Repressor, **230**, 1108–1130.
Conformation of the Origin of P1 Plasmid Replication. Initiator Protein Induced Wrapping and Intrinsic Unstacking, **231**, 19–28.
Redox Regulation of *in Vitro* DNA-binding Activity by the Homeodomain of the Isl-1 Protein, **231**, 945–949.
Interactions of NodD at the *nod* Box: NodD Binds to Two Distinct Sites on the Same Face of the Helix and Induces a Bend in the DNA, **233**, 336–348.
Residues of the *Bacillus subtilis* phage Φ29 Transcriptional Activator Required Both to Interact with RNA Polymerase and to Activate Transcription, **233**, 695–704.
In Vitro Binding of the Pleiotropic Transcriptional Regulatory Protein, FruR, to the *fru*, *pps*, *ace*, *pts* and *icd* Operons of *Escherichia coli* and *Salmonella typhimurium*, **234**, 28–44.
Negative Co-dominant Inhibition of recA Protein Function. Biochemical Properties of the recA1, recA13 and recA56 Proteins and the Effect of recA56 Protein on the Activities of the Wild-type recA Protein Function *in Vitro*, **234**, 72–86.

DNA binding ACGT *cis*-elements
Plant bZIP Protein DNA Binding Specificity, **230**, 1131–1144.

DNA binding protein
Hierarchy of Base-pair Preference in the Binding Domain of the Bacteriophage T7 Promoter, **229**, 805–811.
Specificity of the Mnt Protein. Independent Effects of Mutations at Different Positions in the Operator, **229**, 821–826.
Function of IHF in λ DNA Packaging. I. Identification of the Strong Binding Site for Integration Host Factor and the Locus for Intrinsic Bending in *cosB*, **230**, 492–504.
Separation and Characterization of Homo and Hetero-oligomers of the Intermediate Filament Proteins Desmin and Vimentin, **230**, 837–856.
Plant bZIP Protein DNA Binding Specificity, **230**, 1131–1144.
RecQ DNA Helicase of *Escherichia coli*. Characterization of the Helix-unwinding Activity with Emphasis on the Effect of Single-stranded DNA-binding Protein, **230**, 1145–1150.
Activation of DNA Binding by the Monomeric Form of the P1 Replication Initiator RepA by Heat Shock Proteins DnaJ and DnaK, **232**, 23–34.
The Phage 434 O_R2/R1-69 Complex at 2·5 Å Resolution, **232**, 826–838.
Crystallization and Preliminary X-ray Analysis of the DNA Binding Domain of the Hin Recombinase with Its DNA Binding Site, **232**, 982–986.
Information Analysis of Sequences that Bind the Replication Initiator RepA, **233**, 219–230.
Yeast a1 and α2 Homeodomain Proteins Form a DNA-binding Activity with Properties Distinct from those of either Protein, **233**, 359–371.
Characterization of a Set of Integration Host Factor Mutants Deficient for DNA Binding, **234**, 45–59.
DNA Recognition by the *Eco*K Methyltransferase. The Influence of DNA Methylation and the Cofactor *S*-adenosyl-L-methionine, **234**, 60–71.
Cocrystals of *Escherichia coli trp* Repressor Bound to an Alternative Operator DNA Sequence, **234**, 496–498.
Nuclear Magnetic Resonance Spectroscopy of a DNA Complex with the Uniformly ^{13}C-Labeled *Antennapedia* Homeodomain and Structure Determination of the DNA-bound Homeodomain, **234**, 1070–1083.

DNA branch migration
Crossed-Stranded DNA Structures for Investigating the Molecular Dynamics of the Holliday Junction, **229**, 812–820.
Formation of a Single Base Mismatch Impedes Spontaneous DNA Branch Migration, **230**, 413–424.

DNA branching
Conformation and Thermodynamics of DNA "Necks". Models for Three-Arm Branch Formation in a Duplex, **230**, 766–778.

DNA *B–Z* junction
Sequence Dependence of the Free Energy of *B–Z* Junction Formation in Deoxyoligonucleotides, **231**, 475–488.

DNA C-8 puff gene
Molecular Characterization of the DNA Puff C-8 Gene of *Rhynchosciara americana*, **233**, 799–803.

DNA cleavage
Small Deletion and Insertion Mutations Induced by the Topoisomerase II Inhibitor Teniposide in CHO Cells and Comparison with Sites of Drug-stimulated DNA Cleavage *in Vitro*, **229**, 52–66.

DNA Tridimensional Context Affects the Reactivity of Eukaryotic DNA Topoisomerase I, **231**, 634–645.
A Cluster of Strong Topoisomerase II Cleavage Sites is Located Near an Integrated Human Immunodeficiency Virus, **232**, 1060–1068.
Crystallization of a 67 kDa Fragment of *Escherichia coli* DNA Topoisomerase I, **232**, 1213–1216.

DNA closed circular
The Free Energy, Enthalpy and Entropy of Native and of Partially Denatured Closed Circular DNA, **234**, 1184–1196.

DNA conformation
Superhelical Path of the DNA in the Nucleoprotein Complex that Activates the Initiation of Phage ϕ29 DNA Replication, **230**, 248–259.
Interactions between Morpholinyl Anthracyclines and DNA. The Crystal Structure of a Morpholino Doxorubicin Bound to d(CGTACG), **230**, 878–889.
Sequence Dependence of the Free Energy of *B–Z* Junction Formation in Deoxyoligonucleotides, **231**, 475–488.
The Phage 434 OR2/R1-69 Complex at 2·5 Å Resolution, **232**, 826–838.

DNA CpG mutation
Structural Deviations at CpG Provide a Plausible Explanation for the High Frequency of Mutation at This Site. Phosphorus Nuclear Magnetic Resonance and Circular Dichroism Studies, **230**, 373–378.

DNA cross-linking
Characterization of a Set of Integration Host Factor Mutants Deficient for DNA Binding, **234**, 45–59.

DNA crystal lattice
A DNA Dodecamer Containing an Adenine Tract Crystallizes in a Unique Lattice and Exhibits a New Bend, **231**, 1024–1039.

DNA curved
DNA Tridimensional Context Affects the Reactivity of Eukaryotic DNA Topoisomerase I, **231**, 634–645.

DNA deletion
Precise Deletions in Large Bacterial Genomes by Vector-mediated Excision (VEX). The *trfA* Gene of Promiscuous Plasmid RK2 is Essential for Replication in Several Gram-negative Hosts, **230**, 174–185.

DNA denaturation
The Free Energy, Enthalpy and Entropy of Native and of Partially Denatured Closed Circular DNA, **234**, 1184–1196.

DNA direct repeat
Identification of a *cis*-acting Sequence within the *Pm* Promoter of the TOL Plasmid which Confers XylS-mediated Responsiveness to Substituted Benzoates, **230**, 699–703.

DNA footprinting
Conformation and Thermodynamics of DNA "Necks". Models for Three-Arm Branch Formation in a Duplex, **230**, 766–778.
Conformation of the Origin of P1 Plasmid Replication. Initiator Protein Induced Wrapping and Intrinsic Unstacking, **231**, 19–28.
Distortion of the DNA Double Helix by RAP1 at Silencers and Multiple Telomeric Binding Sites, **231**, 293 310.
Dissection of the DNA-binding Domain of *Xenopus laevis* TFIIIA. Quantitative DNase I Footprinting Analysis of Specific Complexes between a 5 S RNA Gene Fragment and N-terminal Fragments of TFIIIA Containing Three, Four or Five Zinc-finger Domains, **233**, 191–202.
Operator Sequence Context Influences Amino Acid–Base-pair Interactions in 434 Repressor–Operator Complexes, **234**, 542–553.

DNA four-stranded complexes
Complement-stabilized D-loop. RecA-catalyzed Stable Pairing of Linear DNA Molecules at Internal Sites, **230**, 1015–1024.

DNA genomic footprinting
Genomic Footprinting of the Promoter Regions of *STE2* and *STE3* genes in the Yeast *Saccharomyces cerevisiae*, **234**, 975–987.

DNA G-quadruplex
Solution Structure of a Parallel-stranded G-Quadruplex DNA, **234**, 1171–1183.

***H*-DNA**
Structural Polymorphism of Homopurine-Homopyrimidine Sequences at Neutral pH, **231**, 1090–1101.

DNA hairpin
Energetics of a Stable Intramolecular DNA Triple Helix Formation, **230**, 1278–1290.

DNA helical repeat
In Vivo Thermodynamic Analysis of Repression with and without Looping in *lac* Constructs. Estimates of Free and Local *lac* Repressor Concentrations and of Physical Properties of a Region of Supercoiled Plasmid DNA *in Vivo*, **230**, 161–173.

DNA helicase
RecQ DNA Helicase of *Escherichia coli*. Characterization of the Helix-unwinding Activity with Emphasis on the Effect of Single-stranded DNA-binding Protein, **230**, 1145–1150.
Biochemical Characterization of a Mutant recBCD Enzyme, the recB2109CD Enzyme, Which Lacks χ-specific, but Not Non-specific, Nuclease Activity, **231**, 605–620.
The Mutant recBCD Enzyme, recB2109CD Enzyme, Has Helicase Activity but Does Not Promote Efficient Joint Molecule Formation *in Vitro*, **231**, 621–633.

DNA heteroduplex
Crossed-Stranded DNA Structures for Investigating the Molecular Dynamics of the Holliday Junction, **229**, 812–820.
Endonuclease VII of Phage T4 Triggers Mismatch Correction *in Vitro*, **230**, 868–877.

DNA homoduplexes
Structural Polymorphism of d(GA·TC)*n* DNA Sequences. Intramolecular and Intermolecular Associations of the Individual Strands, **233**, 671–681.

DNA homopurine–homopyrimidine
Structural Polymorphism of Homopurine-Homopyrimidine Sequences at Neutral pH, **231**, 1090–1101.

DNA homopyrimidine
Characterization of the Zinc-induced Structural Transition to *H-DNA at a d(GA·CT)22 Sequence, **230**, 966–978.

DNA *In vivo* footprinting
Protein–DNA Interactions of the Mouse αA-Crystallin Control Regions. Differences Between Expressing and Non-expressing Cells, **230**, 425–435.
GEBF-I activates the *Drosophila* Sgs3 gene enhancer by altering a positioned nucleosomal core particle, **234**, 319 330.

DNA *in vivo* thermodynamic activity
In Vivo Thermodynamic Analysis of Repression with and without Looping in *lac* Constructs. Estimates of Free and Local *lac* Repressor Concentrations and of Physical Properties of a Region of Supercoiled Plasmid DNA *in Vivo*, **230**, 161–173.

DNA initiation of replication
Superhelical Path of the DNA in the Nucleoprotein Complex that Activates the Initiation of Phage ϕ29 DNA Replication, **230**, 248–259.
Studies of Bacteriophage P2 DNA Replication. The DNA Sequence of the *Cis*-acting Gene *A* and *ori* Region and Construction of a P2 Mini-chromosome, **231**, 361–374.

DNA intercalation
Characterization of a Triple Helix-specific Ligand. BePI {3-methoxy-7H-8-methyl-11-[(3′-amino) propylamino]-benzo [e]pyrido [4,3-b]indole} Intercalates into Both Double-helical and Triple-helical DNA, **232**, 926–946.

DNA interfacial activation
1·8 Å Refined Structure of the Lipase from *Geotrichum candidum*, **230**, 575–591.

DNA inverted repeats
A Cluster of Strong Topoisomerase II Cleavage Sites is Located Near an Integrated Human Immunodeficiency Virus, **232**, 1060–1068.

DNA junction resolution
T4 Endonuclease VII Cleaves DNA Containing a Cisplatin Adduct, **233**, 77–85.

DNA leaders
The DNA Sequence of Adenovirus Type 40, **234**, 1308–1316.

DNA looping
In Vivo Thermodynamic Analysis of Repression with and without Looping in *lac* Constructs. Estimates of Free and Local *lac* Repressor Concentrations and of Physical Properties of a Region of Supercoiled Plasmid DNA *in Vivo*, **230**, 161–173.
Basal Promoter and Enhancer Element of Yeast U6 snRNA Gene, **233**, 644–658.

DNA loops
RIP60 Dimers and Multiples of Dimers Assemble Link Structures at an Origin of Bidirectional Replication in the Dihydrofolate Reductase Amplicon of Chinese Hamster Ovary Cells, **232**, 766–778.

DNA, Major/minor groove
Hierarchy of Base-pair Preference in the Binding Domain of the Bacteriophage T7 Promoter, **229**, 805–811.

DNA methylation
Effects of Co-factor and Deoxycytidine Substituted Oligonucleotides upon Sequence-specific Interactions between *Msp*I DNA Methyltransferase and DNA, **230**, 779–786.
DNA Recognition by the *Eco*K Methyltransferase. The Influence of DNA Methylation and the Cofactor *S*-adenosyl-L-methionine, **234**, 60–71.

DNA mismatch correction
Endonuclease VII of Phage T4 Triggers Mismatch Correction *in Vitro*, **230**, 868–877.

DNA negative supercoils
Negative Supercoiling and Nucleosome Cores. I. The Effect of Negative Supercoiling on the Efficiency of Nucleosome Core Formation *in Vitro*, **229**, 623–636.
Negative Supercoiling and Nucleosome Cores. II. The Effect of Negative Supercoiling on the Positioning of Nucleosome Cores *in Vitro*, **229**, 637–655.
Effect of Positive Supercoiling on DNA Compaction by Nucleosome Cores, **234**, 297–301.

DNA nested helices
The Crystal Structure of the Trigonal Decamer C-G-A-T-C-G-^{6me}A-T-C-G: a *B*-DNA Helix with 10·6 Base-pairs Per Turn, **231**, 768–784.

DNA non-B-DNA
Multiple Transitions to Non-B-DNA Structures Occur in the Distal Regulatory Region of the Rat Prolactin Gene, **229**, 344–367.

DNA novel triplets
High Resolution Crystal Structure of the *A*-DNA Decamer d(CCCGGCCGGG). Novel Intermolecular Base-paired G * (G·C) Triplets, **231**, 431–444.

DNA nucleotide excision repair
Electron Microscopy of DNA Excision Repair Patches Produced by Human Cell Extracts, **231**, 251–260.

DNA packaging
Function of IHF in λ DNA Packaging. II. Effects of Mutations Altering the IHF Binding Site and the Intrinsic Bend in *cosB* on λ Development, **230**, 505–515.
The Role of *cosB*, the Binding Site for Terminase, the DNA Packaging Enzyme of Bacteriophage λ, in the Nicking Reaction, **234**, 594–609.

DNA palindrome
In Vitro Binding of the Pleiotropic Transcriptional Regulatory Protein, FruR, to the *fru*, *pps*, *ace*, *pts* and *icd* Operons of *Escherichia coli* and *Salmonella typhimurium*, **234**, 28–44.

DNA photoreactivating enzyme
Crystallization and Preliminary X-ray Diffraction Studies of Photolyase (Photoreactivating Enzyme) from the Cyanobacterium *Anacystis nidulans*, **233**, 167–169.

DNA polymerase
Nucleation of RNA Chain Formation by *Escherichia coli* DNA-dependent RNA Polymerase, **232**, 35–49.
Sliding Clamps of DNA Polymerases, **234**, 915–925.

DNA positive supercoils
Effect of Positive Supercoiling on DNA Compaction by Nucleosome Cores, **234**, 297–301.

DNA repair
Purification, Crystallization and Space Group Determination of DNA Repair Enzyme Exonuclease III from *E. coli*, **229**, 239–242.
Electron Microscopy of DNA Excision Repair Patches Produced by Human Cell Extracts, **231**, 251–260.
Factors Influencing the Repair of the Mutagenic Lesion O^6-methylguanine in DNA by Human O^6-methylguanine-DNA Methyltransferase, **231**, 950–959.
Crystallization and Preliminary Crystallographic Analysis of *Escherichia coli* DNA Photolyase, **231**, 1122–1125.
Formation of a RuvAB-Holliday Junction Complex *in Vitro*, **232**, 397–405.
T4 Endonuclease VII Cleaves DNA Containing a Cisplatin Adduct, **233**, 77–85.
Crystallization and Preliminary X-ray Diffraction Studies of Photolyase (Photoreactivating Enzyme) from the Cyanobacterium *Anacystis nidulans*, **233**, 167–169.
Crystallization and Preliminary X-ray Analysis of the Uracil-DNA Glycosylase DNA Repair Enzyme from Herpes Simplex Virus Type 1, **234**, 910–912.

DNA repeats
Segment Substitutions in Alpha Satellite DNA. Unusual Structure of Human Chromosome 3-specific Alpha Satellite Repeat Unit, **231**, 516–520.

DNA replication
Assembly of the Bacteriophage T4 Replication Machine Requires the Acidic Carboxy Terminus of Gene *32* Protein, **229**, 398–418.
Analysis of Establishment Phase Replication of the Plasmid ColE1, **230**, 137–150.
Conformation of the Origin of P1 Plasmid Replication. Initiator Protein Induced Wrapping and Intrinsic Unstacking, **231**, 19–28.
Studies of Bacteriophage P2 DNA Replication. The DNA Sequence of the *Cis*-acting Gene *A* and *ori* Region and Construction of a P2 Mini-chromosome, **231**, 361–374.
Activation of DNA Binding by the Monomeric Form of the P1 Replication Initiator RepA by Heat Shock Proteins DnaJ and DnaK, **232**, 23–34.
Replicatively Active Complexes of DnaA Protein and the *Escherichia coli* Chromosomal Origin Observed in the Electron Microscope, **233**, 16–24.
Information Analysis of Sequences that Bind the Replication Initiator RepA, **233**, 219–230.

DNA rolling-circle replication
Studies of Bacteriophage P2 DNA Replication. The DNA Sequence of the *Cis*-acting Gene *A* and *ori* Region and Construction of a P2 Mini-chromosome, **231**, 361–374.

DNA satellite
Structure of the Sequences Adjacent to the Centromeric Alphoid Satellite DNA Array on the Human Y Chromosome, **230**, 787–799.

DNA sequence
Primary Structure of Three Distinct Isoabrins Determined by cDNA Sequencing. Conservation and Significance., **229**, 263–267.
Nucleotide Sequence and Characterization of *Rhizobium meliloti* Nodulation Competitiveness Genes *nfe*, **229**, 570–576.
Sequence and Structure of a New Coiled Coil Protein from a Microtubule Bundle in *Giardia*, **231**, 521–530.
Cocrystals of *Escherichia coli trp* Repressor Bound to an Alternative Operator DNA Sequence, **234**, 496–498.
Operator Sequence Context Influences Amino Acid–Base-pair Interactions in 434 Repressor–Operator Complexes, **234**, 542–553.

DNA sequences
Structural Polymorphism of d(GA·TC)$_n$ DNA Sequences. Intramolecular and Intermolecular Associations of the Individual Strands, **233**, 671–681.

DNA single-strand binding protein
Assembly of the Bacteriophage T4 Replication Machine Requires the Acidic Carboxy Terminus of Gene *32* Protein, **229**, 398–418.
Suppression of Bacteriophage T7 ssb Mutation with Host ssb, **234**, 926–931.

DNA splicing
DNA Deletion of Mitochondrial Introns is Correlated with the Process of Senescence in *Podospora anserina*, **234**, 1–7.

DNA stacking interactions
Characterization of a Triple Helix-specific Ligand. BePI {3-methoxy-7H-8-methyl-11-[(3′-amino) propylamino]-benzo [e]pyrido[4,3-b]indole} Intercalates into Both Double-helical and Triple-helical DNA, **232**, 926–946.

DNA stiffness
In Vivo Thermodynamic Analysis of Repression with and without Looping in *lac* Constructs. Estimates of Free and Local *lac* Repressor Concentrations and of Physical Properties of a Region of Supercoiled Plasmid DNA *in Vivo*, **230**, 161–173.

DNA strand transfer
Herpes Simplex Virus 1 Single-strand DNA-binding Protein (ICP8) Will Promote Homologous Pairing and Strand Transfer, **231**, 241–250.

DNA structure
Nuclear Magnetic Resonance Study of a Deoxyoligonucleotide Duplex Containing a Three Base Bulge, **229**, 173–188.
Base-pair Induced Shifts in the Tautomeric Equilibrium of a Modified DNA Base, **230**, 6–10.
Structural Deviations at CpG Provide a Plausible Explanation for the High Frequency of Mutation at This Site. Phosphorus Nuclear Magnetic Resonance and Circular Dichroism Studies, **230**, 373–378.
Conformation and Thermodynamics of DNA "Necks". Models for Three-Arm Branch Formation in a Duplex, **230**, 766–778.
Characterization of the Zinc-induced Structural Transition to *H-DNA at a d(GA·CT)$_{22}$ Sequence, **230**, 966–978.
Sequence-dependent DNA Structure. The Role of Base Stacking Interactions, **230**, 1025–1054.
High Resolution Crystal Structure of the *A*-DNA Decamer d(CCCGGCCGGG). Novel Intermolecular Base-paired G * (G·C) Triplets, **231**, 431–444.
Structural Polymorphism of Homopurine-Homopyrimidine Sequences at Neutral pH, **231**, 1090–1101.
Characterization of a Triple Helix-specific Ligand. BePI {3-methoxy-7H-8-methyl-11-[(3′-amino) propylamino]-benzo [e]pyrido[4,3-b]indole} Intercalates into Both Double-helical and Triple-helical DNA, **232**, 926–946.
Monte Carlo Analysis of the Conformation of DNA Catenanes, **232**, 1130–1140.
T4 Endonuclease VII Cleaves DNA Containing a Cisplatin Adduct, **233**, 77–85.
Crystal and Molecular Structure of d(CGTAGATCTACG) at 2·25 Å Resolution, **234**, 198–208.
Operator Sequence Context Influences Amino Acid–Base-pair Interactions in 434 Repressor–Operator Complexes, **234**, 542–553.
Solution Structure of a Parallel-stranded G-Quadruplex DNA, **234**, 1171–1183.

DNA supercoil
Multiple Transitions to Non-B-DNA Structures Occur in the Distal Regulatory Region of the Rat Prolactin Gene, **229**, 344–367.
Negative Supercoiling and Nucleosome Cores. I. The Effect of Negative Supercoiling on the Efficiency of Nucleosome Core Formation *in Vitro*, **229**, 623–636.
Superhelical Path of the DNA in the Nucleoprotein Complex that Activates the Initiation of Phage ϕ29 DNA Replication, **230**, 248–259.
Monte Carlo Analysis of the Conformation of DNA Catenanes, **232**, 1130–1140.

DNA targeting
Complement-stabilized D-loop. RecA-catalyzed Stable Pairing of Linear DNA Molecules at Internal Sites, **230**, 1015–1024.

DNA topoisomerase
DNA Tridimensional Context Affects the Reactivity of Eukaryotic DNA Topoisomerase I, **231**, 634–645.
Crystallization of a 67 kDa Fragment of *Escherichia coli* DNA Topoisomerase I, **232**, 1213–1216.

DNA trigonal
The Crystal Structure of the Trigonal Decamer C-G-A-T-C-G-^{6me}A-T-C-G: a *B*-DNA Helix with 10·6 Base-pairs Per Turn, **231**, 768–784.

DNA triple
Nuclear Magnetic Resonance Structural Studies of A·AT Base Triple Alignments in Intramolecular Purine·Purine·Pyrimidine DNA Triplexes in Solution, **234**, 188–197.

DNA triple helix
Homologous Recognition and Triplex Formation Promoted by RecA Protein between Duplex Oligonucleotides and Single-stranded DNA, **229**, 328–343.
Characterization of the Zinc-induced Structural Transition to *H-DNA at a d(GA·CT)$_{22}$ Sequence, **230**, 966–978.
Energetics of a Stable Intramolecular DNA Triple Helix Formation, **230**, 1278–1290.
Structural Polymorphism of Homopurine-Homopyrimidine Sequences at Neutral pH, **231**, 1090–1101.
Characterization of a Triple Helix-specific Ligand. BePI {3-methoxy-7H-8-methyl-11-[(3′-amino) propylamino]-benzo [e]pyrido[4,3-b]indole} Intercalates into Both Double-helical and Triple-helical DNA, **232**, 926–946.
Structural Polymorphism of d(GA·TC)$_n$ DNA Sequences. Intramolecular and Intermolecular Associations of the Individual Strands, **233**, 671–681.

DNA triplexes
Electron Microscopy Visualization of Oligonucleotide Binding to Duplex DNA *via* Triplex Formation, **230**, 379–383.
Nuclear Magnetic Resonance Structural Studies of A·AT Base Triple Alignments in Intramolecular Purine·Purine·Pyrimidine DNA Triplexes in Solution, **234**, 188–197.

DNA u.v.-cross-linking
Strand-specific Binding to Duplex DNA Ends by the Subunits of the *Escherichia coli* RecBCD Enzyme, **229**, 67–78.

DNA u.v. damage
Electron Microscopy of DNA Excision Repair Patches Produced by Human Cell Extracts, **231**, 251–260.

DNA unwinding
Strand-specific Binding to Duplex DNA Ends by the Subunits of the *Escherichia coli* RecBCD Enzyme, **229**, 67–78.
Multiple Transitions to Non-B-DNA Structures Occur in the Distal Regulatory Region of the Rat Prolactin Gene, **229**, 344–367.

DNA wrapping
Conformation of the Origin of P1 Plasmid Replication. Initiator Protein Induced Wrapping and Intrinsic Unstacking, **231**, 19–28.

DnaA protein
Replicatively Active Complexes of DnaA Protein and the *Escherichia coli* Chromosomal Origin Observed in the Electron Microscope, **233**, 16–24.

DNA-binding protein
Hierarchy of Base-pair Preference in the Binding Domain of the Bacteriophage T7 Promoter, **229**, 805–811.

DNA/RNA hybrid
Crystal Structure of Ribonuclease H from *Thermus thermophilus* HB8 Refined at 2·8 Å Resolution, **230**, 529–542.
Structure of a DNA:RNA Hybrid Duplex. Why RNase H Does Not Cleave Pure RNA, **233**, 509–523.

Drosophila melanogaster
Negative and Positive Regulators Modulate the Activity of a Silkmoth Chorion Gene during Choriogenesis, **230**, 151–160.
Dense Cluster of Genes is Located at the Ecdysone-regulated 3C Puff of *Drosophila melanogaster*, **231**, 531–538.
κB-like Motifs Regulate the Induction of Immune Genes in *Drosophila*, **232**, 327–333.
A *Drosophila* Gene Encoding an Epithelial Membrane Protein with Homology to CD36/LIMP II, **234**, 249–253.
Functional Dissection of Two Promoters that Control Sense and Antisense Transcription of *Drosophila melanogaster* F Elements, **234**, 988–997.

Drug design
A Comparison of the Anti-rhinoviral Drug Binding Pocket in HRV14 and HRV1A, **230**, 206–227.
Nuclear Magnetic Resonance Comparison of the Binding Sites of Mithramycin and Chromomycin on the Self-complementary Oligonucleotide $d(ACCCGGGT)_2$. Evidence that the Saccharide Chains have a role in Sequence Specificity, **231**, 753–767.
Preliminary Crystallographic Studies on Scytalone Dehydratase from *Magnaporthe grisea*, **232**, 999–1002.

DsbA protein
The Redox Properties of Protein Disulfide Isomerase (DsbA) of *Escherichia coli* Result from a Tense Conformation of its Oxidized Form, **233**, 559–566.

Duchenne muscular dystrophy
A Cluster of Transposon-like Repetitive Sequences in Intron 7 of the Human Dystrophin Gene, **232**, 314–321.

Dystrophin gene
A Cluster of Transposon-like Repetitive Sequences in Intron 7 of the Human Dystrophin Gene, **232**, 314–321.

Ecdysone
Dense Cluster of Genes is Located at the Ecdysone-regulated 3C Puff of *Drosophila melanogaster*, **231**, 531–538.

***Eco*RI**
Molecular Recognition Mediated by Bound Water. A Mechanism for Star Activity of the Restriction Endonuclease *Eco*RI, **234**, 302–306.

Ecotin
Crystallization and Preliminary X-ray Crystallographic Analysis of the Protease Inhibitor Ecotin, **229**, 1157–1158.

EF-hand
Structure of a Sarcoplasmic Calcium-binding Protein from Amphioxus Refined at 2·4 Å Resolution, **229**, 461–471.

EGF module
Structure of Human Des(1-45) Factor Xa at 2·2 Å Resolution, **232**, 947–966.

Egg-white avidin
Three-dimensional Structure of the Tetragonal Crystal Form of Egg-white Avidin in its Functional Complex with Biotin at 2·7 Å Resolution, **231**, 698–710.

Elafin
Crystallization of a Complex between an Elastase-specific Inhibitor Elafin and Porcine Pancreatic Elastase, **232**, 310–311.

Elastase
Crystallization of a Complex between an Elastase-specific Inhibitor Elafin and Porcine Pancreatic Elastase, **232**, 310–311.

Electron crystallography
Lipid-protein Interactions in Crystals of Plant Light-harvesting Complex, **234**, 347–356.

Electron microscopy
Nicotinic Acetylcholine Receptor at 9 Å Resolution, **229**, 1101–1124.
Electron Microscopy Visualization of Oligonucleotide Binding to Duplex DNA *via* Triplex Formation, **230**, 379–383.
The LexA Repressor Binds Within the Deep Helical Groove of the Activated RecA Filament, **231**, 29–40.
Herpes Simplex Virus 1 Single-strand DNA-binding Protein (ICP8) Will Promote Homologous Pairing and Strand Transfer, **231**, 241–250.
Electron Microscopy of DNA Excision Repair Patches Produced by Human Cell Extracts, **231**, 251–260.
DNA Conformation Induced by the Bacteriophage T4 UvsX Protein Appears Identical to the Conformation Induced by the *Escherichia coli* RecA Protein, **232**, 1–4.
A Conformational Change in the Actin Subunit Can Change the Flexibility of the Actin Filament, **232**, 334–341.
A Cluster of Strong Topoisomerase II Cleavage Sites is Located Near an Integrated Human Immunodeficiency Virus, **232**, 1060–1068.
Replicatively Active Complexes of DnaA Protein and the *Escherichia coli* Chromosomal Origin Observed in the Electron Microscope, **233**, 16–24.
Crossbridges in the Complete Unit Cell of Rigor Insect Flight Muscle Imaged by Three-dimensional Reconstruction from Oblique Sections, **233**, 86–108.
Structural Transitions During Maturation of Bacteriophage Lambda Capsids, **233**, 682–694.
Structural Features of the 26 S Proteasome Complex, **234**, 932–937.

Electron transfer
X-ray Analysis and Spectroscopic Characterization of M121Q Azurin. A Copper Site Model for Stellacyanin, **229**, 1007–1021.
Crystallization and Preliminary Crystallographic Analysis of *Escherichia coli* DNA Photolyase, **231**, 1122–1125.
Structure and Function of the *Escherichia coli* Ribonucleotide Reductase Protein R2, **232**, 123–164.
Nucleotide Sequence Analysis of Four Genes, *hupC*, *hupD*, *hupF* and *hupG*, Downstream of the Hydrogenase Structural Genes in *Bradyrhizobium japonicum*, **234**, 508–512.

Electrophoresis gel
Co-existing Structures of an mRNA Stability Determinant. The 5′ Region of the *Escherichia coli* and *Serratia marcescens ompA* mRNA, **229**, 656–670.
Energetics of a Stable Intramolecular DNA Triple Helix Formation, **230**, 1278–1290.
Molecular Cloning and Expression of the Transformation Sensitive Epithelial Marker Stratifin. A Member of a Protein Family that has been Involved in the Protein Kinase C Signalling Pathway, **231**, 982–998.
The Free Energy, Enthalpy and Entropy of Native and of Partially Denatured Closed Circular DNA, **234**, 1184–1196.

Electrophoresis pulsed-field
*Xba*I and *Bln*I Genomic Cleavage Maps of *Escherichia coli* K-12 Strain MG1655 and Comparative Analysis of Other Strains, **232**, 419–445.

Electrostatics
Molten Globule of Cytochrome *c* Studied by Small Angle X-ray Scattering, **229**, 591–596.
Determination of Individual Rate Constants k_1 and k_2 in Hen Egg-white Lysozyme. The Opening and Closing reactions in the Linderstrøm-Lang Model for Amide Solution Hydrogen Exchange in Proteins, **230**, 651–660.
Relocating a Negative Charge in the Binding Pocket of Trypsin, **230**, 934–949.
Sequence-dependent DNA Structure. The Role of Base Stacking Interactions, **230**, 1025–1054.
On the pH Dependence of Protein Stability, **231**, 459–474.
Long-Range Surface Charge–Charge Interactions in Proteins. Comparison of Experimental Results with Calculations from a Thoretical Method, **232**, 574–583.
Stabilization of Protein Crystals by Electrostatic Interactions as Revealed by a Numerical Approach, **234**, 421–432.

Elicitin
Crystallization and Preliminary X-ray Diffraction Studies of β-Cryptogein, a Toxic Elicitin Secreted by the Phytopathogenic Fungus *Phytophthora cryptogea*, **229**, 564–565.

Endochitinase
Crystal Structure of an Endochitinase from *Hordeum vulgare* L. Seeds, **229**, 189–193.

Endoglucanase
Crystallization and Preliminary X-ray Analysis of the Catalytic Domain of Endoglucanase from *Clostridium cellulolyticum*, **233**, 325–327.

Endonuclease VII
Endonuclease VII of Phage T4 Triggers Mismatch Correction *in Vitro*, **230**, 868–877.

Endoplasmic reticulum
On the Biosynthesis of Bovine Pancreatic Trypsin Inhibitor (BPTI). Structure, Processing, Folding and Disulphide Bond Formation of the Precursor *in Vitro* and in Microsomes, **232**, 1176–1196.
A *Saccharomyces cerevisiae* Cyclophilin Resident in the Endoplasmic Reticulum, **233**, 183–188.

Endoribonuclease
Dual Role of the Sequence-specific Bacteriophage T4 Endoribonuclease RegB. mRNA Inactivation and mRNA Destabilization, **233**, 429–446.

Endothelin
Preliminary Crystallization and X-ray Analysis of Orthorhombic Human Endothelin, **234**, 1250–1252.

δ-endotoxin
Cloning and Characterization of a Novel *Bacillus thuringiensis* Cytolytic Delta-Endotoxin, **229**, 319–327.

Energetics
Energetics of Heterodimer Formation among Gramicidin Analogues with an NH_2-terminal Addition or Deletion. Consequences of Missing a Residue at the Join in the Channel, **231**, 1102–1121.

Enthalpy
Physiological Relevance of the Overall ΔH of Oxygen Binding to Fetal Human Hemoglobin, **229**, 512–516.
Contribution of Hydration to Protein Folding Thermodynamics. I. The Enthalpy of Hyderation, **232**, 639–659.

Entropy
Contribution of Hydration to Protein Folding Thermodynamics, **232**, 660–679.

envZ
Requirement of Both Kinase and Phosphatase Activities of an *Escherichia coli* Receptor (Taz1) for Ligand-dependent Signal Transduction, **231**, 335–342.
Ligand Binding Induces an Asymmetrical Transmembrane Signal through a Receptor Dimer, **232**, 493–498.

Enzyme complex
Crystallization and X-ray Analysis of a Multienzyme Complex Containing RUBISCO and RuBP, **234**, 1274–1278.

Enzyme inhibition
Crystal Structures of Rat Anionic Trypsin Complexed with the Protein Inhibitors APPI and BPTI, **230**, 919–933.

Enzyme kinetics
Factors Influencing the Repair of the Mutagenic Lesion O^6-methylguanine in DNA by Human O^6-methylguanine-DNA Methyltransferase, **231**, 950–959.

Enzyme mechanism
Functional Interactions among the His40, Glu58 and His92 Catalysts of Ribonuclease T_1 as Studied by Double and Triple Mutants, **229**, 770–781.
Conformational Flexibility in Glutamate Dehydrogenase. Role of Water in Substrate Recognition and Catalysis, **234**, 1131–1139.

Enzyme reaction mechanism
Crystal Structure of Phospholipase C from *Bacillus cereus* Complexed with a Substrate Analog, **234**, 179–187.
Role of an Active Site Residue Analyzed by Combination of Mutagenesis and Coenzyme Analog, **234**, 1218–1229.

Enzyme structure
Structure of Hen Lysozyme in Solution, **229**, 930–944.
Crystallization of α-Galactosidase from *Trichoderma reesei*, **231**, 933–934.
Crystallization of Barley (1-3,1-4)-β-glucanase, Isoenzyme II, **232**, 1003–1004.
Refined Structures of Substrate-bound and Phosphate-bound Thymidylate Synthase from *Lactobacillus casei*, **232**, 1101–1116.
Preliminary Crystallographic Study of D(—)-Mandelate Dehydrogenase from *Rhodotorula graminis*, **233**, 781–783.

Eosinophil
Crystallization and Preliminary X-ray Diffraction Studies of Recombinant Human Interleukin-5, **229**, 1150–1152.

Epithelial cells
A *Drosophila* Gene Encoding an Epithelial Membrane Protein with Homology to CD36/LIMP II, **234**, 249–253.

Epitopes
Structural Patterns at Residue Positions 9, 18, 67 and 82 in the V_H Framework Regions of Human and Murine Immunoglobulins, **230**, 15–20.
Distribution of Surface-exposed and Non-accessible Amino Acid Sequences among the Two Major Structural Domains of the S-layer Protein of *Aeromonas salmonicida*, **233**, 753–765.

Erythromycin
Erythromycin Binding is Reduced in Ribosomes with Conformational Alterations in the 23 S rRNA Peptidyl Transferase Loop, **232**, 725–731.

Escherichia coli
Crystallization and Preliminary X-ray Diffraction Analysis of ScrY, a Specific Bacterial Outer Membrane Porin, **229**, 258–262.
Isolation and Sequencing of *Escherichia coli* Gene *proP* Reveals Unusual Structural Features of the Osmoregulatory Proline/Betaine Transporter, ProP, **229**, 268–276.
Lrp, a Global Regulatory Protein of *Escherichia coli*, Binds Co-operatively to Multiple Sites and Activates Transcription of *ilvIH*, **229**, 306–318.
Significant Dispersed Recurrent DNA Sequences in the *Escherichia coli* Genome. Several New Groups, **229**, 833–848.
Functional Expression of the Uncomplexed Serum Retinol-binding Protein in *Escherichia coli*. Ligand Binding and Reversible Unfolding Characteristics, **230**, 725–732.
RecQ DNA Helicase of *Escherichia coli*. Characterization of the Helix-unwinding Activity with Emphasis on the Effect of Single-stranded DNA-binding Protein, **230**, 1145–1150.
Recognition Nucleotides of *Escherichia coli* $tRNA^{Leu}$ and Its Elements Facilitating Discrimination from $tRNA^{Ser}$ and $tRNA^{Tyr}$, **231**, 219–229.
Genetic and Biochemical Analysis of the Integration Host Factor of *Escherichia coli*, **231**, 646–657.
Synthesis of Proteins in *Escherichia coli* is Limited by the Concentration of Free Ribosomes. Expression from Reporter Genes does not always Reflect Functional mRNA Levels, **231**, 678–688.
Activation of DNA Binding by the Monomeric Form of the P1 Replication Initiator RepA by Heat Shock Proteins DnaJ and DnaK, **232**, 23–34.
The Minus 35-Recognition Region of *Escherichia coli* Sigma 70 is Inessential for Initiation of Transcription at an "Extended Minus 10" Promoter, **232**, 406–418.
Crystallization of a 67 kDa Fragment of *Escherichia coli* DNA Topoisomerase I, **232**, 1213–1216.
The Gene Locus of the Proton-translocating NADH : Ubiquinone Oxidoreductase in *Escherichia coli*. Organization of the 14 Genes and Relationship Between the Derived Proteins and Subunits of Mitochondrial Complex I, **233**, 109–122.
Some Base Substitutions in the Leader of an *Escherichia coli* Ribosomal RNA Operon Affect the Structure and Function of Ribosomes. Evidence for a Transient Scaffold Function of the rRNA Leader, **233**, 203–218.
Crystallization and Preliminary X-ray Analysis of γ-Glutamyltranspeptidase from *Escherichia coli* K-12, **234**, 1259–1262.

Esterase
The Gut Esterase Gene (*ges-1*) From the Nematodes *Caenorhabditis elegans* and *Caenorhabditis briggsae*, **229**, 890–908.
Preliminary X-ray Study of Naproxen Esterase from *Bacillus subtilis*, **230**, 681–683.

Eubacteria
Studies of the Hyperthermophile *Thermotoga maritima* by Random Sequencing of cDNA and Genomic Libraries. Identification and Sequencing of the *trpEG (D)* Operon, **231**, 960–981.

Evolution
Improbability of General Antimutators, **229**, 8–13.
Empirical and Structural Models for Insertions and Deletions in the Divergent Evolution of Proteins, **229**, 1065–1082.
Segment Substitutions in Alpha Satellite DNA. Unusual Structure of Human Chromosome 3-specific Alpha Satellite Repeat Unit, **231**, 516–520.
κB-like Motifs Regulate the Induction of Immune Genes in *Drosophila*, **232**, 327–333.
Localization of Proteins HL29 and HL31 from *Haloarcula marismortui* within the 50 S Ribosomal Subunit by Chemical Crosslinking, **232**, 693–700.
Prediction of Protein Structure by Evaluation of Sequence-structure Fitness. Aligning Sequences to Contact Profiles Derived from Three-dimensional Structures, **232**, 805–825.
The Gene Clusters ARC and COR on Chromosomes 5 and 10, Respectively, of *Saccharomyces cerevisiae* Share a Common Ancestry, **233**, 372–388.
Mapping the Stability Determinants of Bacterial Tyrosyl Transfer RNA Synthetases by an Experimental Evolutionary Approach, **234**, 209–221.
Evolution of Allosteric Control in Glycogen Phosphorylase, **234**, 700–721.
Detecting Frame Shifts by Amino Acid Sequence Comparison, **234**, 1140–1157.
Divergent Evolution of an "Orphon" Histone Gene Cluster in *Chironomus*, **234**, 1301–1307.

Exoglycosidases
Crystallization and Preliminary Crystallographic Studies of Human β-Glucuronidase, **233**, 173–176.

Exon-intron organization
Structure of the Chicken Gene for SNAP-25 Reveals Duplicated Exons Encoding Distinct Isoforms of the Protein, **233**, 67–76.

Exonuclease
Purification, Crystallization and Space Group Determination of DNA Repair Enzyme Exonuclease III from *E. coli*, **229**, 239–242.
Suppression of Bacteriophage T7 ssb Mutation with Host ssb, **234**, 926–931.

Export channel
Domain Organization of the Subunit of the *Salmonella typhimurium* Flagellar Hook, **229**, 79–84.

Extracellular matrix
Solution Structure of Human Plasma Fibronectin under Different Solvent Conditions. Fluorescence Energy Transfer, Circular Dichroism and Light-scattering Studies, **230**, 625–640.

Extracellular signal-regulated kinases
Crystallization and Preliminary X-ray Studies of Extracellular Signal-regulated Kinase-2/MAP Kinase with an Incorporated His-tag, **233**, 550–552.

σ-factor
Nucleation of RNA Chain Formation by *Escherichia coli* DNA-dependent RNA Polymerase, **232**, 35–49.

Factor H
Solution Structure of a Pair of Complement Modules by Nuclear Magnetic Resonance, **232**, 268–284.

Factor Xa
Crystallization and Preliminary Crystallographic Analysis of Antistasin, a Leech-derived Inhibitor of Blood Coagulation Factor Xa, **231**, 1137–1138.

FAD
Crystallization and Preliminary X-ray Diffraction Studies of a NADH Oxidase from *Thermus thermophilus* HB8, **230**, 1086–1088.

FANTOM
Surface Area Included in Energy Refinement of Proteins. A Comparative Study on Atomic Solvation Parameters, **233**, 275–292.

Farnesyl diphosphate synthase
Crystallization and Preliminary X-ray Diffraction Studies of *Bacillus stearothermophilus* Farnesyl Diphosphate Synthase Expressed in *Escherichia Coli*, **233**, 787–788.

Fatty acid
Crystallographic Studies on a Family of Cellular Lipophilic Transport Proteins. Refinement of P2 Myelin Protein and the Structure Determination and Refinement of Cellular Retinol-binding Protein in Complex with All-*trans*-retinol, **230**, 1225–1246.

Fc receptor
Crystallization and Stoichiometry of Binding of a Complex between a Rat Intestinal Fc Receptor and Fc, **230**, 1077–1083.

Ferritin mRNA
The Influence of the Base-paired Flanking region on Structure and Function of the Ferritin mRNA Iron Regulatory Element, **231**, 230–240.

Fetus
Physiological Relevance of the Overall ΔH of Oxygen Binding to Fetal Human Hemoglobin, **229**, 512–516.

Fiber diffraction
Preliminary X-ray Diffraction Studies of Ribgrass Mosaic Virus, **234**, 902–904.

Fibrinogen
The Sequence of Cleavage of Fibrinopeptides from Fibrinogen is Important for Protofibril Formation and Enhancement of Lateral Aggregation in Fibrin Clots, **232**, 285–297.

Filaggrin
The Mechanism of Interaction of Filaggrin with Intermediate Filaments. The Ionic Zipper Hypothesis, **232**, 50–66.

Filamentous bacteriophage
Protein-protein Interactions During Filamentous Phage Assembly, **231**, 689–697.
fd Coat Protein Structure in Membrane Environments, **233**, 447–463.
The Contribution of Contact and Non-contact Residues of Antibody in the Affinity of Binding to Antigen. The Interaction of Mutant D1.3 Antibodies with Lysozyme, **234**, 958–964.

Filaments
Crystallization of the Motile Major Sperm Protein (MSP) of the Nematode *Ascaris suum*, **232**, 298–300.
Two Mutant RecA Proteins Possessing pH-dependent Strand Exchange Activity Exhibit pH-dependent Presynaptic Filament Formation, **233**, 59–66.
Temperature-sensitive Intermediate Filament Assembly. Alternative Structures of *Xenopus laevis* Vimentin *in Vitro* and *in Vivo*, **234**, 99–113.

FK506
Atomic Structures of the Human Immunophilin FKBP-12 Complexes with FK506 and Rapamycin, **229**, 105–124.

FKBP
Atomic Structures of the Human Immunophilin FKBP-12 Complexes with FK506 and Rapamycin, **229**, 105–124.

Flagella
Domain Organization of the Subunit of the *Salmonella typhimurium* Flagellar Hook, **229**, 79–84.
Significance of Duplicated Flagellin Genes in *Campylobacter*, **230**, 359–363.

Flavin
Crystallization and Preliminary Crystallographic Analysis of *Escherichia coli* DNA Photolyase, **231**, 1122–1125.

Flavoprotein
Crystal Structure of Glucose Oxidase from *Aspergillus niger* Refined at 2·3 Å Resolution, **229**, 153–172.
Three-dimensional Structure of Lipoamide Dehydrogenase from *Pseudomonas fluorescens* at 2·8 Å Resolution. Analysis of Redox and Thermostability Properties, **230**, 1200–1215.
Crystallization of Old Yellow Enzyme Illustrates an Effective Strategy for Increasing Protein Crystal Size, **234**, 502–507.

Flavoridin
Determination of the Disulphide Bonding Pattern in Proteins by Local and Global Analysis of Nuclear Magnetic Resonance Data. Application to Flavoridin, **232**, 897–906.
The Nuclear Magnetic Resonance Solution Structure of Flavoridin, an Antagonist of the Platelet GP IIb-IIIa Receptor, **232**, 907–925.

FLP
Resolution of Synthetic χ Structures by the FLP Site-specific Recombinase, **234**, 522–533.

Fluorescence energy transfer
Fluorescence Energy Transfer Distance Measurements. The Hydrophobic Helical Hairpin of Colicin A in the Membrane Bound State, **230**, 1055–1067.
Characterization of a Triple Helix-specific Ligand. BePI {3-methoxy-7H-8-methyl-11-[(3′-amino) propylamino]-benzo [e]pyrido[4,3-b]indole} Intercalates into Both Double-helical and Triple-helical DNA, **232**, 926–946.

Fluorescence microscopy
Turnover of Fluorescent Nucleoside Triphosphates by Isolated Immobilized Myosin Filaments, **234**, 114–123.

Fluorescent lipid
Cubic Phases of Lipid-containing Systems. A Translational Diffusion Study by Fluorescence Recovery After Photobleaching, **229**, 517–525.

Folate
Expression of the Human Placental Folate Receptor Transcript is Regulated in Human Tissues. Organization and Full Nucleotide Sequence of the Gene, **229**, 1175–1183.
Crystallization and Preliminary Crystallographic Analysis of *Escherichia coli* DNA Photolyase, **231**, 1122–1125.
Refined Structures of Substrate-bound and Phosphate-bound Thymidylate Synthase from *Lactobacillus casei*, **232**, 1101–1116.

Free energy
Affinity and Specificity of Serine Endopeptidase–Protein Inhibitor Interactions. Empirical Free Energy Calculations Based on X-ray Crystallographic Structures, **234**, 661–679.

Free radicals
X-rays Destroy the Lamellar Structure of Model Membranes, **229**, 291–294.

Freeze-fracture
Freeze-fracture Electron Microscope Study of Lipid Systems. The Cubic Phase of Space Group $Pm3n$, **229**, 526–539.

Frozen hydrated specimen
Three-dimensional Architecture of Human α2-Macroglobulin Transformed with Methylamine, **232**, 522–529.

Fructose 1,6-bisphosphate
Molecular Basis of Allosteric Activation of Bacterial L-Lactate Dehydrogenase, **230**, 21–27.

L-fuculose-1-phosphate aldolase
The Spatial Structure of the Class II L-Fuculose-1-phosphate Aldolase from *Escherichia coli*, **231**, 549–553.

Fumarase
Purification and Crystallization of Fumarase C from *Escherichia coli*, **231**, 141–144.

Fungal peroxidase
Crystallization and X-ray Diffraction Analysis of Recombinant *Coprinus cinereus* Peroxidase, **232**, 989–991.

Fungus
Crystals of β-Xylanase from *Aspergillus oryzae*, **230**, 661–663.

Fv
Production and Characterization of an Antibody Fv Fragment ^{15}N-Labeled in the V_L Domain Only, **232**, 15–22.
Crystallization of Single-Chain Fv Proteins, **234**, 897–901.

α-galactosidase
Crystallization of α-Galactosidase from *Trichoderma reesei*, **231**, 933–934.

β-galactosidase
Crystallization and Preliminary X-ray Analysis of the β-Galactosidase from the Extreme Thermophilic Archaebacterium *Sulfolobus solfataricus*, **229**, 561–563.

GCN4
The X-ray Structure of the GCN4-bZIP Bound to ATF/CREB Site DNA Shows the Complex Depends on DNA Flexibility, **233**, 139–154.

Gene cluster
Dense Cluster of Genes is Located at the Ecdysone-regulated 3C Puff of *Drosophila melanogaster*, **231**, 531–538.

Gene conversion
Evidence for a Clustered Genomic Organization of FAX-Zinc Finger Protein Encoding Transcription Units in *Xenopus laevis*, **230**, 400–412.
Segment Substitutions in Alpha Satellite DNA. Unusual Structure of Human Chromosome 3-specific Alpha Satellite Repeat Unit, **231**, 516–520.

Gene duplication
Two Secretory Protein Genes in *Chironomus tentans* Have Arisen by Gene Duplication and Exhibit Different Developmental Expression Patterns, **231**, 324–334.

Gene expression
Spacing Requirements Between LexA Operator Half-sites can be Relaxed by Fusing the LexA DNA Binding Domain with some Alternative Dimerization Domains, **229**, 1–7.
The Gut Esterase Gene (*ges-1*) From the Nematodes *Caenorhabditis elegans* and *Caenorhabditis briggsae*, **229**, 890–908.
Human hnRNP Protein A1 Gene Expression. Structural and Functional Characterization of the Promoter, **230**, 77–89.
Protein–DNA Interactions of the Mouse αA-Crystallin Control Regions. Differences Between Expressing and Non-expressing Cells, **230**, 425–435.
Expression of Bacteriophage T4 Gene *25* is Regulated *via* RNA Secondary Structure in the Translational Initiation Region, **230**, 717–721.
κB-like Motifs Regulate the Induction of Immune Genes in *Drosophila*, **232**, 327–333.

Gene family
Expression of the Human Placental Folate Receptor Transcript is Regulated in Human Tissues. Organization and Full Nucleotide Sequence of the Gene, **229**, 1175–1183.

Gene mapping
Homologous DNA Targeting with RecA Protein-coated Short DNA Probes and Electron Microscope Mapping on Linear Duplex Molecules, **232**, 779–791.

Gene nested
Dense Cluster of Genes is Located at the Ecdysone-regulated 3C Puff of *Drosophila melanogaster*, **231**, 531–538.

Gene order
The Gene Locus of the Proton-translocating NADH : Ubiquinone Oxidoreductase in *Escherichia coli*. Organization of the 14 Genes and Relationship Between the Derived Proteins and Subunits of Mitochondrial Complex I, **233**, 109–122.

Gene product 9
Crystallization and Preliminary Crystallographic Characterization of Bacteriophage T4 Baseplate Protein Encoded by Gene 9, **234**, 493–495.

Gene promoter
Human hnRNP Protein A1 Gene Expression. Structural and Functional Characterization of the Promoter, **230**, 77–89.

Gene rare codons
Dissecting the Disulphide-coupled Folding Pathway of Bovine Pancreatic Trypsin Inhibitor. Forming the First Disulphide Bonds in Analogues of the Reduced Protein, **232**, 873–896.

Gene reading frame
On the Role of the P-site in Leftward Ribosome Frameshifting at a Hungry Codon, **230**, 1–5.

Gene regulation
Structural and Functional Requirements for the Chromatin Transition at the *PHO5* Promoter in *Saccharomyces cerevisiae* upon *PHO5* Activation, **231**, 658 667.
Nutrient-responsive Promoter Elements of the V4 Gene of *Dictyostelium discoideum*, **232**, 386–396.
GEBF-I activates the *Drosophila* Sgs3 gene enhancer by altering a positioned nucleosomal core particle, **234**, 319–330.

Gene repeated sequence
RIP60 Dimers and Multiples of Dimers Assemble Link Structures at an Origin of Bidirectional Replication in the Dihydrofolate Reductase Amplicon of Chinese Hamster Ovary Cells, **232**, 766–778.

Gene sequence
The Gene Clusters ARC and COR on Chromosomes 5 and 10, Respectively, of *Saccharomyces cerevisiae* Share a Common Ancestry, **233**, 372–388.

Gene structure
Evidence for a Clustered Genomic Organization of FAX-Zinc Finger Protein Encoding Transcription Units in *Xenopus laevis*, **230**, 400–412.
The 5′ Flanking Sequences of the Mouse P-cadherin Gene, **231**, 935–941.
Structural Characterization of the Early Indoleacetic Acid-inducible Genes, *PS-IAA4/5* and *PS-IAA6*, of Pea (*Pisum sativum* L.), **233**, 789–798.

Gene super protein
Structure of the Chicken Gene for SNAP-25 Reveals Duplicated Exons Encoding Distinct Isoforms of the Protein, **233**, 67–76.

Gene superfamily
The CUB Domain. A Widespread Module in Developmentally Regulated Proteins, **231**, 539–545.

Genetic algorithms
Genetic Algorithms for Protein Folding Simulations, **231**, 75–81.

Genetic code
Undiscriminating Codon Reading with Adenosine in the Wobble Position, **230**, 739–749.
Phenotypic Suppression by Incorporation of an Alien Amino Acid, **231**, 161–166.

Genome analysis
*Xba*I and *Bln*I Genomic Cleavage Maps of *Escherichia coli* K-12 Strain MG1655 and Comparative Analysis of Other Strains, **232**, 419–445.
Genomic Footprinting of the Promoter Regions of *STE2* and *STE3* genes in the Yeast *Saccharomyces cerevisiae*, **234**, 975–987.

Genome physical map
*Xba*I and *Bln*I Genomic Cleavage Maps of *Escherichia coli* K-12 Strain MG1655 and Comparative Analysis of Other Strains, **232**, 419–445.

Geotrichum
1·8 Å Refined Structure of the Lipase from *Geotrichum candidum*, **230**, 575–591.

Germ-line restriction
Three-dimensional Structure of an Anti-steroid Fab′ and Progesterone-Fab′ Complex, **231**, 103–118.

Giardia
Sequence and Structure of a New Coiled Coil Protein from a Microtubule Bundle in *Giardia*, **231**, 521–530.

Gla domain
Structure of Human Des(1-45) Factor Xa at 2·2 Å Resolution, **232**, 947–966.

Globins
A Structural Basis for Sequence Comparisons. An Evaluation of Scoring Methodologies, **233**, 716–738.

(1,3;1,4)-β-glucanase
Crystallization of Barley (1-3,1-4)-β-glucanase, Isoenzyme II, **232**, 1003–1004.
Crystallization and Preliminary X-ray Analysis of (1,3)- and (1,3; 1,4)-β-*d*-Glucanases from Germinating Barley, **234**, 888–889.

Glucocorticoid receptor
Zinc Finger Mutations that Alter Domain Interactions in the Glucocorticoid Receptor, **230**, 124–136.

Gluconate operon
Missense Mutations in the *Bacillus subtilis gnt* Repressor that Diminish Operator Binding Ability, **231**, 167–174.

Glucose dehydrogenase
Crystallization and Preliminary Crystallographic Investigations of the Soluble Glucose Dehydrogenase from *Acinetobacter calcoaceticus*, **233**, 784–786.

Glucose oxidase
Crystal Structure of Glucose Oxidase from *Aspergillus* niger Refined at 2·3 Å Resolution, **229**, 153–172.

Glucose-6-P control
Evolution of Allosteric Control in Glycogen Phosphorylase, **234**, 700–721.

β-glucosidase
Crystallization and Preliminary Crystallographic Analysis of the Cyanogenic β-Glucosidase from the White Clover *Trifolium repens* L., **229**, 791–793.

Glutamate dehydrogenase
Evolution of Substrate Diversity in the Superfamily of Amino Acid Dehydrogenases. Prospects for Rational Chiral Synthesis, **234**, 938–945.
Conformational Flexibility in Glutamate Dehydrogenase. Role of Water in Substrate Recognition and Catalysis, **234**, 1131–1139.
Crystallization of the NADP-dependent Glutamate Dehydrogenase from *Escherichia coli*, **234**, 1270–1273.

γ-glutamyltranspeptidase
Crystallization and Preliminary X-ray Analysis of γ-Glutamyltranspeptidase from *Escherichia coli* K-12, **234**, 1259–1262.

Glutathione
Three-dimensional Structure of the Glutathione Synthetase from *Escherichia coli* B at 2·0 Å Resolution, **229**, 1083–1100.
Structural Differences between Wild-type NADP-dependent Glutathione Reductase from *Escherichia coli* and a Redesigned NAD-dependent Mutant, **231**, 191–195.
Mapping of the Zinc Binding Domain of *Escherichia coli* Methionyl-tRNA Synthetase, **231**, 1068–1077.
Structure Determination and Refinement of Human Alpha Class Glutathione Transferase A1-1, and a Comparison with the Mu and Pi Class Enzymes, **232**, 192–212.
Crystallization and Preliminary X-ray Analysis of γ-Glutamyltranspeptidase from *Escherichia coli* K-12, **234**, 1259–1262.

Glutathione-S-transferase
Mapping of the Zinc Binding Domain of *Escherichia coli* Methionyl-tRNA Synthetase, **231**, 1068–1077.

Glycation
The *in Vivo* Glycation of Diabetic Tendon Collagen Studied by Neutron Diffraction, **230**, 1297–1303.

Glycogen phosphorylase
Crystallographic Binding Studies on the Allosteric Inhibitor Glucose-6-Phosphate to T State Glycogen Phosphorylase b, **232**, 253–267.
Evolution of Allosteric Control in Glycogen Phosphorylase, **234**, 700–721.

Glycoprotein
Crystal Structure of Glucose Oxidase from *Aspergillus* niger Refined at 2·3 Å Resolution, **229**, 153–172.

***N*-glycosylase**
Primary Structure of Three Distinct Isoabrins Determined by cDNA Sequencing. Conservation and Significance., **229**, 263–267.

Glycosylation
Crystallization and Preliminary X-ray Analysis of the Di-Haem Cytochrome *c* Peroxidase from *Pseudomonas aeruginosa*, **232**, 1208–1210.

2′GMP
Crystal Structures of Ribonuclease F1 of *Fusarium moniliforme* in Its Free Form and in Complex with 2′GMP, **230**, 979–996.

***gnt* repressor**
Missense Mutations in the *Bacillus subtilis gnt* Repressor that Diminish Operator Binding Ability, **231**, 167–174.

GntR family
Missense Mutations in the *Bacillus subtilis gnt* Repressor that Diminish Operator Binding Ability, **231**, 167–174.

Gramicidin
Energetics of Heterodimer Formation among Gramicidin Analogues with an NH_2-terminal Addition or Deletion. Consequences of Missing a Residue at the Join in the Channel, **231**, 1102–1121.

Gram-negative
Characterization of the *Neisseria* Iga_β-core, **234**, 579–593.

Graph theory
Identification of Tertiary Structure Resemblance in Proteins Using a Maximal Common Subgraph Isomorphism Algorithm, **229**, 707–721.

Graphic modeling
Solution Structure of Selenocysteine-inserting $tRNA^{Sec}$ from *Escherichia coli*. Comparison with Canonical $tRNA^{Ser}$, **231**, 274–292.

GroEL
Two-dimensional Crystals of the Molecular Chaperone GroEL Reveal Structural Plasticity, **229**, 579–584.
Mutation Ala2 → Ser Destabilizes Intersubunit Interactions in the Molecular Chaperone GroEL, **231**, 58–64.
Refolding of Barnase in the Presence of GroE, **232**, 1197–1207.

GroES
Refolding of Barnase in the Presence of GroE, **232**, 1197–1207.

Growth control
Growth-rate-dependent Accumulation of Twelve tRNA Species in *Escherichia coli*, **230**, 483–491.
Synthesis of Proteins in *Escherichia coli* is Limited by the Concentration of Free Ribosomes. Expression from Reporter Genes does not always Reflect Functional mRNA Levels, **231**, 678–688.
Residues of the *Bacillus subtilis* phage Φ29 Transcriptional Activator Required Both to Interact with RNA Polymerase and to Activate Transcription, **233**, 695–704.

Guanidine hydrochloride
Guanidine Hydrochloride-induced Folding of Proteins, **231**, 180–184.

Gyrase
The F Plamid CcdB Protein Induces Efficient ATP-dependent DNA Cleavage by Gyrase, **234**, 534–541.

β-hairpins
Accommodating Sequence Changes in β-Hairpins in Proteins, **229**, 428–447.

Halorhodopsin
Projection Structure of Halorhodopsin from *Halobacterium halobium* at 6 Å Resolution Obtained by Electron Cryo-microscopy, **234**, 837–846.

HDEL-protein
A *Saccharomyces cerevisiae* Cyclophilin Resident in the Endoplasmic Reticulum, **233**, 183–188.

Heat shock protein
Thermodynamic and Structural Analysis of the Folding/Unfolding Transitions of the *Escherichia coli* Molecular Chaperone DnaK, **232**, 680–692.

An Avian αB-Crystallin. Non-lens Expression and Sequence Similarities with both Small (HSP27) and Large (HSP70) Heat Shock Proteins, **232**, 1221–1226.

Heat-labile enterotoxin
Refined Structure of *Escherichia coli* Heat-labile Enterotoxin, a Close Relative of Cholera Toxin, **230**, 890–918.

Helicases
Prokaryotic Members of a New Family of Putative Helicases with Similarity to Transcription Activator SNF2, **230**, 684–688.

Heme binding
Crystallization of the C-terminal Domain of Rabbit Serum Hemopexin, **229**, 251–252.

Heme interactions
Structure Analysis of Cytochrome c_3 From *Desulfovibrio vulgaris* Hildenborough at 1·9 Å Resolution, **234**, 680–699.

Heme pocket structure
Solution Nuclear Magnetic Resonance Determination of Active Site Structure for a Paramagnetic Protein: Cyanomet *Aplysia* Myoglobin, **231**, 1009–1023.

Heme, proteins
Investigations of Ligand Association and Dissociation Rates in the "Open" and "Closed" States of Myoglobin, **233**, 155–166.
High-Resolution Crystal Structures of Distal Histidine Mutants of Sperm Whale Myoglobin, **234**, 140–155.

Hemoglobin
Physiological Relevance of the Overall ΔH of Oxygen Binding to Fetal Human Hemoglobin, **229**, 512–516.
Human Deoxyhaemoglobin-2,3-Diphosphoglycerate Complex Low-Salt Structure at 2·5 Å Resolution, **233**, 270–274.
A Novel Allosteric Mechanism in Haemoglobin. Structure of Bovine Deoxyhaemoglobin, Absence of Specific Chloride-binding Sites and Origin of the Chloride-linked Bohr Effect in Bovine and Human Haemoglogin, **233**, 536–545.

Hemopexin
Crystallization of the C-terminal Domain of Rabbit Serum Hemopexin, **229**, 251–252.

Hemoprotein
X-ray Crystal Structure of Ferric *Aplysia limacina* Myoglobin in Different Liganded States, **233**, 498–508.

Heparin
Crystal Structure of Cleaved Bovine Antithrombin III at 3·2 Å Resolution, **232**, 223–241.
Crystallization and Preliminary X-ray Diffraction Analysis of Two Conformations of Intact Human Antithrombin, **234**, 1253–1258.

Herpes simplex virus
Herpes Simplex Virus 1 Single-strand DNA-binding Protein (ICP8) Will Promote Homologous Pairing and Strand Transfer, **231**, 241–250.
Structure of the Herpes Simplex Virus Capsid. Molecular Composition of the Pentons and the Triplexes, **232**, 499–511.
Crystallization and Preliminary X-ray Analysis of the Uracil-DNA Glycosylase DNA Repair Enzyme from Herpes Simplex Virus Type 1, **234**, 910–912.

Herpes virus
A Novel Arrangement of Zinc-binding Residues and Secondary Structure in the C_3HC_4 Motif of an Alpha Herpes Virus Protein Family, **234**, 1038–1047.

Heterocyclic inhibitors
Crystal Structure of the Complex between Human Carbonic Anhydrase II and the Aromatic Inhibitor 1,2,4-Triazole, **232**, 9–14.

Hin recombinase
Crystallization and Preliminary X-ray Analysis of the DNA Binding Domain of the Hin Recombinase with Its DNA Binding Site, **232**, 982–986.

Histocompatibility molecules
Crystallization and Stoichiometry of Binding of a Complex between a Rat Intestinal Fc Receptor and Fc, **230**, 1077–1083.

Histone
On the Location of Histones H1 and H5 in the Chromatin Fiber. Studies with Immobilized Trypsin and Chymotrypsin, **229**, 917–929.
Reconstitution of Short-spaced Chromatin from the Histone Octamer and either HMG-14,17 or Histone H1, **230**, 824–836.
An Imbalance of HU Synthesis Induces Mucoidy in *Escherichia coli*, **234**, 1021–1037.
Divergent Evolution of an "Orphon" Histone Gene Cluster in *Chironomus*, **234**, 1301–1307.

Histone acetylation
Reconstitution of Short-spaced Chromatin from the Histone Octamer and either HMG-14,17 or Histone H1, **230**, 824–836.

hnRNP
Mammalian Heterogeneous Ribonucleoprotein A1 and its Constituent Domains. Nucleic Acid Interaction, Structural Stability and Self-association, **229**, 873–889.

Holliday junction
Formation of a Single Base Mismatch Impedes Spontaneous DNA Branch Migration, **230**, 413–424.
The Crystal Structure of the Trigonal Decamer C-G-A-T-C-G-^{6me}A-T-C-G: a *B*-DNA Helix with 10·6 Base-pairs Per Turn, **231**, 768–784.

σ^{54}-holoenzyme
Glutamate at the Site of Phosphorylation of Nitrogen-regulatory Protein NTRC Mimics Aspartyl-Phosphate and Activates the Protein, **232**, 67–78.

Homeodomain
Redox Regulation of *in Vitro* DNA-binding Activity by the Homeodomain of the Isl-1 Protein, **231**, 945–949.
Yeast a1 and α2 Homeodomain Proteins Form a DNA-binding Activity with Properties Distinct from those of either Protein, **233**, 359–371.

Homologous recombination
Strand-specific Binding to Duplex DNA Ends by the Subunits of the *Escherichia coli* RecBCD Enzyme, **229**, 67–78.
Complement-stabilized D-loop. RecA-catalyzed Stable Pairing of Linear DNA Molecules at Internal Sites, **230**, 1015–1024.
Homologous DNA Targeting with RecA Protein-coated Short DNA Probes and Electron Microscope Mapping on Linear Duplex Molecules, **232**, 779–791.
Mutagenesis of the P-loop Motif in the ATP Binding Site of the RecA Protein from *Escherichia coli*, **232**, 1048–1059.

Hormone–receptor complex
Crystals of Human Growth Hormone–Receptor Complexes. Extracellular Domains of the Growth Hormone and Prolactin Receptors and a Hormone Mutant Designed to Prevent Receptor Dimerization, **231**, 1133–1136.
Comparison of a Structural and a Functional Epitope, **234**, 554–563.
Affinity Maturation of Human Growth Hormone by Monovalent Phage Display, **234**, 564–578.

Human butyrylcholinesterase
Chimeric Human Cholinesterase. Identification of Inter Sites Responsible for Recognition of Acetyl-or Butyrylcholinesterase-specific Ligands, **234**, 289–296.

Human dystrophin
A Cluster of Transposon-like Repetitive Sequences in Intron 7 of the Human Dystrophin Gene, **232**, 314–321.

Human growth hormone
Crystals of Human Growth Hormone–Receptor Complexes. Extracellular Domains of the Growth Hormone and Prolactin Receptors and a Hormone Mutant Designed to Prevent Receptor Dimerization, **231**, 1133–1136.
Affinity Maturation of Human Growth Hormone by Monovalent Phage Display, **234**, 564–578.

Human growth hormone receptor
Crystals of Human Growth Hormone–Receptor Complexes. Extracellular Domains of the Growth Hormone and Prolactin Receptors and a Hormone Mutant Designed to Prevent Receptor Dimerization, **231**, 1133–1136.

Human hnRNP A1
Human hnRNP Protein A1 Gene Expression. Structural and Functional Characterization of the Promoter, **230**, 77–89.

Human IgGFc complex
Identification of the Contact Surface of a Streptococcal Protein G Domain Complexed with a Human Fc Fragment, **233**, 331–335.

Human immunodeficiency virus
Conformational and Nucleic Acid Binding Studies on the Synthetic Nucleocapsid Protein of HIV-1, **229**, 94–104.
Functional Sites in the 5′ Region of Human Immunodeficiency Virus Type 1 RNA Form Defined Structural Domains, **229**, 382–397.
Analysis of the Interactions of HIV1 Replication Primer $tRNA^{Lys,3}$ with Nucleocapsid Protein and Reverse Transcriptase, **231**, 185–190.
HIV-1 Tat Overcomes Inefficient Transcriptional Elongation *in Vitro*, **232**, 732–746.
A Cluster of Strong Topoisomerase II Cleavage Sites is Located Near an Integrated Human Immunodeficiency Virus, **232**, 1060–1068.
Complementary Large Loops Determine the Rate of RNA Duplex Formation *in Vitro* in the Case of an Effective Antisense RNA Directed Against the Human Immunodeficiency Virus Type 1, **233**, 7–15.
Synergism between Tat and VP16 in *Trans*-activation of HIV-1 LTR, **234**, 610–619.
Refinement and Analysis of the Structure of the First Two Domains of Human CD4, **234**, 763–778.

Human immunodeficiency virus *trans*-activation
High Affinity Binding of TAR RNA by the Human Immunodeficiency Virus Type-1 *tat* Protein Requires Base-pairs in the RNA Stem and Amino Acid Residues Flanking the Basic Region, **230**, 90–110.
Hydrogen-bonding Contacts in the Major Groove are required for Human Immunodeficiency Virus Type-1 *tat* Protein Recognition of TAR RNA, **230**, 111–123.
Synergism between Tat and VP16 in *Trans*-activation of HIV-1 LTR, **234**, 610–619.

Human immunodeficiency virus type 1 (HIV-1)
High Affinity Binding of TAR RNA by the Human Immunodeficiency Virus Type-1 *tat* Protein Requires Base-pairs in the RNA Stem and Amino Acid Residues Flanking the Basic Region, **230**, 90–110.
Hydrogen-bonding Contacts in the Major Groove are required for Human Immunodeficiency Virus Type-1 *tat* Protein Recognition of TAR RNA, **230**, 111–123.

Human keratinocytes
Molecular Cloning and Expression of the Transformation Sensitive Epithelial Marker Stratifin. A Member of a Protein Family that has been Involved in the Protein Kinase C Signalling Pathway, **231**, 982–998.

Human lysozyme
Role of Arg115 in the Catalytic Action of Human Lysozyme. X-ray Structure of His115 and Glu115 Mutants, **233**, 524–535.

Human O^6-methylguanine-DNA methyltransferase (MGMT)
Factors Influencing the Repair of the Mutagenic Lesion O^6-methylguanine in DNA by Human O^6-methylguanine-DNA Methyltransferase, **231**, 950–959.

Human prolactin receptor
Crystals of Human Growth Hormone–Receptor Complexes. Extracellular Domains of the Growth Hormone and Prolactin Receptors and a Hormone Mutant Designed to Prevent Receptor Dimerization, **231**, 1133–1136.

Human transforming growth factor β2 (TGF-β2)
Refined Crystal Structure of Human Transforming Growth Factor β2 at 1·95 Å Resolution, **231**, 445–458.

Human Y chromosome
Structure of the Sequences Adjacent to the Centromeric Alphoid Satellite DNA Array on the Human Y Chromosome, **230**, 787–799.

Humanized antibody
X-ray Structures of the Antigen-Binding Domains from Three Variants of Humanized anti-$p185^{HER2}$ Antibody 4D5 and Comparison with Molecular Modeling, **229**, 969–995.
Structural Patterns at Residue Positions 9, 18, 67 and 82 in the V_H Framework Regions of Human and Murine Immunoglobulins, **230**, 15–20.

Hungry codon
On the Role of the P-site in Leftward Ribosome Frameshifting at a Hungry Codon, **230**, 1–5.

***hup* genes**
Nucleotide Sequence Analysis of Four Genes, *hupC*, *hupD*, *hupF* and *hupG*, Downstream of the Hydrogenase Structural Genes in *Bradyrhizobium japonicum*, **234**, 508–512.

Hydrogen bonds
Hierarchy of Base-pair Preference in the Binding Domain of the Bacteriophage T7 Promoter, **229**, 805–811.
Common Ring Motifs in Proteins Involving Asparagine or Glutamine Amide Groups Hydrogen-bonded to Main-chain Atoms, **231**, 888–896.
Termination and Slippage by Bacteriophage T7 RNA Polymerase, **232**, 1030–1047.
Anion Binding Sites in Protein Structures, **234**, 463–482.
Contribution of Buried Hydrogen Bonds to Protein Stability. The Crystal Structures of Two Barnase Mutants, **234**, 1158–1170.

Hydrogen exchange
Determination of Individual Rate Constants k_1 and k_2 in Hen Egg-white Lysozyme. The Opening and Closing reactions in the Linderstrøm-Lang Model for Amide/Solution Hydrogen Exchange in Proteins, **230**, 651–660.
Low Energy of Activation for Amide Hydrogen Exchange Reactions in Proteins Supports a Local Unfolding Model, **234**, 234–241.

Hydrogenase
Nucleotide Sequence Analysis of Four Genes, *hupC*, *hupD*, *hupF* and *hupG*, Downstream of the Hydrogenase Structural Genes in *Bradyrhizobium japonicum*, **234**, 508–512.

Hydrolase
Crystallization and Preliminary X-ray Studies of Human Erythrocyte Acylpeptide Hydrolase, **233**, 546–549.

Hydrophobicity
Protein Folding in the Absence of the Solvent Ordering Contribution to the Hydrophobic Interaction, **229**, 502–511.
Solution Structure of Human Plasma Fibronectin under Different Solvent Conditions. Fluorescence Energy Transfer, Circular Dichroism and Light-scattering Studies, **230**, 625–640.

What is the Natural Boundary of a Protein in Solution?, **230**, 641–650.
Empirical Scale of Side-chain Conformational Entropy in Protein Folding, **231**, 825–839.
Surface Area Included in Energy Refinement of Proteins. A Comparative Study on Atomic Solvation Parameters, **233**, 275–292.
fd Coat Protein Structure in Membrane Environments, **233**, 447–463.

Ice-like structure
Thermodynamic Studies of the Collagen-like Region of Human Subcomponent C1q. A Water-containing Structural Model, **234**, 654–660.

ICP8 protein
Herpes Simplex Virus 1 Single-strand DNA-binding Protein (ICP8) Will Promote Homologous Pairing and Strand Transfer, **231**, 241–250.

Illegitimate recombination
Small Deletion and Insertion Mutations Induced by the Topoisomerase II Inhibitor Teniposide in CHO Cells and Comparison with Sites of Drug-stimulated DNA Cleavage *in Vitro*, **229**, 52–66.

ilvIH
Lrp, a Global Regulatory Protein of *Escherichia coli*, Binds Co-operatively to Multiple Sites and Activates Transcription of *ilvIH*, **229**, 306–318.

Image analysis
Nicotinic Acetylcholine Receptor at 9 Å Resolution, **229**, 1101–1124.
The LexA Repressor Binds Within the Deep Helical Groove of the Activated RecA Filament, **231**, 29–40.
A Conformational Change in the Actin Subunit Can Change the Flexibility of the Actin Filament, **232**, 334–341.
Structural Features of the 26 S Proteasome Complex, **234**, 932–937.

Immobilized trypsin and chymotrypsin
On the Location of Histones H1 and H5 in the Chromatin Fiber. Studies with Immobilized Trypsin and Chymotrypsin, **229**, 917–929.

Immunity invertebrate
κB-like Motifs Regulate the Induction of Immune Genes in *Drosophila*, **232**, 327–333.

Immunoelectron microscopy
Evidence Indicating that the Human Proteasome is a Complex Dimer, **229**, 14–19.
The Orientation of Porin OmpF in the Outer Membrane of *Escherichia coli*, **233**, 400–413.

Immunoglobulin A protease
Characterization of the *Neisseria* Iga_β-core, **234**, 579–593.

Immunoglobulin structure
Structural Patterns at Residue Positions 9, 18, 67 and 82 in the V_H Framework Regions of Human and Murine Immunoglobulins, **230**, 15–20.

Immunoglobulin superfamily
Refinement and Analysis of the Structure of the First Two Domains of Human CD4, **234**, 763–778.

Immunophilin
Atomic Structures of the Human Immunophilin FKBP-12 Complexes with FK506 and Rapamycin, **229**, 105–124.

Immunosuppression
Atomic Structures of the Human Immunophilin FKBP-12 Complexes with FK506 and Rapamycin, **229**, 105–124.
X-ray Structure of a Monomeric Cyclophilin A-Cyclosporin A Crystal Complex at 2·1 Å Resolution, **234**, 1119–1130.

Incompatibility group P
Precise Deletions in Large Bacterial Genomes by Vector-mediated Excision (VEX). The *trfA* Gene of Promiscuous Plasmid RK2 is Essential for Replication in Several Gram-negative Hosts, **230**, 174–185.

Indels
Accommodating Sequence Changes in β-Hairpins in Proteins, **229**, 428–447.

Influenza virus
Crystallization and Preliminary X-ray Studies of Influenza A Virus Neuraminidase of Subtypes N5, N6, N8 and N9, **230**, 345–348.
Three-dimensional Structure of Influenza A N9 Neuraminidase and Its Complex with the Inhibitor 2-Deoxy 2,3-Dehydro-*N*-Acetyl Neuraminic Acid, **232**, 1069–1083.

Influenza virus subtypes
Crystallization and Preliminary X-ray Studies of Influenza A Virus Neuraminidase of Subtypes N5, N6, N8 and N9, **232**, 1069–1083.

Information theory
Information Analysis of Sequences that Bind the Replication Initiator RepA, **233**, 219–230.

Infrared spectroscopy
Secondary Structure and Temperature-induced Unfolding and Refolding of Ribonuclease T_1 in Aqueous Solution. A Fourier Transform Infrared Spectroscopic Study, **232**, 967–981.

Inorganic pyrophosphatase
Purification, Crystallization and Preliminary X-ray Analysis of Inorganic Pyrophosphatase from *Thermus thermophilus*, **232**, 312–313.

Insulin
Comparison of the Dynamics of an Engineered Insulin Monomer and Dimer by Acid-Quenched Amide Proton Exchange. Non-local Stabilization of Interchain Hydrogen Bonds by Dimerization, **230**, 387–394.

Integration host factor
Function of IHF in λ DNA Packaging. I. Identification of the Strong Binding Site for Integration Host Factor and the Locus for Intrinsic Bending in *cosB*, **230**, 492–504.
Function of IHF in λ DNA Packaging. II. Effects of Mutations Altering the IHF Binding Site and the Intrinsic Bend in *cosB* on λ Development, **230**, 505–515.
Genetic and Biochemical Analysis of the Integration Host Factor of *Escherichia coli*, **231**, 646–657.

Integron
Tn*5053*, a Mercury Resistance Transposon with Integron's Ends, **230**, 1103–1107.

Inter-helix distance prediction
Packing of Secondary Structural Elements in Proteins. Analysis and Prediction of Inter-helix Distrances, **233**, 464–479.

Interleukin-5
Crystallization and Preliminary X-ray Diffraction Studies of Recombinant Human Interleukin-5, **229**, 1150–1152.

Interleukin-8
Analysis of the Backbone Dynamics of Interleukin-8 by ^{15}N Relaxation Measurements, **230**, 364–372.

Intermediate filaments
Keratin Intermediate Filament Structure. Crosslinking Studies Yield Quantitative Information on Molecular Dimensions and Mechanism of Assembly, **230**, 436–452.
Separation and Characterization of Homo and Hetero-oligomers of the Intermediate Filament Proteins Desmin and Vimentin, **230**, 837–856.
The Mechanism of Interaction of Filaggrin with Intermediate Filaments. The Ionic Zipper Hypothesis, **232**, 50–66.

Temperature-sensitive Intermediate Filament Assembly. Alternative Structures of *Xenopus laevis* Vimentin *in Vitro* and *in Vivo*, **234**, 99–113.

Intron

A Cluster of Transposon-like Repetitive Sequences in Intron 7 of the Human Dystrophin Gene, **232**, 314–321.

A Shortened Form of the *Tetrahymena thermophila* Group I Intron Can Catalyze the Complete Splicing Reaction *in trans*, **233**, 629–643.

DNA Deletion of Mitochondrial Introns is Correlated with the Process of Senescence in *Podospora anserina*, **234**, 1–7.

Intron Group I

Requirements of a Group I Intron for Reactions at the 3′ Splice Site, **229**, 685–694.

The Conserved Terminal Guanosine of a Group I Intron can Help Prevent Reopening of the Ligated Exons, **232**, 375–385.

Analysis of the Chloroplast Large Subunit Ribosomal RNA Gene from 17 *Chlamydomonas* Taxa, **232**, 446–467.

Monitoring of the Cooperative Unfolding of the *sunY* Group I Intron of Bacteriophage T4. The Active form of the *sunY* Ribozyme is Stabilized by Multiple Interactions with 3′ Terminal Intron Components, **234**, 331–346.

Intron Group IIA

Self-splicing of a *Podospora anserina* Group IIA Intron *in vitro*. Effects of 3′-Terminal Intron Alterations on Cleavage at the 5′ and 3′ Splice Site, **231**, 559–568.

Invertasome

Crystallization and Preliminary X-ray Analysis of the DNA Binding Domain of the Hin Recombinase with Its DNA Binding Site, **232**, 982–986.

Ion channel

Nicotinic Acetylcholine Receptor at 9 Å Resolution, **229**, 1101–1124.

Ionic shielding

Stabilization of Protein Crystals by Electrostatic Interactions as Revealed by a Numerical Approach, **234**, 421–432.

Iron

Asp Ligand Provides the Trigger for Closure of Transferrin Molecules. Direct Evidence from X-ray Scattering Studies of Site-specific Mutants of the N-terminal Half-molecule of Human Transferrin, **231**, 554–558.

X-ray Crystal Structure of Ferric *Aplysia limacina* Myoglobin in Different Liganded States, **233**, 498–508.

Iron center

Structure and Function of the *Escherichia coli* Ribonucleotide Reductase Protein R2, **232**, 123–164.

Isl-1

Redox Regulation of *in Vitro* DNA-binding Activity by the Homeodomain of the Isl-1 Protein, **231**, 945–949.

Isocitrate dehydrogenase

In Vitro Binding of the Pleiotropic Transcriptional Regulatory Protein, FruR, to the *fru*, *pps*, *ace*, *pts* and *icd* Operons of *Escherichia coli* and *Salmonella typhimurium*, **234**, 28–44.

Keratin

Keratin Intermediate Filament Structure. Crosslinking Studies Yield Quantitative Information on Molecular Dimensions and Mechanism of Assembly, **230**, 436–452.

The Mechanism of Interaction of Filaggrin with Intermediate Filaments. The Ionic Zipper Hypothesis, **232**, 50–66.

Kinase

Requirement of Both Kinase and Phosphatase Activities of an *Escherichia coli* Receptor (Taz1) for Ligand-dependent Signal Transduction, **231**, 335–342.

Ligand Binding to the Receptor Domain Regulates the Ratio of Kinase to Phosphatase Activities of the Signaling Domain of the Hybrid *Escherichia coli* Transmembrane Receptor, Taz1, **232**, 484–492.

Ligand Binding Induces an Asymmetrical Transmembrane Signal through a Receptor Dimer, **232**, 493–498.

Kinesin

Sequences of Sea Urchin Kinesin Light Chain Isoforms, **231**, 155–158.

Kinetics

Modulation of P_{RM} Activity by the Lambda P_R Promoter in Both the Presence and Absence of Repressor, **232**, 792–804.

Complementary Large Loops Determine the Rate of RNA Duplex Formation *in Vitro* in the Case of an Effective Antisense RNA Directed Against the Human Immunodeficiency Virus Type 1, **233**, 7–15.

Investigations of Ligand Association and Dissociation Rates in the "Open" and "Closed" States of Myoglobin, **233**, 155–166.

$KMnO_4$ footprinting

Distortion of the DNA Double Helix by RAP1 at Silencers and Multiple Telomeric Binding Sites, **231**, 293–310.

La protein

La Proteins from *Xenopus laevis*. cDNA Cloning and Developmental Expression, **231**, 196–204.

Apo-α-lactalbumin

Are the Molten Globule and the Unfolded States of Apo-α-Lactalbumin Enthalpically Equivalent?, **232**, 5–8.

β-lactamase

Structure of a Phosphonate-inhibited β-Lactamase. An Analog of the Tetrahedral Transition State/Intermediate of β-Lactam Hydrolysis, **234**, 165–178.

Lactate dehydrogenase

Duck Lactate Dehydrogenase B/ε-Crystallin Gene. Lens Recruitment of a GC-promoter, **229**, 849–859.

Molecular Basis of Allosteric Activation of Bacterial L-Lactate Dehydrogenase, **230**, 21–27.

Lactoferrin

Structure of the Recombinant N-Terminal Lobe of Human Lactoferrin at 2·0 Å Resolution, **232**, 1084–1100.

Laminin

Ionic Interactions in the Coiled-coil Domain of Laminin Determine the Specificity of Chain Assembly, **231**, 311–323.

Langevin equation

Effect of Solvent on Collective Motions in Globular Protein, **234**, 1207–1217.

Langevin simulations

How Consistent are Molecular Dynamics Simulations? Comparing Structure and Dynamics in Reduced and Oxidized *Escherichia coli* Thioredoxin, **233**, 766–780.

Langmuir-Blodgett films

New Approach for Atomic Force Microscopy of Membrane Proteins. The Imaging of Cholera Toxin, **229**, 286–290.

Lateral diffusion

Cubic Phases of Lipid-containing Systems. A Translational Diffusion Study by Fluorescence Recovery After Photobleaching, **229**, 517–525.

Lectin
Crystallization and Preliminary X-ray Studies of the Basic Lectin from Winged Bean (*Psophocarpus tetragonolobus*), **229**, 558–560.
Structures of the Lectin IV of *Griffonia simplicifolia* and its Complex with the Lewis b Human Blood Group Determinant at 2·0 Å Resolution, **230**, 950–965.
Crystallographic Refinement and Structure Analysis of the Complex of Wheat Germ Agglutinin with a Bivalent Sialoglycopeptide from Glycophorin A, **232**, 620–638.
Crystallization of the Ribosome Inactivating Protein ML1 from *Viscum album* (Mistletoe) Complexed with β-D-Galactose, **234**, 1279–1281.

Lens
Duck Lactate Dehydrogenase B/ε-Crystallin Gene. Lens Recruitment of a GC-promoter, **229**, 849–859.

Leucine aminopeptidase
Re-refinement of the X-Ray Crystal Structure of Bovine Lens Leucine Aminopeptidase Complexed with Bestatin, **230**, 722–724.

Leucine dehydrogenase
Evolution of Substrate Diversity in the Superfamily of Amino Acid Dehydrogenases. Prospects for Rational Chiral Synthesis, **234**, 938–945.

Leucine zipper
The X-ray Structure of the GCN4-bZIP Bound to ATF/CREB Site DNA Shows the Complex Depends on DNA Flexibility, **233**, 139–154.

Leucine-rich repeat
Crystallization and Preliminary X-ray Analysis of Porcine Ribonuclease Inhibitor, a Protein with Leucine-rich Repeats, **231**, 137–140.
Crystallization of Porcine Liver Ribonuclease Inhibitor a Member of the Family of Leucine-rich Repeats Containing Proteins, **231**, 505–508.

Ligand binding
Refined Structures of the Ligand-binding Domain of the Aspartate Receptor from *Salmonella typhimurium*, **232**, 555–573.
High-Resolution Crystal Structures of Distal Histidine Mutants of Sperm Whale Myoglobin, **234**, 140–155.
Atomic Structure of a Cytochrome *c*′ with an Unusual Ligand-controlled Dimer Dissociation at 1·8 Å Resolution, **234**, 433–445.

Light scattering
Molecular Shape of Vinculin in Aqueous Solution, **229**, 146–152.

Light-harvesting complexes
Two-dimensional Crystallization of the Light-harvesting Complex from *Rhodospirillum rubrum*, **231**, 501–504.

***Limulus* sperm**
Imaging Frozen, Hydrated Acrosomal Bundle from *Limulus* Sperm at 7 Å Resolution with a 400 kV Electron Cryomicroscope, **230**, 384–386.

Linear and cyclic maltodextrins
Crystallization of the Maltodextrin-binding Protein for Active Transport and Chemotaxis in Several Different Liganded and Mutant Forms, **230**, 675–678.

LINE-like elements
Functional Dissection of Two Promoters that Control Sense and Antisense Transcription of *Drosophila melanogaster* F Elements, **234**, 988–997.

Lipase
Preliminary Investigation of Crystals of Lipase I from *Rhizopus niveus*, **229**, 785–786.
1·8 Å Refined Structure of the Lipase from *Geotrichum candidum*, **230**, 575–591.

Lipid
Freeze-fracture Electron Microscope Study of Lipid Systems. The Cubic Phase of Space Group *Pm*3n, **229**, 526–539.
Cubic Phases of Lipid-containing Systems. Elements of a Theory and Biological Connotations, **229**, 540–551.
Projection Image of Smooth Muscle α-Actinin from Two Dimensional Crystals Formed on Positively Charged Lipid Layers, **230**, 196–205.
Lipid-protein Interactions in Crystals of Plant Light-harvesting Complex, **234**, 347–356.

Lipid bilayers
New Approach for Atomic Force Microscopy of Membrane Proteins. The Imaging of Cholera Toxin, **229**, 286–290.

Lipid binding protein
Crystal Structures of Holo and Apo-cellular Retinol-binding Protein II, **230**, 1247–1259.
Lipid-protein Interactions in Crystals of Plant Light-harvesting Complex, **234**, 347–356.

Lipid structure
Cubic Phases of Lipid-containing Systems. Elements of a Theory and Biological Connotations, **229**, 540–551.

***Lipocalin* family**
Functional Expression of the Uncomplexed Serum Retinol-binding Protein in *Escherichia coli*. Ligand Binding and Reversible Unfolding Characteristics, **230**, 725–732.

Lipopolysaccharide
Role of DNA–Protein Interactions in Bacteriophage ΦX174 DNA Injection, **229**, 671–684.

Lipoyl domain
Three-dimensional Structure of the Lipoyl Domain from *Bacillus stearothermophilus* Pyruvate Dehydrogenase Multienzyme Complex, **229**, 1037–1048.

lox
Precise Deletions in Large Bacterial Genomes by Vector-mediated Excision (VEX). The *trfA* Gene of Promiscuous Plasmid RK2 is Essential for Replication in Several Gram-negative Hosts, **230**, 174–185.

Lrp
Lrp, a Global Regulatory Protein of *Escherichia coli*, Binds Co-operatively to Multiple Sites and Activates Transcription of *ilvIH*, **229**, 306–318.

Lysosomal enzymes
Crystallization and Preliminary Crystallographic Studies of Human β-Glucuronidase, **233**, 173–176.

Lysozyme
Structure of Hen Lysozyme in Solution, **229**, 930–944.
Low Energy of Activation for Amide Hydrogen Exchange Reactions in Proteins Supports a Local Unfolding Model, **234**, 234–241.

LysR family
Interactions of NodD at the *nod* Box: NodD Binds to Two Distinct Sites on the Same Face of the Helix and Induces a Bend in the DNA, **233**, 336–348.

M.*MspI*
Effects of Co-factor and Deoxycytidine Substituted Oligonucleotides upon Sequence-specific Interactions between *Msp*I DNA Methyltransferase and DNA, **230**, 779–786.

Macrofibrils
The Mechanism of Interaction of Filaggrin with Intermediate Filaments. The Ionic Zipper Hypothesis, **232**, 50–66.

α2-macroglobulin
Three-dimensional Architecture of Human α2-Macroglobulin Transformed with Methylamine, **232**, 522–529.

Macromolecular assembly
Evidence Indicating that the Human Proteasome is a Complex Dimer, **229**, 14–19.
Refined Structure of the Pyruvoyl-dependent Histidine Decarboxylase from *Lactobacillus* 30a, **230**, 516–528.
Domain Closure in Lactoferrin. Two Hinges Produce a See-saw Motion Between Alternative Close-packed Interfaces, **234**, 357–372.

Thermodynamic Studies of the Collagen-like Region of Human Subcomponent C1q. A Water-containing Structural Model, **234**, 654–660.

Magnaporthe grisea

Preliminary Crystallographic Studies on Scytalone Dehydratase from *Magnaporthe grisea*, **232**, 999–1002.

Maize

Characterization of a Multigene Family Encoding an Exopolygalacturonase in Maize, **229**, 797–801.

Major histocompatibility complex

Computing the Structure of Bound Peptides. Application to Antigen Recognition by Class I Major Histocompatibility Complex Receptors, **234**, 515–521.

Malate dehydrogenase

Crystal Structure of a Ternary Complex of *Escherichia coli* Malate Dehydrogenase Citrate and NAD at 1·9 Å Resolution, **232**, 213–222.

Maltodextrin binding protein

Crystallization of the Maltodextrin-binding Protein for Active Transport and Chemotaxis in Several Different Liganded and Mutant Forms, **230**, 675–678.

Maltosaccharide uptake

Structure of the Maltodextrin-uptake Locus of *Streptococcus pneumoniae*. Correlation to the *Escherichia coli* Maltose Regulon, **230**, 800–811.

Maltose

Structure of the Maltodextrin-uptake Locus of *Streptococcus pneumoniae*. Correlation to the *Escherichia coli* Maltose Regulon, **230**, 800–811.

Genetic Analysis of Periplasmic Binding Protein Dependent Transport in *Escherichia coli*. Each Lobe of Maltose-binding Protein Interacts with a Different Subunit of the $MalFGK_2$ Membrane Transport Complex, **233**, 659–670.

MAP kinases

Crystallization and Preliminary X-ray Studies of Extracellular Signal-regulated Kinase-2/MAP Kinase with an Incorporated His-tag, **233**, 550–552.

Mass spectroscopy

Crystallization of Bovine Adrenodoxin Reductase in a New Unit Cell and Its Crystallographic Characterization, **234**, 245–248.

Membrane

Structural Studies of the Enveloped dsRNA Bacteriophage $\phi 6$ of *Pseudomonas syringae* by Raman Spectroscopy. I. The Virion and Its Membrane Envelope, **230**, 461–472.

Human Erythrocyte Band 3. Solubilization and Reconstitution into Two-dimensional crystals, **231**, 119–132.

Two-dimensional Crystallization of the Light-harvesting Complex from *Rhodospirillum rubrum*, **231**, 501–504.

Characterization of the *Neisseria* Iga_β-core, **234**, 579–593.

Molecular Cloning of a P-type ATPase Gene from the Cyanobacterium *Synechocystis* sp. PCC 6803. Homology to Eukaryotic Ca^{2+}-ATPases, **234**, 1284–1289.

Membrane channel

Porin Conformation in the Absence of Calcium. Refined Structure at 2·5 Å Resolution, **231**, 817–824.

Membrane insertion

Fluorescence Energy Transfer Distance Measurements. The Hydrophobic Helical Hairpin of Colicin A in the Membrane Bound State, **230**, 1055–1067.

Membrane protein

Crystallization and Preliminary X-ray Diffraction Analysis of ScrY, a Specific Bacterial Outer Membrane Porin, **229**, 258–262.

New Approach for Atomic Force Microscopy of Membrane Proteins. The Imaging of Cholera Toxin, **229**, 286–290.

Non-random Distribution of Amino Acids in the Transmembrane Segments of Human Type I Single Span Membrane Proteins, **229**, 602–608.

Crystallization and Preliminary X-ray Analysis of the Periplasmic Fragment of CyoA–a Subunit of the *Escherichia coli* Cytochrome *o* Complex, **229**, 794–796.

Function-based Mapping of the Yeast Mitochondrial ADP/ATP Translocator by Selection for Second Site Revertants, **230**, 1171–1182.

New Crystal Form of the Photosynthetic Reaction Centre from *Rhodobacter sphaeroides* of Improved Diffraction Quality, **230**, 1311–1314.

Porin Conformation in the Absence of Calcium. Refined Structure at 2·5 Å Resolution, **231**, 817–824.

Quadratic Minimization of Predictors for Protein Secondary Structure. Application to Transmembrane α-Helices, **232**, 165–191.

Crystallization of a Genetically Engineered Water-soluble Primary Penicillin Target Enzyme. The High Molecular Mass PBP2x of *Streptococcus pneumoniae*, **232**, 1007–1009.

fd Coat Protein Structure in Membrane Environments, **233**, 447–463.

Orthorhombic Crystal Form of Bacteriorhodopsin Nucleated on Benzamidine Diffracting to 3·6 Å Resolution, **234**, 156–164.

A *Drosophila* Gene Encoding an Epithelial Membrane Protein with Homology to CD36/LIMP II, **234**, 249–253.

Lipid-protein Interactions in Crystals of Plant Light-harvesting Complex, **234**, 347–356.

Membrane topology

Assembly of Multimeric Proteins. Effect of Mutations in the α-Subunit on Membrane Assembly and Activity of Pyridine Nucleotide Transhydrogenase, **234**, 8–13.

Metal binding

Conformational and Nucleic Acid Binding Studies on the Synthetic Nucleocapsid Protein of HIV-1, **229**, 94–104.

Metal-induced Conformational Changes in Transferrins, **229**, 585–590.

The Crystal Structure of Tris-inhibited Phospholipase C from *Bacillus cereus* at 1·9 Å Resolution. The Nature of the Metal Ion in Site 2, **231**, 870–876.

Metalloproteinase

Refined 1·8 Å X-ray Crystal Structure of Astacin, a Zinc-endopeptidase from the Crayfish *Astacus astacus* L. Structure Determination, Refinement, Molecular Structure and Comparison with Thermolysin, **229**, 945–968.

Crystallization and Preliminary X-ray Analysis of a Truncated Tissue Metalloproteinase Inhibitor $\Delta_{128\text{–}194}$ TIMP-2, **229**, 1163–1164.

Crystallization and Preliminary X-ray Studies of a Protease from *Pseudomonas aeruginosa*, **230**, 1315–1316.

Methionyl-tRNA synthetase

Critical Role of the Acceptor Stem of $tRNAs^{Met}$ in their Aminoacylation by *Escherichia coli* Methionyl-tRNA Synthetase, **229**, 26–36.

Methoxyamine

Molecular Basis for Methoxyamine-initiated Mutagenesis: ^1H Nuclear Magnetic Resonance Studies of Oligonucleotide Duplexes Containing Base-modified Cytosine Residues, **230**, 1068–1076.

O^6-methylguanine

Factors Influencing the Repair of the Mutagenic Lesion O^6-methylguanine in DNA by Human O^6-methylguanine-DNA Methyltransferase, **231**, 950–959.

2-methylthio-N^6-isopentenyladenosine

UGA Codon Context Which Spans Three Codons. Reversal by ms^2i^6A37 in tRNA, Mutation in *rpsD*(S4) or Streptomycin, **232**, 1017–1029.

Methyltransferase

DNA Recognition by the *Eco*K Methyltransferase. The Influence of DNA Methylation and the Cofactor *S*-adenosyl-L-methionine, **234**, 60–71.

MFOLD
A Two-dimensional Model at the Nucleotide Level for the Central Hairpin of Coliphage Qβ RNA, **233**, 245–260.

MHC Class II
Two-dimensional Nuclear Magnetic Resonance Analysis of a Labeled Peptide Bound to a Class II Major Histocompatibility Complex Molecule, **232**, 342–350.

Micrococcus luteus
Unassigned or Nonsense Codons in *Micrococcus luteus*, **230**, 51–56.

Microfilaments
Molecular Shape of Vinculin in Aqueous Solution, **229**, 146–152.

Microtubules
Sequence and Structure of a New Coiled Coil Protein from a Microtubule Bundle in *Giardia*, **231**, 521–530.

Mistletoe
Crystallization of the Ribosome Inactivating Protein ML1 from *Viscum album* (Mistletoe) Complexed with β-D-Galactose, **234**, 1279–1281.

Mithramycin
Nuclear Magnetic Resonance Comparison of the Binding Sites of Mithramycin and Chromomycin on the Self-complementary Oligonucleotide $d(ACCCGGGT)_2$. Evidence that the Saccharide Chains have a role in Sequence Specificity, **231**, 753–767.

Mitochondria
Nuclear Control of the Messenger RNA Expression for Mitochondrial ATPase Subunit 9 in a New Yeast Mutant, **229**, 909–916.
Structure of the Maize Mitochondrial Replicon RNA *b* and Its Relationship with Other Autonomously Replicating RNA Species, **230**, 757–765.
MSS1, a Nuclear-encoded Mitochondrial GTPase Involved in the Expression of COX1 Subunit of Cytochrome *c* Oxidase, **232**, 79–88.
Nucleotide Sequence Requirements for Self-cleavage of *Neurospora* VS RNA, **232**, 351–361.
Two Inactive Fragments Derived from the Yeast Mitochondrial Ribosomal Protein MrpS28 Function *in Trans* to Support Ribosome Assembly and Respiratory Growth, **233**, 597–605.
Derivatives of the Yeast Mitochondrial Ribosomal Protein MrpS28 Replace Ribosomal Protein S15 as Functional Components of the *Escherichia coli* Ribosome, **233**, 606–614.
DNA Deletion of Mitochondrial Introns is Correlated with the Process of Senescence in *Podospora anserina*, **234**, 1–7.

Mitochondrial
Nuclear Control of the Messenger RNA Expression for Mitochondrial ATPase Subunit 9 in a New Yeast Mutant, **229**, 909–916.

Mitoribosomes
MSS1, a Nuclear-encoded Mitochondrial GTPase Involved in the Expression of COX1 Subunit of Cytochrome *c* Oxidase, **232**, 79–88.

Mnt protein
Specificity of the Mnt Protein. Independent Effects of Mutations at Different Positions in the Operator, **229**, 821–826.

Modified bases
Molecular Basis for Methoxyamine-initiated Mutagenesis: ^1H Nuclear Magnetic Resonance Studies of Oligonucleotide Duplexes Containing Base-modified Cytosine Residues, **230**, 1068–1076.

Modified nucleosides
Overproduction and Purification of Native and Queuine-lacking *Escherichia coli* $tRNA^{Asp}$. Role of the Wobble Base in $tRNA^{Asp}$ Acylation, **234**, 965–974.

Molecular chaperone
Two-dimensional Crystals of the Molecular Chaperone GroEL Reveal Structural Plasticity, **229**, 579–584.
Thermodynamic and Structural Analysis of the Folding/Unfolding Transitions of the *Escherichia coli* Molecular Chaperone DnaK, **232**, 680–692.

Molecular dynamics
High-resolution Three-dimensional Structure of Ribonuclease A in Solution by Nuclear Magnetic Resonance Spectroscopy, **229**, 722–734.
Hydration of Proteins. A Comparison of Experimental Residence Times of Water Molecules Solvating the Bovine Pancreatic Trypsin Inhibitor with Theoretical Model Calculations, **231**, 1040–1048.
Protein Unfolding Pathways Explored Through Molecular Dynamics Simulations, **232**, 600–619.
How Consistent are Molecular Dynamics Simulations? Comparing Structure and Dynamics in Reduced and Oxidized *Escherichia coli* Thioredoxin, **233**, 766–780.
Molecular Dynamics with Weighted Time-averaged Restraints for a DNA Octamer. Dynamic Interpretation of Nuclear Magnetic Resonance Data, **234**, 373–389.
A Structure Refinement Method Based on Molecular Dynamics in Four Spatial Dimensions, **234**, 751–762.
Refinement of the F-Actin Model against X-ray Fiber Diffraction Data by the Use of a Directed Mutation Algorithm, **234**, 826–836.
Solution Structure of a Parallel-stranded G-Quadruplex DNA, **234**, 1171–1183.
Effect of Solvent on Collective Motions in Globular Protein, **234**, 1207–1217.

Molecular replacement
Structural Patterns at Residue Positions 9, 18, 67 and 82 in the V_H Framework Regions of Human and Murine Immunoglobulins, **230**, 15–20.
Three-dimensional Structure of Lipoamide Dehydrogenase from *Pseudomonas fluorescens* at 2·8 Å Resolution. Analysis of Redox and Thermostability Properties, **230**, 1200–1215.
Trypanosoma cruzi Trypanothione Reductase. Crystallization, Unit Cell Dimensions and Structure Solution, **232**, 1217–1220.
Crystallization and X-ray Analysis of a Multienzyme Complex Containing RUBISCO and RuBP, **234**, 1274–1278.

Molten globule
Molten Globule of Cytochrome *c* Studied by Small Angle X-ray Scattering, **229**, 591–596.
Guanidine Hydrochloride-induced Folding of Proteins, **231**, 180–184.
Are the Molten Globule and the Unfolded States of Apo-α-Lactalbumin Enthalpically Equivalent?, **232**, 5–8.
Protein Unfolding Pathways Explored Through Molecular Dynamics Simulations, **232**, 600–619.
The Phase Transition between a Compact Denatured State and a Random Coil State in Staphylococcal Nuclease is First-Order, **232**, 718–724.
Further Examination of the Intermediate State in the Denaturation of the Tryptophan Synthase α Subunit. Evidence that the Equilibrium Denaturation Intermediate is a Molten Globule, **234**, 1197–1206.

Monellin
Two Crystal Structures of a Potently Sweet Protein. Natural Monellin at 2·75 Å Resolution and Single-Chain Monellin at 1·7 Å Resolution, **234**, 390–404.

Monte Carlo method
Monte Carlo Analysis of the Conformation of DNA Catenanes, **232**, 1130–1140.
Refinement of the F-Actin Model against X-ray Fiber Diffraction Data by the Use of a Directed Mutation Algorithm, **234**, 826–836.

MotA protein
The MotA Protein from Bacteriophage T4 Contains Two Domains. Prelimiary Structural Analysis by X-ray Diffraction and Nuclear Magnetic Resonance, **232**, 301–304.

Motility
Significance of Duplicated Flagellin Genes in *Campylobacter*, **230**, 359–363.
Crystallization of the Motile Major Sperm Protein (MSP) of the Nematode *Ascaris suum*, **232**, 298–300.

Motor protein
A Myosin-like Protein from a Higher Plant, **231**, 148–154.

mRNA
Co-existing Structures of an mRNA Stability Determinant. The 5′ Region of the *Escherichia coli* and *Serratia marcescens ompA* mRNA, **229**, 656–670.
Nuclear Control of the Messenger RNA Expression for Mitochondrial ATPase Subunit 9 in a New Yeast Mutant, **229**, 909–916.
Dual Role of the Sequence-specific Bacteriophage T4 Endoribonuclease RegB. mRNA Inactivation and mRNA Destabilization, **233**, 429–446.
The Role of RNA Structure in Determining RNase E-dependent Cleavage Sites in the mRNA for Ribosomal Protein S20 *in vitro*, **234**, 998–1012.

mRNA Decay
Co-existing Structures of an mRNA Stability Determinant. The 5′ Region of the *Escherichia coli* and *Serratia marcescens ompA* mRNA, **229**, 656–670.

Mucopolysaccharidosis
Crystallization and Preliminary Crystallographic Studies of Human β-Glucuronidase, **233**, 173–176.

Multi-copper enzyme
X-ray Structures and Mechanistic Implications of Three Functional Derivatives of Ascorbate Oxidase from Zucchini. Reduced, Peroxide and Azide Forms, **230**, 997–1014.

Multienzyme complex
Refined Crystal Structure of the Catalytic Domain of Dihydrolipoyl Transacetylase (E2p) from *Azotobacter vinelandii* at 2·6 Å Resolution, **230**, 1183–1199.

Multigene family
Characterization of a Multigene Family Encoding an Exopolygalacturonase in Maize, **229**, 797–801.
Two Secretory Protein Genes in *Chironomus tentans* Have Arisen by Gene Duplication and Exhibit Different Developmental Expression Patterns, **231**, 324–334.

Muscarinic toxin
A Toxin that Recognizes Muscarinic Acetylcholine Receptors. Perparation and Characterization of Crystals Suitable for Structural Analysis, **232**, 997–998.

Muscle
Calcium Ions and the Structure of Muscle Actin Filament. An X-ray Diffraction Study, **229**, 279–285.
An X-ray Diffraction Study of Frog Skeletal Muscle during Shortening Near the Maximum Velocity, **231**, 668–677.
Turnover of Fluorescent Nucleoside Triphosphates by Isolated Immobilized Myosin Filaments, **234**, 114–123.

Mutagenesis
Similar Hydrophobic Replacements of Leu99 and Phe153 within the Core of T4 Lysozyme Have Different Structural and Thermodynamic Consequences, **229**, 747–769.
Base-pair Induced Shifts in the Tautomeric Equilibrium of a Modified DNA Base, **230**, 6–10.
Zinc Finger Mutations that Alter Domain Interactions in the Glucocorticoid Receptor, **230**, 124–136.
Molecular Basis for Methoxyamine-initiated Mutagenesis: ^{1}H Nuclear Magnetic Resonance Studies of Oligonucleotide Duplexes Containing Base-modified Cytosine Residues, **230**, 1068–1076.
Three-dimensional Structure of Lipoamide Dehydrogenase from *Pseudomonas fluorescens* at 2·8 Å Resolution. Analysis of Redox and Thermostability Properties, **230**, 1200–1215.
Mutation Ala2 → Ser Destabilizes Intersubunit Interactions in the Molecular Chaperone GroEL, **231**, 58–64.
Clustered Arginine Residues of Bacteriophage λ N Protein are Essential to Antitermination of Transcription, but Their Locale Cannot Compensate for *boxB* Loop Defects, **231**, 343–360.
Empirical Scale of Side-chain Conformational Entropy in Protein Folding, **231**, 825–839.
GAG Triplets as Splice Acceptors of Last Resort. An Unusual Form of Alternative Splicing in Prothymosin α Pre-mRNA, **234**, 281–288.
Comparison of a Structural and a Functional Epitope, **234**, 554–563.
Affinity Maturation of Human Growth Hormone by Monovalent Phage Display, **234**, 564–578.
Crystal Structural Analysis of Mutations in the Hydrophobic Cores of Barnase, **234**, 847–860.
The Contribution of Contact and Non-contact Residues of Antibody in the Affinity of Binding to Antigen. The Interaction of Mutant D1.3 Antibodies with Lysozyme, **234**, 958–964.

Mutagenesis, cassette
Hydropathy and Molar Volume Constraints on Combinatorial Mutants of the Photosynthetic Reaction Center, **232**, 242–252.
Mutagenesis of the P-loop Motif in the ATP Binding Site of the RecA Protein from *Escherichia coli*, **232**, 1048–1059.

Mutagenesis, second-site revertants
Function-based Mapping of the Yeast Mitochondrial ADP/ATP Translocator by Selection for Second Site Revertants, **230**, 1171–1182.

Mutagenesis site-directed
Functional Interactions among the His40, Glu58 and His92 Catalysts of Ribonuclease T_1 as Studied by Double and Triple Mutants, **229**, 770–781.
Requirement for a Disulfide Bridge Near the Reactive Site of Protease Inhibitor SSI (*Streptomyces* Subtilisin Inhibitor) for its Inhibitory Action, **230**, 395–399.
Site-directed Mutagenesis of the Yeast Mitochondrial ADP/ATP Translocator. Six Arginines and One Lysine are Essential, **230**, 1159–1170.
A Mutagenic Study of the Allosteric Linkage of His(HC3)146β in Haemoglobin, **230**, 1291–1296.
Asp Ligand Provides the Trigger for Closure of Transferrin Molecules. Direct Evidence from X-ray Scattering Studies of Site-specific Mutants of the N-terminal Half-molecule of Human Transferrin, **231**, 554–558.
Mapping of the Zinc Binding Domain of *Escherichia coli* Methionyl-tRNA Synthetase, **231**, 1068–1077.
High-Resolution Crystal Structures of Distal Histidine Mutants of Sperm Whale Myoglobin, **234**, 140–155.
Contribution of Buried Hydrogen Bonds to Protein Stability. The Crystal Structures of Two Barnase Mutants, **234**, 1158–1170.

Mutation
X-ray Structures of the Antigen-Binding Domains from Three Variants of Humanized anti-p185^{HER2} Antibody 4D5 and Comparison with Molecular Modeling, **229**, 969–995.

Mutations
Improbability of General Antimutators, **229**, 8–13.
Accommodating Sequence Changes in β-Hairpins in Proteins, **229**, 428–447.
Analysis of Mutations Occurring at the Human *hprt* Locus, **231**, 41–57.

Myelin Protein
Crystallographic Studies on a Family of Cellular Lipophilic Transport Proteins. Refinement of P2 Myelin Protein and the Structure Determination and Refinement of Cellular Retinol-binding Protein in Complex with All-*trans*-retinol, **230**, 1225–1246.

Myoglobin
Investigations of Ligand Association and Dissociation Rates in the "Open" and "Closed" States of Myoglobin, **233**, 155–166.
High-Resolution Crystal Structures of Distal Histidine Mutants of Sperm Whale Myoglobin, **234**, 140–155.

Myosin
A Myosin-like Protein from a Higher Plant, **231**, 148–154.
Crossbridges in the Complete Unit Cell of Rigor Insect Flight Muscle Imaged by Three-dimensional Reconstruction from Oblique Sections, **233**, 86–108.
Turnover of Fluorescent Nucleoside Triphosphates by Isolated Immobilized Myosin Filaments, **234**, 114–123.

NAD
Crystal Structure of a Ternary Complex of *Escherichia coli* Malate Dehydrogenase Citrate and NAD at 1·9 Å Resolution, **232**, 213–222.

NAD$^+$ binding
Refined Structure of *Escherichia coli* Heat-labile Enterotoxin, a Close Relative of Cholera Toxin, **230**, 890–918.

NADH : Ubiquinone oxidoreductase
The Gene Locus of the Proton-translocating NADH : Ubiquinone Oxidoreductase in *Escherichia coli*. Organization of the 14 Genes and Relationship Between the Derived Proteins and Subunits of Mitochondrial Complex I, **233**, 109–122.

NADH oxidase
Crystallization and Preliminary X-ray Diffraction Studies of a NADH Oxidase from *Thermus thermophilus* HB8, **230**, 1086–1088.

NADP-binding protein
Crystal Parameters of an Alcohol Dehydrogenase from the Extreme Thermophile *Thermoanaerobium brockii*, **230**, 353–355.

NAD(P)H
Structural Differences between Wild-type NADP-dependent Glutathione Reductase from *Escherichia coli* and a Redesigned NAD-dependent Mutant, **231**, 191–195.

Naproxen
Preliminary X-ray Study of Naproxen Esterase from *Bacillus subtilis*, **230**, 681–683.

Neuraminidase
Crystallization and Preliminary X-ray Studies of Influenza A Virus Neuraminidase of Subtypes N5, N6, N8 and N9, **230**, 345–348.
Three-dimensional Structure of Influenza A N9 Neuraminidase and Its Complex with the Inhibitor 2-Deoxy 2,3-Dehydro-*N*-Acetyl Neuraminic Acid, **232**, 1069–1083.

Neurotoxin
Three-dimensional Structure in Solution of the Calcium Channel Blocker ω-Conotoxin, **234**, 405–420.

Neutron diffraction
The *in Vivo* Glycation of Diabetic Tendon Collagen Studied by Neutron Diffraction, **230**, 1297–1303.
Configurational Distribution of Denatured Phosphoglycerate Kinase, **231**, 840–848.

NF-κB
κB-like Motifs Regulate the Induction of Immune Genes in *Drosophila*, **232**, 327–333.

N-glycosidase
Purification and Crystallization of Shiga Toxin from *Shigella dysenteriae*, **232**, 704–706.

Nitrite reductase
Crystallization and Preliminary Crystallographic Study of Cytochrome cd_1 Nitrite Reductase from *Thiosphaera pantotropha*, **232**, 1211–1212.

Nitrogenase
A Superfamily of ATPases with Diverse Functions Containing Either Classical or Deviant ATP-binding Motif, **229**, 1165–1174.

NTPase
A Superfamily of ATPases with Diverse Functions Containing Either Classical or Deviant ATP-binding Motif, **229**, 1165–1174.

NTP-binding motif
A Superfamily of ATPases with Diverse Functions Containing Either Classical or Deviant ATP-binding Motif, **229**, 1165–1174.

NTRC protein
Glutamate at the Site of Phosphorylation of Nitrogen-regulatory Protein NTRC Mimics Aspartyl-Phosphate and Activates the Protein, **232**, 67–78.

Nuclear magnetic resonance
Nuclear Magnetic Resonance Study of a Deoxyoligonucleotide Duplex Containing a Three Base Bulge, **229**, 173–188.
Solution Structure of a Variant of Human Pancreatic Secretory Trypsin Inhibitor Determined by Nuclear Magnetic Resonance Spectroscopy, **229**, 695–706.
Refined Solution Structures of the *Escherichia coli trp* Holo-and Aporepressor, **229**, 735–746.
Structure of Hen Lysozyme in Solution, **229**, 930–944.
Three-dimensional Structure of the Lipoyl Domain from *Bacillus stearothermophilus* Pyruvate Dehydrogenase Multienzyme Complex, **229**, 1037–1048.
Partially Folded Conformation of the (30-51) Intermediate in the Disulphide Folding Pathway of Bovine Pancreatic Trypsin Inhibitor. ^{1}H and ^{15}N Resonance Assignments and Determination of Backbone Dynamics from ^{15}N Relaxation Measurements, **229**, 1125–1146.
Base-pair Induced Shifts in the Tautomeric Equilibrium of a Modified DNA Base, **230**, 6–10.
Local Structure Due to an Aromatic–Amide Interaction Observed by ^{1}H-Nuclear Magnetic Resonance Spectroscopy in Peptides Related to the N Terminus of Bovine Pancreatic Trypsin Inhibitor, **230**, 312–322.
The High-resolution Structure of the Peripheral Subunit-binding Domain of Dihydrolipoamide Acetyltransferase from the Pyruvate Dehydrogenase Multienzyme Complex of *Bacillus stearothermophilus*, **230**, 323–341.
Structural Deviations at CpG Provide a Plausible Explanation for the High Frequency of Mutation at This Site. Phosphorus Nuclear Magnetic Resonance and Circular Dichroism Studies, **230**, 373–378.
Comparison of the Dynamics of an Engineered Insulin Monomer and Dimer by Acid-Quenched Amide Proton Exchange. Non-local Stabilization of Interchain Hydrogen Bonds by Dimerization, **230**, 387–394.
Determination of Individual Rate Constants k_1 and k_2 in Hen Egg-white Lysozyme. The Opening and Closing reactions in the Linderstrøm-Lang Model for Amide/Solution Hydrogen Exchange in Proteins, **230**, 651–660.
Molecular Basis for Methoxyamine-initiated Mutagenesis: ^{1}H Nuclear Magnetic Resonance Studies of Oligonucleotide Duplexes Containing Base-modified Cytosine Residues, **230**, 1068–1076.
Three-dimensional Structure of the Complex between Acyl-Coenzyme A Binding Protein and Palmitoyl-Coenzyme A, **230**, 1260–1277.
Exploring the Limits of Precision and Accuracy of Protein Structures Determined by Nuclear Magnetic Resonance Spectroscopy, **231**, 82–102.
Two-dimensional ^{1}H Nuclear Magnetic Resonance Studies of the Half-saturated $(Ca^{2+})_1$ State of Calbindin D_{9k}. Further Implications for the Molecular Basis of Cooperative Ca^{2+} binding, **231**, 415–430.
High-resolution Solution Structure of Calcium-loaded Calbindin D_{9k}, **231**, 711–734.

Nuclear Magnetic Resonance Comparison of the Binding Sites of Mithramycin and Chromomycin on the Self-complementary Oligonucleotide d(ACCCGGGT)$_2$. Evidence that the Saccharide Chains have a role in Sequence Specificity, **231**, 753–767.

Nuclear Magnetic Resonance Solution Structure of the Pheromone E*r*-10 from the Ciliated Protozoan *Euplotes raikovi*, **231**, 800–816.

Solution Nuclear Magnetic Resonance Determination of Active Site Structure for a Paramagnetic Protein: Cyanomet *Aplysia* Myoglobin, **231**, 1009–1023.

Methionyl-tRNA Synthetase Zinc Binding Domain. Three-dimensional Structure and Homology with Rubredoxin and *gag* Retroviral Proteins, **231**, 1078–1089.

Production and Characterization of an Antibody Fv Fragment ^{15}N-Labeled in the V_L Domain Only, **232**, 15–22.

Solution Structure of a Pair of Complement Modules by Nuclear Magnetic Resonance, **232**, 268–284.

The MotA Protein from Bacteriophage T4 Contains Two Domains. Prelimiary Structural Analysis by X-ray Diffraction and Nuclear Magnetic Resonance, **232**, 301–304.

Determination of the Disulphide Bonding Pattern in Proteins by Local and Global Analysis of Nuclear Magnetic Resonance Data. Application to Flavoridin, **232**, 897–906.

The Nuclear Magnetic Resonance Solution Structure of Flavoridin, an Antagonist of the Platelet GP IIb-IIIa Receptor, **232**, 907–925.

An Efficient Procedure for Assignment of the Proton, Carbon and Nitrogen Resonances in ^{13}C/^{15}N Labeled Nucleic Acids, **232**, 1141–1156.

A Two-dimensional Model at the Nucleotide Level for the Central Hairpin of Coliphage Qβ RNA, **233**, 245–260.

Identification of the Contact Surface of a Streptococcal Protein G Domain Complexed with a Human Fc Fragment, **233**, 331–335.

Origin of the Asymmetrical Contact between *lac* Repressor and *lac* Operator DNA, **233**, 389–399.

fd Coat Protein Structure in Membrane Environments, **233**, 447–463.

Structure of a DNA:RNA Hybrid Duplex. Why RNase H Does Not Cleave Pure RNA, **233**, 509–523.

Nuclear Magnetic Resonance Structural Studies of A·AT Base Triple Alignments in Intramolecular Purine·Purine·Pyrimidine DNA Triplexes in Solution, **234**, 188–197.

Low Energy of Activation for Amide Hydrogen Exchange Reactions in Proteins Supports a Local Unfolding Model, **234**, 234–241.

Molecular Dynamics with Weighted Time-averaged Restraints for a DNA Octamer. Dynamic Interpretation of Nuclear Magnetic Resonance Data, **234**, 373–389.

Three-dimensional Structure in Solution of the Calcium Channel Blocker ω-Conotoxin, **234**, 405–420.

Structure of the Complex of *lac* Repressor Headpiece and an 11 Base-pair Half-operator Determined by Nuclear Magnetic Resonance Spectroscopy and Restrained Molecular Dynamics, **234**, 446–462.

Dissecting the Structure of a Partially Folded Protein. Circular dichroism and Nuclear Magnetic Resonance Studies of Peptides from Ubiquitin, **234**, 483–492.

Nuclear Magnetic Resonance Solution Structure of Dendrotoxin K from the Venom of *Dendroaspis polylepis polylepis*, **234**, 735–750.

Local Conformations of Peptides Representing the Entire Sequence of Bovine Pancreatic Trypsin Inhibitor and Their Roles in Folding, **234**, 861–878.

The Structures of Native Phosphorylated Chicken Cystatin and of a Recombinant Unphosphorylated Variant in Solution, **234**, 1048–1059.

Conformational Variability of Chicken Cystatin. Comparison of Structures Determined by X-ray Diffraction and NMR Spectroscopy, **234**, 1060–1069.

Nuclear Magnetic Resonance Spectroscopy of a DNA Complex with the Uniformly ^{13}C-Labeled *Antennapedia* Homeodomain and Structure Determination of the DNA-bound Homeodomain, **234**, 1070–1083.

Determination of the Nuclear Magnetic Resonance Solution Structure of an *Antennapedia* Homeodomain–DNA Complex, **234**, 1084–1097.

Solution Structure of a Parallel-stranded G-Quadruplex DNA, **234**, 1171–1183.

Further Examination of the Intermediate State in the Denaturation of the Tryptophan Synthase α Subunit. Evidence that the Equilibrium Denaturation Intermediate is a Molten Globule, **234**, 1197–1206.

Nuclear magnetic resonance ^{13}C

Three-dimensional Structure of the Complex between Acyl-Coenzyme A Binding Protein and Palmitoyl-Coenzyme A, **230**, 1260–1277.

An Efficient Procedure for Assignment of the Proton, Carbon and Nitrogen Resonances in ^{13}C/^{15}N Labeled Nucleic Acids, **232**, 1141–1156.

Nuclear magnetic resonance ^{13}C-labelling

Two-dimensional Nuclear Magnetic Resonance Analysis of a Labeled Peptide Bound to a Class II Major Histocompatibility Complex Molecule, **232**, 342–350.

Nuclear Magnetic Resonance Spectroscopy of a DNA Complex with the Uniformly ^{13}C-Labeled *Antennapedia* Homeodomain and Structure Determination of the DNA-bound Homeodomain, **234**, 1070–1083.

Determination of the Nuclear Magnetic Resonance Solution Structure of an *Antennapedia* Homeodomain–DNA Complex, **234**, 1084–1097.

Nuclear magnetic resonance ^{15}N labelling

Three-dimensional Structure of the Complex between Acyl-Coenzyme A Binding Protein and Palmitoyl-Coenzyme A, **230**, 1260–1277.

Nuclear magnetic resonance assignment

An Efficient Procedure for Assignment of the Proton, Carbon and Nitrogen Resonances in ^{13}C/^{15}N Labeled Nucleic Acids, **232**, 1141–1156.

Nuclear magnetic resonance complete relaxation matrix analysis

High-resolution Three-dimensional Structure of Ribonuclease A in Solution by Nuclear Magnetic Resonance Spectroscopy, **229**, 722–734.

Nuclear magnetic resonance fluorine-19

Bacteriophage T7 RNA Polymerase. ^{19}F-Nuclear Magnetic Resonance Observations at 5-Fluorouracil-substituted Promoter DNA and RNA Transcript, **232**, 105–122.

Origin of the Asymmetrical Contact between *lac* Repressor and *lac* Operator DNA, **233**, 389–399.

Nuclear magnetic resonance heteronuclear

Analysis of the Backbone Dynamics of Interleukin-8 by ^{15}N Relaxation Measurements, **230**, 364–372.

Identification of the Contact Surface of a Streptococcal Protein G Domain Complexed with a Human Fc Fragment, **233**, 331–335.

Nuclear Magnetic Resonance Spectroscopy of a DNA Complex with the Uniformly ^{13}C-Labeled *Antennapedia* Homeodomain and Structure Determination of the DNA-bound Homeodomain, **234**, 1070–1083.

Nuclear magnetic resonance Isotope-edited

Two-dimensional Nuclear Magnetic Resonance Analysis of a Labeled Peptide Bound to a Class II Major Histocompatibility Complex Molecule, **232**, 342–350.

Nuclear magnetic resonance Nitrogen-15 labelling

An Efficient Procedure for Assignment of the Proton, Carbon and Nitrogen Resonances in ^{13}C/^{15}N Labeled Nucleic Acids, **232**, 1141–1156.

Nuclear magnetic resonance NOE

Three-dimensional Structure of the Complex between Acyl-Coenzyme A Binding Protein and Palmitoyl-Coenzyme A, **230**, 1260–1277.

Exploring the Limits of Precision and Accuracy of Protein Structures Determined by Nuclear Magnetic Resonance Spectroscopy, **231**, 82–102.
A Structure Refinement Method Based on Molecular Dynamics in Four Spatial Dimensions, **234**, 751–762.

Nuclear magnetic resonance NOE constraints
High-resolution Three-dimensional Structure of Ribonuclease A in Solution by Nuclear Magnetic Resonance Spectroscopy, **229**, 722–734.

Nuclear magnetic resonance susceptibility tensor
Solution Nuclear Magnetic Resonance Determination of Active Site Structure for a Paramagnetic Protein: Cyanomet *Aplysia* Myoglobin, **231**, 1009–1023.

Nuclear magnetic resonance two-dimensional
High-resolution Three-dimensional Structure of Ribonuclease A in Solution by Nuclear Magnetic Resonance Spectroscopy, **229**, 722–734.
Structural Deviations at CpG Provide a Plausible Explanation for the High Frequency of Mutation at This Site. Phosphorus Nuclear Magnetic Resonance and Circular Dichroism Studies, **230**, 373–378.

Nuclear Overhauser Effect
Structure of Hen Lysozyme in Solution, **229**, 930–944.

Nuclear transport
Temperature-sensitive Intermediate Filament Assembly. Alternative Structures of *Xenopus laevis* Vimentin *in Vitro* and *in Vivo*, **234**, 99–113.

Nuclease digestion
Energetics of a Stable Intramolecular DNA Triple Helix Formation, **230**, 1278–1290.

Nucleocapsid protein
Analysis of the Interactions of HIV1 Replication Primer $tRNA^{Lys,3}$ with Nucleocapsid Protein and Reverse Transcriptase, **231**, 185–190.

Nucleoprotein complex
Superhelical Path of the DNA in the Nucleoprotein Complex that Activates the Initiation of Phage ϕ29 DNA Replication, **230**, 248–259.

Nucleoside diphosphate kinase
Crystal Structure of *Myxococcus xanthus* Nucleoside Diphosphate Kinase and its Interaction with a Nucleotide Substrate at 2·0 Resolution, **234**, 1230–1247.

Nucleosome
Negative Supercoiling and Nucleosome Cores. I. The Effect of Negative Supercoiling on the Efficiency of Nucleosome Core Formation *in Vitro*, **229**, 623–636.
Negative Supercoiling and Nucleosome Cores. II. The Effect of Negative Supercoiling on the Positioning of Nucleosome Cores *in Vitro*, **229**, 637–655.
Structure of Nucleosomal DNA at High Salt Concentration as Probed by Hydroxyl Radical, **229**, 827–832.
Structural and Functional Requirements for the Chromatin Transition at the *PHO5* Promoter in *Saccharomyces cerevisiae* upon *PHO5* Activation, **231**, 658–667.
Effect of Positive Supercoiling on DNA Compaction by Nucleosome Cores, **234**, 297–301.

Nucleosome positioned
GEBF-I activates the *Drosophila* Sgs3 gene enhancer by altering a positioned nucleosomal core particle, **234**, 319–330.
Genomic Footprinting of the Promoter Regions of *STE2* and *STE3* genes in the Yeast *Saccharomyces cerevisiae*, **234**, 975–987.

Nucleotide conformation
Modeling the Three-dimensional Structure of RNA Using Discrete Nucleotide Conformational Sets, **229**, 1049–1064.

Nucleotide synthesis
Primary Structure and Crystallization of Orotate Phosphoribosyltransferase from *Salmonella typhimurium*, **230**, 1304–1308.

Nutrient starvation
Significant Dispersed Recurrent DNA Sequences in the *Escherichia coli* Genome. Several New Groups, **229**, 833–848.

Old yellow enzyme
Crystallization of Old Yellow Enzyme Illustrates an Effective Strategy for Increasing Protein Crystal Size, **234**, 502–507.

Oligonucleotide
Base-pair Induced Shifts in the Tautomeric Equilibrium of a Modified DNA Base, **230**, 6–10.
Endonuclease VII of Phage T4 Triggers Mismatch Correction *in Vitro*, **230**, 868–877.
Molecular Basis for Methoxyamine-initiated Mutagenesis: ^{1}H Nuclear Magnetic Resonance Studies of Oligonucleotide Duplexes Containing Base-modified Cytosine Residues, **230**, 1068–1076.
Nuclear Magnetic Resonance Comparison of the Binding Sites of Mithramycin and Chromomycin on the Self-complementary Oligonucleotide $d(ACCCGGGT)_2$. Evidence that the Saccharide Chains have a role in Sequence Specificity, **231**, 753–767.
Crystal and Molecular Structure of d(CGTAGATCTACG) at 2·25 Å Resolution, **234**, 198–208.

OmpF porin
The Orientation of Porin OmpF in the Outer Membrane of *Escherichia coli*, **233**, 400–413.

Oncomodulin
Refinement of Recombinant Oncomodulin at 1·30 Å Resolution, **230**, 1216–1224.

Operator
Specificity of the Mnt Protein. Independent Effects of Mutations at Different Positions in the Operator, **229**, 821–826.

Operator bacteriophage 434
The Bacteriophage 434 Right Operator. Roles of O_R1, O_R2 and O_R3, **230**, 28–40.

Operator binding
Missense Mutations in the *Bacillus subtilis gnt* Repressor that Diminish Operator Binding Ability, **231**, 167–174.

Operator *lac*
Origin of the Asymmetrical Contact between *lac* Repressor and *lac* Operator DNA, **233**, 389–399.
Structure of the Complex of *lac* Repressor Headpiece and an 11 Base-pair Half-operator Determined by Nuclear Magnetic Resonance Spectroscopy and Restrained Molecular Dynamics, **234**, 446–462.

operon *mer*
Tn*5053*, a Mercury Resistance Transposon with Integron's Ends, **230**, 1103–1107.

Optimization
Quadratic Minimization of Predictors for Protein Secondary Structure. Application to Transmembrane α-Helices, **232**, 165–191.
Comparative Protein Modelling by Satisfaction of Spatial Restraints, **234**, 779–815.

Organelle
Sequences of Sea Urchin Kinesin Light Chain Isoforms, **231**, 155–158.
On the Biosynthesis of Bovine Pancreatic Trypsin Inhibitor (BPTI). Structure, Processing, Folding and Disulphide Bond Formation of the Precursor *in Vitro* and in Microsomes, **232**, 1176–1196.

Orotic acid
Primary Structure and Crystallization of Orotate Phosphoribosyltransferase from *Salmonella typhimurium*, **230**, 1304–1308.

Osmoregulation
Isolation and Sequencing of *Escherichia coli* Gene *proP* Reveals Unusual Structural Features of the Osmoregulatory Proline/Betaine Transporter, ProP, **229**, 268–276.
Mutations that Affect Separate Functions of OmpR the Phosphorylated Regulator of Porin Transcription in *Escherichia coli*, **231**, 261–273.
Ligand Binding to the Receptor Domain Regulates the Ratio of Kinase to Phosphatase Activities of the Signaling Domain of the Hybrid *Escherichia coli* Transmembrane Receptor, Taz1, **232**, 484–492.

Osmotic pressure
Molecular Recognition Mediated by Bound Water. A Mechanism for Star Activity of the Restriction Endonuclease *Eco*RI, **234**, 302–306.

Oxidoreductase
Crystallization of DsbA, an *Escherichia coli* Protein Required for Disulphide Bond Formation *in Vivo*, **230**, 1097–1100.
Crystallization and Preliminary Crystallographic Investigations of the Soluble Glucose Dehydrogenase from *Acinetobacter calcoaceticus*, **233**, 784–786.

Oxygen
Physiological Relevance of the Overall ΔH of Oxygen Binding to Fetal Human Hemoglobin, **229**, 512–516.
A Mutagenic Study of the Allosteric Linkage of His(HC3)146β in Haemoglobin, **230**, 1291–1296.

Papaya mosaic virus
Crystallization and Preliminary X-ray Analysis of Papaya Mosaic Virus Coat Protein, **234**, 885–887.

Paromomycin
MSS1, a Nuclear-encoded Mitochondrial GTPase Involved in the Expression of COX1 Subunit of Cytochrome *c* Oxidase, **232**, 79–88.

Parvalbumin
Refinement of Recombinant Oncomodulin at 1·30 Å Resolution, **230**, 1216–1224.

Parvovirus
The Canine Parvovirus Empty Capsid Structure, **233**, 231–244.

P-cadherin gene
The 5′ Flanking Sequences of the Mouse P-cadherin Gene, **231**, 935–941.

Pea protoplasts
Identification of the Auxin-responsive Element, *AuxRE*, in the Primary indoleacetic Acid-inducible Gene, *PS-IAA4/5*, of Pea (*Pisum sativum*), **233**, 580–596.

Penicillin binding protein
Crystallization of a Genetically Engineered Water-soluble Primary Penicillin Target Enzyme. The High Molecular Mass PBP2x of *Streptococcus pneumoniae*, **232**, 1007–1009.

Penicillinase
Structure of a Phosphonate-inhibited β-Lactamase. An Analog of the Tetrahedral Transition State/Intermediate of β-Lactam Hydrolysis, **234**, 165–178.

Pepstatin
Crystallization of Inhibited Aspartic Proteinase from *Candida albicans*, **234**, 1266–1269.

Peptide
Conformational Filtering in Polypeptides and Proteins, **229**, 125–145.
Three-dimensional Structure of the Glutathione Synthetase from *Escherichia coli* B at 2·0 Å Resolution, **229**, 1083–1100.
Local Structure Due to an Aromatic–Amide Interaction Observed by ^{1}H-Nuclear Magnetic Resonance Spectroscopy in Peptides Related to the N Terminus of Bovine Pancreatic Trypsin Inhibitor, **230**, 312–322.
Mapping of the Zinc Binding Domain of *Escherichia coli* Methionyl-tRNA Synthetase, **231**, 1068–1077.
Methionyl-tRNA Synthetase Zinc Binding Domain. Three-dimensional Structure and Homology with Rubredoxin and *gag* Retroviral Proteins, **231**, 1078–1089.
Crystal Structure of an Anticholera Toxin Peptide Complex at 2·3 Å, **232**, 1169–1175.
Dissecting the Structure of a Partially Folded Protein. Circular dichroism and Nuclear Magnetic Resonance Studies of Peptides from Ubiquitin, **234**, 483–492.
Computing the Structure of Bound Peptides. Application to Antigen Recognition by Class I Major Histocompatibility Complex Receptors, **234**, 515–521.
Local Conformations of Peptides Representing the Entire Sequence of Bovine Pancreatic Trypsin Inhibitor and Their Roles in Folding, **234**, 861–878.

Peptide docking
Computing the Structure of Bound Peptides. Application to Antigen Recognition by Class I Major Histocompatibility Complex Receptors, **234**, 515–521.

Peptides synthetic
Mammalian Heterogeneous Ribonucleoprotein A1 and its Constituent Domains. Nucleic Acid Interaction, Structural Stability and Self-association, **229**, 873–889.

Peptidyl transferase
Erythromycin Binding is Reduced in Ribosomes with Conformational Alterations in the 23 S rRNA Peptidyl Transferase Loop, **232**, 725–731.

Periplasmic protein
Crystallization and Preliminary X-ray Analysis of the Periplasmic Fragment of CyoA–a Subunit of the *Escherichia coli* Cytochrome *o* Complex, **229**, 794–796.
Crystallization and Preliminary X-ray Analysis of the Di-Haem Cytochrome *c* Peroxidase from *Pseudomonas aeruginosa*, **232**, 1208–1210.
Genetic Analysis of Periplasmic Binding Protein Dependent Transport in *Escherichia coli*. Each Lobe of Maltose-binding Protein Interacts with a Different Subunit of the $MalFGK_2$ Membrane Transport Complex, **233**, 659–670.
The 1·7 Å Refined X-ray Structure of the Periplasmic Glucose/Galactose Receptor from *Salmonella typhimurium*, **233**, 739–752.
Preliminary X-ray Crystallographic Studies of Ribonuclease I from *Escherichia coli*, **234**, 499–501.

Permease
Structure of the Maltodextrin-uptake Locus of *Streptococcus pneumoniae*. Correlation to the *Escherichia coli* Maltose Regulon, **230**, 800–811.

pH
Determination of Individual Rate Constants k_1 and k_2 in Hen Egg-white Lysozyme. The Opening and Closing reactions in the Linderstrøm-Lang Model for Amide/Solution Hydrogen Exchange in Proteins, **230**, 651–660.
On the pH Dependence of Protein Stability, **231**, 459–474.
Two-dimensional Nuclear Magnetic Resonance Analysis of a Labeled Peptide Bound to a Class II Major Histocompatibility Complex Molecule, **232**, 342–350.

Phage display
Affinity Maturation of Human Growth Hormone by Monovalent Phage Display, **234**, 564–578.

Phenylalanine dehydrogenase
Evolution of Substrate Diversity in the Superfamily of Amino Acid Dehydrogenases. Prospects for Rational Chiral Synthesis, **234**, 938–945.

Phosphatase
Requirement of Both Kinase and Phosphatase Activities of an *Escherichia coli* Receptor (Taz1) for Ligand-dependent Signal Transduction, **231**, 335–342.
Ligand Binding to the Receptor Domain Regulates the Ratio of Kinase to Phosphatase Activities of the

Signaling Domain of the Hybrid *Escherichia coli* Transmembrane Receptor, Taz1, **232**, 484–492.
Ligand Binding Induces an Asymmetrical Transmembrane Signal through a Receptor Dimer, **232**, 493–498.

Glucose-6-phosphate
Crystallographic Binding Studies on the Allosteric Inhibitor Glucose-6-Phosphate to T State Glycogen Phosphorylase b, **232**, 253–267.

Phosphoenolpyruvate synthase
In Vitro Binding of the Pleiotropic Transcriptional Regulatory Protein, FruR, to the *fru*, *pps*, *ace*, *pts* and *icd* Operons of *Escherichia coli* and *Salmonella typhimurium*, **234**, 28–44.

Phospholipase A2
Crystallization and Preliminary X-ray Analysis of Vipoxin, a Complex between a Toxic Phospholipase A2 and its Natural Polypeptide Inhibitor, **231**, 498–500.
Crystal Structure of a Porcine Pancreatic Phospholipase A2 Mutant. A Large Conformational Change Caused by the F63V Point Mutation, **232**, 839–855.

Phospholipase C
The Crystal Structure of Tris-inhibited Phospholipase C from *Bacillus cereus* at 1·9 Å Resolution. The Nature of the Metal Ion in Site 2, **231**, 870–876.
Crystal Structure of Phospholipase C from *Bacillus cereus* Complexed with a Substrate Analog, **234**, 179–187.

Phospholipase inhibitor
Crystallization and Preliminary X-ray Analysis of Vipoxin, a Complex between a Toxic Phospholipase A2 and its Natural Polypeptide Inhibitor, **231**, 498–500.

Phospholipid
Crystallization and Preliminary X-ray Crystallographic Analysis of Probable Amylase/Protease Inhibitor-B from Rice Seeds, **229**, 255–257.
X-rays Destroy the Lamellar Structure of Model Membranes, **229**, 291–294.

Phosphonate
Structure of a Phosphonate-inhibited β-Lactamase. An Analog of the Tetrahedral Transition State/Intermediate of β-Lactam Hydrolysis, **234**, 165–178.

Phosphorylation
Reconstitution of Short-spaced Chromatin from the Histone Octamer and either HMG-14,17 or Histone H1, **230**, 824–836.
Glutamate at the Site of Phosphorylation of Nitrogen-regulatory Protein NTRC Mimics Aspartyl-Phosphate and Activates the Protein, **232**, 67–78.
Crystallization and Preliminary X-ray Studies of Extracellular Signal-regulated Kinase-2/MAP Kinase with an Incorporated His-tag, **233**, 550–552.
The Structures of Native Phosphorylated Chicken Cystatin and of a Recombinant Unphosphorylated Variant in Solution, **234**, 1048–1059.

Phosphotransferase
Primary Structure and Crystallization of Orotate Phosphoribosyltransferase from *Salmonella typhimurium*, **230**, 1304–1308.
Analysis of Mutations Occurring at the Human *hprt* Locus, **231**, 41–57.
In Vitro Binding of the Pleiotropic Transcriptional Regulatory Protein, FruR, to the *fru*, *pps*, *ace*, *pts* and *icd* Operons of *Escherichia coli* and *Salmonella typhimurium*, **234**, 28–44.
Crystal Structure of *Myxococcus xanthus* Nucleoside Diphosphate Kinase and its Interaction with a Nucleotide Substrate at 2·0 Resolution, **234**, 1230–1247.

Photolyase
Crystallization and Preliminary X-ray Diffraction Studies of Photolyase (Photoreactivating Enzyme) from the Cyanobacterium *Anacystis nidulans*, **233**, 167–169.

Photosynthesis
Hydropathy and Molar Volume Constraints on Combinatorial Mutants of the Photosynthetic Reaction Center, **232**, 242–252.

Photosynthetic reaction centre
New Crystal Form of the Photosynthetic Reaction Centre from *Rhodobacter sphaeroides* of Improved Diffraction Quality, **230**, 1311–1314.
Hydropathy and Molar Volume Constraints on Combinatorial Mutants of the Photosynthetic Reaction Center, **232**, 242–252.

Phylogenetic relationships
Evolution of Allosteric Control in Glycogen Phosphorylase, **234**, 700–721.

Phytophthora cryptogea
Crystallization and Preliminary X-ray Diffraction Studies of β-Cryptogein, a Toxic Elicitin Secreted by the Phytopathogenic Fungus *Phytophthora cryptogea*, **229**, 564–565.

Picornavirus
Preliminary Crystallographic Analysis of Coxsackievirus A9, **230**, 667–669.
Preliminary Crystallographic Analysis of Bovine Enterovirus, **231**, 930–932.

Plant
Characterization of a Multigene Family Encoding an Exopolygalacturonase in Maize, **229**, 797–801.
Crystallization and Preliminary Crystallographic Analysis of a Tetrameric Isolectin from *Vicia villosa*, Specific for the Tn Antigen, **230**, 670–672.
Identification of the Auxin-responsive Element, *AuxRE*, in the Primary indoleacetic Acid-inducible Gene, *PS-IAA4/5*, of Pea (*Pisum sativum*), **233**, 580–596.
Structural Characterization of the Early Indoleacetic Acid-inducible Genes, *PS-IAA4/5* and *PS-IAA6*, of Pea (*Pisum sativum* L.), **233**, 789–798.

Plasmid
A Quantitative Model of ColE1 Plasmid Copy Number Control, **229**, 860–872.
A Superfamily of ATPases with Diverse Functions Containing Either Classical or Deviant ATP-binding Motif, **229**, 1165–1174.
Analysis of Establishment Phase Replication of the Plasmid ColE1, **230**, 137–150.
Conformation of the Origin of P1 Plasmid Replication. Initiator Protein Induced Wrapping and Intrinsic Unstacking, **231**, 19–28.
Activation of DNA Binding by the Monomeric Form of the P1 Replication Initiator RepA by Heat Shock Proteins DnaJ and DnaK, **232**, 23–34.
Plasmid Addiction Genes of Bacteriophage P1: *doc*, which Causes Cell Death on Curing of Prophage, and *phd*, which Prevents Host Death when Prophage is Retained, **233**, 414–428.
The F Plamid CcdB Protein Induces Efficient ATP-dependent DNA Cleavage by Gyrase, **234**, 534–541.

Plasmid broad host-range
Precise Deletions in Large Bacterial Genomes by Vector-mediated Excision (VEX). The *trfA* Gene of Promiscuous Plasmid RK2 is Essential for Replication in Several Gram-negative Hosts, **230**, 174–185.

Plasmid ColE1
A Quantitative Model of ColE1 Plasmid Copy Number Control, **229**, 860–872.

Plasmid copy number control
Analysis of Establishment Phase Replication of the Plasmid ColE1, **230**, 137–150.

Platelet
The Nuclear Magnetic Resonance Solution Structure of Flavoridin, an Antagonist of the Platelet GP IIb-IIIa Receptor, **232**, 907–925.
Crystallization and X-ray Diffraction Study of Recombinant Platelet-derived Endothelial Cell Growth Factor, **234**, 879–880.

P-loop motif
Mutagenesis of the P-loop Motif in the ATP Binding Site of the RecA Protein from *Escherichia coli*, **232**, 1048–1059.

Pneumocystis carinii
Preliminary Crystallographic Data for *Pneumocystis carinii* Dihydrofolate Reductase, **230**, 679–680.

Podospora anserina
Self-splicing of a *Podospora anserina* Group IIA Intron *in vitro*. Effects of 3′-Terminal Intron Alterations on Cleavage at the 5′ and 3′ Splice Site, **231**, 559–568.

Pokeweed antiviral protein
The 2·5 Å Structure of Pokeweed Antiviral Protein, **233**, 705–715.

Polyadenylation
Studies of the Hyperthermophile *Thermotoga maritima* by Random Sequencing of cDNA and Genomic Libraries. Identification and Sequencing of the *trpEG (D)* Operon, **231**, 960–981.

Polygalacturonase
Characterization of a Multigene Family Encoding an Exopolygalacturonase in Maize, **229**, 797–801.

Polymer flexibility
A Conformational Change in the Actin Subunit Can Change the Flexibility of the Actin Filament, **232**, 334–341.

Polymerase chain reaction
The 5′ Flanking Sequences of the Mouse P-cadherin Gene, **231**, 935–941.
Characterization of a Set of Integration Host Factor Mutants Deficient for DNA Binding, **234**, 45–59.

Polymerization
The Sequence of Cleavage of Fibrinopeptides from Fibrinogen is Important for Protofibril Formation and Enhancement of Lateral Aggregation in Fibrin Clots, **232**, 285–297.

Porin
Crystallization and Preliminary X-ray Diffraction Analysis of ScrY, a Specific Bacterial Outer Membrane Porin, **229**, 258–262.
Porin Conformation in the Absence of Calcium. Refined Structure at 2·5 Å Resolution, **231**, 817–824.

Prenyltransferase
Crystallization and Preliminary X-ray Diffraction Studies of *Bacillus stearothermophilus* Farnesyl Diphosphate Synthase Expressed in *Escherichia Coli*, **233**, 787–788.

Pressure dissociation
Reversible Pressure Dissociation of R17 Bacteriophage. The Physical Individuality of Virus Particles, **231**, 999–1008.

Pribnow box
Molecular Dynamics with Weighted Time-averaged Restraints for a DNA Octamer. Dynamic Interpretation of Nuclear Magnetic Resonance Data, **234**, 373–389.

Primer extension
Negative Supercoiling and Nucleosome Cores. II. The Effect of Negative Supercoiling on the Positioning of Nucleosome Cores *in Vitro*, **229**, 637–655.
Analysis of the Biased Distribution of Topoisomerase I Break Sites on Replicating Simian Virus 40 DNA, **231**, 6–18.
Dynamics of *In Vitro* Assembly of 16 S rRNA into 30 S Ribosomal Subunits, **232**, 362–374.

Pro-barley lectin
Crystallization and Preliminary X-ray Diffraction Studies of Recombinant Barley Lectin and Pro-barley Lectin, **233**, 322–324.

Proglycinin
Crystallization and Preliminary X-ray Crystallographic Analysis of the Soybean Proglycinin Expressed in *Escherichia coli*, **233**, 177–178.

Prolactin
Multiple Transitions to Non-B-DNA Structures Occur in the Distal Regulatory Region of the Rat Prolactin Gene, **229**, 344–367.

Proline
Stability and Folding Kinetics of Ribonuclease T_1 are Strongly Altered by the Replacement of *Cis*-proline 39 with Alanine, **231**, 897–912.
Kinetic Models for Unfolding and Refolding of Ribonuclease T_1 with Substitution of *Cis*-proline 39 by Alanine, **231**, 913–926.
A *Saccharomyces cerevisiae* Cyclophilin Resident in the Endoplasmic Reticulum, **233**, 183–188.
The Refined Structure of Bacteriophage MS2 at 2·8 Å Resolution, **234**, 620–639.

Proline-helices
Refined X-ray Structures of Haloalkane Dehalogenase at pH 6·2 and pH 8·2 and Implications for the Reaction Mechanism, **232**, 856–872.

Prolyl-isomerization
Stability and Folding Kinetics of Ribonuclease T_1 are Strongly Altered by the Replacement of *Cis*-proline 39 with Alanine, **231**, 897–912.
Kinetic Models for Unfolding and Refolding of Ribonuclease T_1 with Substitution of *Cis*-proline 39 by Alanine, **231**, 913–926.

Promoter
Effects of a Single Base-pair Deletion in the Bacteriophage λ P_{RM} Promoter. Repression of P_{RM} by Repressor Bound at O_R2 and by RNA Polymerase Bound at P_R, **229**, 37–51.
Gene Organization, Primary Structure and RNA Processing Analysis of a Ribosomal RNA Operon in *Lactococcus lactis*, **230**, 57–76.
AraC Protein Can Activate Transcription from Only One Position and When Pointed in Only One Direction, **231**, 205–218.
Transcriptional Slippage During the Transcription Initiation Process at a Mutant *lac* Promoter *in Vivo*, **231**, 569–580.
Bacteriophage T7 RNA Polymerase. ^{19}F-Nuclear Magnetic Resonance Observations at 5-Fluorouracil-substituted Promoter DNA and RNA Transcript, **232**, 105–122.
Nutrient-responsive Promoter Elements of the V4 Gene of *Dictyostelium discoideum*, **232**, 386–396.
The Minus 35-Recognition Region of *Escherichia coli* Sigma 70 is Inessential for Initiation of Transcription at an "Extended Minus 10" Promoter, **232**, 406–418.
A New Start Site for *Escherichia coli* RNA Polymerase at an Engineered Short Region of Non-complementarity in Double-stranded DNA, **233**, 349–358.
Identification of the Auxin-responsive Element, *AuxRE*, in the Primary indoleacetic Acid-inducible Gene, *PS-IAA4/5*, of Pea (*Pisum sativum*), **233**, 580–596.

Promoter divergent
Effects of a Single Base-pair Deletion in the Bacteriophage λ P_{RM} Promoter. Repression of P_{RM} by Repressor Bound at O_R2 and by RNA Polymerase Bound at P_R, **229**, 37–51.

Promoter housekeeping
Duck Lactate Dehydrogenase B/ε-Crystallin Gene. Lens Recruitment of a GC-promoter, **229**, 849–859.

Promoter internal
Functional Dissection of Two Promoters that Control Sense and Antisense Transcription of *Drosophila melanogaster* F Elements, **234**, 988–997.

Promoter minus 35-less
The Minus 35-Recognition Region of *Escherichia coli* Sigma 70 is Inessential for Initiation of Transcription at an "Extended Minus 10" Promoter, **232**, 406–418.

Promoter *Pm*
Identification of a *cis*-acting Sequence within the *Pm* Promoter of the TOL Plasmid which Confers XylS-mediated Responsiveness to Substituted Benzoates, **230**, 699–703.

Promoters *nif*
Nucleotide Sequence and Characterization of *Rhizobium meliloti* Nodulation Competitiveness Genes *nfe*, **229**, 570–576.

Protease
Common Ring Motifs in Proteins Involving Asparagine or Glutamine Amide Groups Hydrogen-bonded to Main-chain Atoms, **231**, 888–896.
Structural Features of the 26 S Proteasome Complex, **234**, 932–937.

Protease alkaline
Crystallization and Preliminary X-ray Studies of a Protease from *Pseudomonas aeruginosa*, **230**, 1315–1316.

Protease inhibitor
Requirement for a Disulfide Bridge Near the Reactive Site of Protease Inhibitor SSI (*Streptomyces* Subtilisin Inhibitor) for its Inhibitory Action, **230**, 395–399.
Crystallization and Preliminary Crystallographic Analysis of Antistasin, a Leech-derived Inhibitor of Blood Coagulation Factor Xa, **231**, 1137–1138.
Affinity and Specificity of Serine Endopeptidase–Protein Inhibitor Interactions. Empirical Free Energy Calculations Based on X-ray Crystallographic Structures, **234**, 661–679.
Crystallographic Refinement of Bowman-Birk Type Protease Inhibitor A-II from Peanut (*Arachis hypogaea*) at 2·3 Å Resolution, **234**, 722–734.

Protease Lon
An Imbalance of HU Synthesis Induces Mucoidy in *Escherichia coli*, **234**, 1021–1037.

Proteasome
Evidence Indicating that the Human Proteasome is a Complex Dimer, **229**, 14–19.
Preliminary X-ray Crystallographic Study of the Proteasome from *Thermoplasma acidophilum*, **234**, 881–884.
Structural Features of the 26 S Proteasome Complex, **234**, 932–937.

Protein
Structural Studies of the Enveloped dsRNA Bacteriophage $\phi 6$ of *Pseudomonas syringae* by Raman Spectroscopy. I. The Virion and Its Membrane Envelope, **230**, 461–472.
Backbone-dependent Rotamer Library for Proteins. Application to Side-chain Prediction, **230**, 543–574.
Determination of Individual Rate Constants k_1 and k_2 in Hen Egg-white Lysozyme. The Opening and Closing reactions in the Linderstrøm-Lang Model for Amide/Solution Hydrogen Exchange in Proteins, **230**, 651–660.
Studies of the Hyperthermophile *Thermotoga maritima* by Random Sequencing of cDNA and Genomic Libraries. Identification and Sequencing of the *trpEG (D)* Operon, **231**, 960–981.
Contribution of Hydration to Protein Folding Thermodynamics. I. The Enthalpy of Hyderation, **232**, 639–659.
Contribution of Hydration to Protein Folding Thermodynamics, **232**, 660–679.

Protein α-helix
The (i, $i+4$) Phe–His Interaction Studied in an Alanine-based α-Helix, **230**, 284–291.
Quadratic Minimization of Predictors for Protein Secondary Structure. Application to Transmembrane α-Helices, **232**, 165–191.
Packing of Secondary Structural Elements in Proteins. Analysis and Prediction of Inter-helix Distrances, **233**, 464–479.

Protein α-helix/β-sheet packing
Sweet-tasting Protein Monellin is Related to the Cystatin Family of Thiol Proteinase Inhibitors, **230**, 689–694.

Protein accessible surface
What is the Natural Boundary of a Protein in Solution?, **230**, 641–650.
Surface Area Included in Energy Refinement of Proteins. A Comparative Study on Atomic Solvation Parameters, **233**, 275–292.

Protein activity
Step-wise Mutation of Barnase to Binase. A Procedure for Engineering Increased Stability of Proteins and an Experimental Analysis of the Evolution of Protein Stability, **233**, 305–312.

Protein aggregation
Secondary Structure and Temperature-induced Unfolding and Refolding of Ribonuclease T_1 in Aqueous Solution. A Fourier Transform Infrared Spectroscopic Study, **232**, 967–981.
Crystallization of Single-Chain Fv Proteins, **234**, 897–901.

Protein alignment
Alignment and Searching for Common Protein Folds Using a Data Bank of Structural Templates, **231**, 735–752.

Protein annealing
Refined Solution Structures of the *Escherichia coli trp* Holo-and Aporepressor, **229**, 735–746.
Mammalian Heterogeneous Ribonucleoprotein A1 and its Constituent Domains. Nucleic Acid Interaction, Structural Stability and Self-association, **229**, 873–889.
Three-dimensional Structure of the Lipoyl Domain from *Bacillus stearothermophilus* Pyruvate Dehydrogenase Multienzyme Complex, **229**, 1037–1048.
The High-resolution Structure of the Peripheral Subunit-binding Domain of Dihydrolipoamide Acetyltransferase from the Pyruvate Dehydrogenase Multienzyme Complex of *Bacillus stearothermophilus*, **230**, 323–341.
α-Actinin Increases Actin Filament End Concentration by Inhibiting Annealing, **230**, 1151–1158.

Protein apolar side-chains
Distribution of Solvent Molecules Around Apolar Side-chains in Protein Crystals, **231**, 392–414.

Protein architecture
Sweet-tasting Protein Monellin is Related to the Cystatin Family of Thiol Proteinase Inhibitors, **230**, 689–694.

Protein assembly
Assembly of Multimeric Proteins. Effect of Mutations in the α-Subunit on Membrane Assembly and Activity of Pyridine Nucleotide Transhydrogenase, **234**, 8–13.

Protein association
Anion Binding Sites in Protein Structures, **234**, 463–482.

Protein atomic solvation parameters
Surface Area Included in Energy Refinement of Proteins. A Comparative Study on Atomic Solvation Parameters, **233**, 275–292.

α-β-protein
Refined Crystal Structure of Human Transforming Growth Factor β2 at 1·95 Å Resolution, **231**, 445–458.

Protein β-hairpins
A Model of the Three-dimensional Structure of Ice Nucleation Proteins, **232**, 709–717.

Protein β sandwich
Refined Structure of the Pyruvoyl-dependent Histidine Decarboxylase from *Lactobacillus* 30a, **230**, 516–528.

Protein β-sheet
Common Ring Motifs in Proteins Involving Asparagine or Glutamine Amide Groups Hydrogen-bonded to Main-chain Atoms, **231**, 888–896.

Protein backbone conformation
Rotamers: To be or not to be? An Analysis of Amino Acid Side-chain Conformations in Globular Proteins, **230**, 592–612.

Protein basic domain
The X-ray Structure of the GCN4-bZIP Bound to ATF/CREB Site DNA Shows the Complex Depends on DNA Flexibility, **233**, 139–154.

Protein binding domain
Identification of the Contact Surface of a Streptococcal Protein G Domain Complexed with a Human Fc Fragment, **233**, 331–335.

Protein bond angles
Main-chain Bond Lengths and Bond Angles in Protein Structures, **231**, 1049–1067.

Protein chain conformational
Estimation and Use of Protein Backbone Angle Probabilities, **229**, 448–460.

Protein chain-folding
Lattice Neural Network Minimization. Application of Neural Network Optimization for Locating the Global-minimum Conformations of Proteins, **232**, 1157–1168.

Protein chemical modification
Phenyl Azide-mediated Photocrosslinking Analysis of Cro–DNA Interaction, **230**, 453–460.

Protein common subgraph
Identification of Tertiary Structure Resemblance in Proteins Using a Maximal Common Subgraph Isomorphism Algorithm, **229**, 707–721.

Protein complementation
Isolation and Sequencing of *Escherichia coli* Gene *proP* Reveals Unusual Structural Features of the Osmoregulatory Proline/Betaine Transporter, ProP, **229**, 268–276.

Protein component analysis
Effect of Solvent on Collective Motions in Globular Protein, **234**, 1207–1217.

Protein conformation
Left-handed Polyproline II Helices Commonly Occur in Globular Proteins, **229**, 472–493.
Solution Structure of Human Plasma Fibronectin under Different Solvent Conditions. Fluorescence Energy Transfer, Circular Dichroism and Light-scattering Studies, **230**, 625–640.
Dissecting the Disulphide-coupled Folding Pathway of Bovine Pancreatic Trypsin Inhibitor. Forming the First Disulphide Bonds in Analogues of the Reduced Protein, **232**, 873–896.

Protein cross-linking
tRNA-Guanine Transglycosylase from *Escherichia coli*. Overexpression, Purification and Quaternary Structure, **231**, 489–497.

Protein cysteine-rich
Crystal Structure of Hydrophobic Protein from Soybean; a Member of a New Cysteine-rich Family, **231**, 877–887.
Mapping of the Zinc Binding Domain of *Escherichia coli* Methionyl-tRNA Synthetase, **231**, 1068–1077.

Protein database
Comparative Protein Modelling by Satisfaction of Spatial Restraints, **234**, 779–815.

Protein degradation
Preliminary X-ray Crystallographic Study of the Proteasome from *Thermoplasma acidophilum*, **234**, 881–884.

Protein denaturation
Further Examination of the Intermediate State in the Denaturation of the Tryptophan Synthase α Subunit. Evidence that the Equilibrium Denaturation Intermediate is a Molten Globule, **234**, 1197–1206.

Protein denatured
Configurational Distribution of Denatured Phosphoglycerate Kinase, **231**, 840–848.
The Phase Transition between a Compact Denatured State and a Random Coil State in Staphylococcal Nuclease is First-Order, **232**, 718–724.

Protein design
Spacing Requirements Between LexA Operator Half-sites can be Relaxed by Fusing the LexA DNA Binding Domain with some Alternative Dimerization Domains, **229**, 1–7.
Similar Hydrophobic Replacements of Leu99 and Phe153 within the Core of T4 Lysozyme Have Different Structural and Thermodynamic Consequences, **229**, 747–769.

Protein dimerization
Functional Sites in the 5′ Region of Human Immunodeficiency Virus Type 1 RNA Form Defined Structural Domains, **229**, 382–397.
Refined Crystal Structure of Human Transforming Growth Factor β2 at 1·95 Å Resolution, **231**, 445–458.
Characterization of a Set of Integration Host Factor Mutants Deficient for DNA Binding, **234**, 45–59.
Evolution of Allosteric Control in Glycogen Phosphorylase, **234**, 700–721.

Protein distance geometry
Nuclear Magnetic Resonance Solution Structure of the Pheromone Er-10 from the Ciliated Protozoan *Euplotes raikovi*, **231**, 800–816.
Protein Structure Comparison by Alignment of Distance Matrices, **233**, 123–138.

Protein disulphide isomerase
Crystallization of DsbA, an *Escherichia coli* Protein Required for Disulphide Bond Formation *in Vivo*, **230**, 1097–1100.
On the Biosynthesis of Bovine Pancreatic Trypsin Inhibitor (BPTI). Structure, Processing, Folding and Disulphide Bond Formation of the Precursor *in Vitro* and in Microsomes, **232**, 1176–1196.
The Redox Properties of Protein Disulfide Isomerase (DsbA) of *Escherichia coli* Result from a Tense Conformation of its Oxidized Form, **233**, 559–566.

Protein domain
Domain Organization of the Subunit of the *Salmonella typhimurium* Flagellar Hook, **229**, 79–84.
Crystallization of the C-terminal Domain of Rabbit Serum Hemopexin, **229**, 251–252.
The High-resolution Structure of the Peripheral Subunit-binding Domain of Dihydrolipoamide Acetyltransferase from the Pyruvate Dehydrogenase Multienzyme Complex of *Bacillus stearothermophilus*, **230**, 323–341.
Self-splicing of a *Podospora anserina* Group IIA Intron *in vitro*. Effects of 3′-Terminal Intron Alterations on Cleavage at the 5′ and 3′ Splice Site, **231**, 559–568.
Production and Characterization of an Antibody Fv Fragment ^{15}N-Labeled in the V_L Domain Only, **232**, 15–22.
Dissection of the DNA-binding Domain of *Xenopus laevis* TFIIIA. Quantitative DNase I Footprinting Analysis of Specific Complexes between a 5 S RNA Gene Fragment and N-terminal Fragments of TFIIIA Containing Three, Four or Five Zinc-finger Domains, **233**, 191–202.
Conformational Flexibility in Glutamate Dehydrogenase. Role of Water in Substrate Recognition and Catalysis, **234**, 1131–1139.

Protein dynamics
Analysis of the Backbone Dynamics of Interleukin-8 by ^{15}N Relaxation Measurements, **230**, 364–372.
Comparison of the Dynamics of an Engineered Insulin Monomer and Dimer by Acid-Quenched Amide Proton Exchange. Non-local Stabilization of Interchain Hydrogen Bonds by Dimerization, **230**, 387–394.
How Consistent are Molecular Dynamics Simulations? Comparing Structure and Dynamics in Reduced and Oxidized *Escherichia coli* Thioredoxin, **233**, 766–780.

Low Energy of Activation for Amide Hydrogen Exchange Reactions in Proteins Supports a Local Unfolding Model, **234**, 234–241.
Domain Closure in Lactoferrin. Two Hinges Produce a See-saw Motion Between Alternative Close-packed Interfaces, **234**, 357–372.

Protein energy minimization
A Method to Configure Protein Side-chains from the Main-chain Trace in Homology Modelling, **231**, 849–860.
Surface Area Included in Energy Refinement of Proteins. A Comparative Study on Atomic Solvation Parameters, **233**, 275–292.

Protein engineering
Relocating a Negative Charge in the Binding Pocket of Trypsin, **230**, 934–949.
Site-directed Mutagenesis of the Yeast Mitochondrial ADP/ATP Translocator. Six Arginines and One Lysine are Essential, **230**, 1159–1170.
Phenotypic Suppression by Incorporation of an Alien Amino Acid, **231**, 161–166.
Structural Differences between Wild-type NADP-dependent Glutathione Reductase from *Escherichia coli* and a Redesigned NAD-dependent Mutant, **231**, 191–195.
Hydropathy and Molar Volume Constraints on Combinatorial Mutants of the Photosynthetic Reaction Center, **232**, 242–252.
Long-Range Surface Charge–Charge Interactions in Proteins. Comparison of Experimental Results with Calculations from a Thoretical Method, **232**, 574–583.
Hamiltonians for Protein Tertiary Structure Prediction Based on Three-dimensional Environment Principles, **233**, 480–487.
Two Crystal Structures of a Potently Sweet Protein. Natural Monellin at 2·75 Å Resolution and Single-Chain Monellin at 1·7 Å Resolution, **234**, 390–404.
Crystal Structural Analysis of Mutations in the Hydrophobic Cores of Barnase, **234**, 847–860.
Role of an Active Site Residue Analyzed by Combination of Mutagenesis and Coenzyme Analog, **234**, 1218–1229.

Protein evolution
Step-wise Mutation of Barnase to Binase. A Procedure for Engineering Increased Stability of Proteins and an Experimental Analysis of the Evolution of Protein Stability, **233**, 305–312.
Structural Characterization of the Early Indoleacetic Acid-inducible Genes, *PS-IAA4/5* and *PS-IAA6*, of Pea (*Pisum sativum* L.), **233**, 789–798.

Protein expression
Cloning and Characterization of a Novel *Bacillus thuringiensis* Cytolytic Delta-Endotoxin, **229**, 319–327.

Protein family
Accommodating Sequence Changes in β-Hairpins in Proteins, **229**, 428–447.
Molecular Cloning and Expression of the Transformation Sensitive Epithelial Marker Stratifin. A Member of a Protein Family that has been Involved in the Protein Kinase C Signalling Pathway, **231**, 982–998.

Protein folding
Estimation and Use of Protein Backbone Angle Probabilities, **229**, 448–460.
Protein Folding in the Absence of the Solvent Ordering Contribution to the Hydrophobic Interaction, **229**, 502–511.
Two-dimensional Crystals of the Molecular Chaperone GroEL Reveal Structural Plasticity, **229**, 579–584.
Molten Globule of Cytochrome *c* Studied by Small Angle X-ray Scattering, **229**, 591–596.
Partially Folded Conformation of the (30-51) Intermediate in the Disulphide Folding Pathway of Bovine Pancreatic Trypsin Inhibitor. ^{1}H and ^{15}N Resonance Assignments and Determination of Backbone Dynamics from ^{15}N Relaxation Measurements, **229**, 1125–1146.
Functional Expression of the Uncomplexed Serum Retinol-binding Protein in *Escherichia coli*. Ligand Binding and Reversible Unfolding Characteristics, **230**, 725–732.
Crystallization of DsbA, an *Escherichia coli* Protein Required for Disulphide Bond Formation *in Vivo*, **230**, 1097–1100.
Genetic Algorithms for Protein Folding Simulations, **231**, 75–81.
Guanidine Hydrochloride-induced Folding of Proteins, **231**, 180–184.
Ionic Interactions in the Coiled-coil Domain of Laminin Determine the Specificity of Chain Assembly, **231**, 311–323.
On the pH Dependence of Protein Stability, **231**, 459–474.
Alignment and Searching for Common Protein Folds Using a Data Bank of Structural Templates, **231**, 735–752.
Structure and Molecular Model Refinement of Pig Pancreatic α-Amylase at 2·1 Å Resolution, **231**, 785–799.
Empirical Scale of Side-chain Conformational Entropy in Protein Folding, **231**, 825–839.
Protein Structures from Distance Inequalities, **231**, 861–869.
Stability and Folding Kinetics of Ribonuclease T_1 are Strongly Altered by the Replacement of *Cis*-proline 39 with Alanine, **231**, 897–912.
Kinetic Models for Unfolding and Refolding of Ribonuclease T_1 with Substitution of *Cis*-proline 39 by Alanine, **231**, 913–926.
Are the Molten Globule and the Unfolded States of Apo-α-Lactalbumin Enthalpically Equivalent?, **232**, 5–8.
Contribution of Hydration to Protein Folding Thermodynamics, **232**, 660–679.
Thermodynamic and Structural Analysis of the Folding/Unfolding Transitions of the *Escherichia coli* Molecular Chaperone DnaK, **232**, 680–692.
The Phase Transition between a Compact Denatured State and a Random Coil State in Staphylococcal Nuclease is First-Order, **232**, 718–724.
Crystal Structure of a Porcine Pancreatic Phospholipase A_2 Mutant. A Large Conformational Change Caused by the F63V Point Mutation, **232**, 839–855.
Dissecting the Disulphide-coupled Folding Pathway of Bovine Pancreatic Trypsin Inhibitor. Forming the First Disulphide Bonds in Analogues of the Reduced Protein, **232**, 873–896.
Secondary Structure and Temperature-induced Unfolding and Refolding of Ribonuclease T_1 in Aqueous Solution. A Fourier Transform Infrared Spectroscopic Study, **232**, 967–981.
Structure of the Recombinant N-Terminal Lobe of Human Lactoferrin at 2·0 Å Resolution, **232**, 1084–1100.
Lattice Neural Network Minimization. Application of Neural Network Optimization for Locating the Global-minimum Conformations of Proteins, **232**, 1157–1168.
Refolding of Barnase in the Presence of GroE, **232**, 1197–1207.
Protein Structure Comparison by Alignment of Distance Matrices, **233**, 123–138.
Folding of Subtilisin BPN′: Role of the Pro-sequence, **233**, 293–304.
Hamiltonians for Protein Tertiary Structure Prediction Based on Three-dimensional Environment Principles, **233**, 480–487.
The Redox Properties of Protein Disulfide Isomerase (DsbA) of *Escherichia coli* Result from a Tense Conformation of its Oxidized Form, **233**, 559–566.

Local Conformations of Peptides Representing the Entire Sequence of Bovine Pancreatic Trypsin Inhibitor and Their Roles in Folding, **234**, 861–878.
Contribution of Buried Hydrogen Bonds to Protein Stability. The Crystal Structures of Two Barnase Mutants, **234**, 1158–1170.

Protein force fields
Modeling Side-chain Conformation for Homologous Proteins Using an Energy-based Rotamer Search, **229**, 996–1006.

Protein fragments
Two Inactive Fragments Derived from the Yeast Mitochondrial Ribosomal Protein MrpS28 Function *in Trans* to Support Ribosome Assembly and Respiratory Growth, **233**, 597–605.

Protein frameshift
On the Role of the P-site in Leftward Ribosome Protein, frameshift at a Hungry Codon, **230**, 1–5.
Deficiency of 1-Methylguanosine in tRNA from *Salmonella typhimurium* Induces Frameshifting by Quadruplet Translocation, **232**, 756–765.
A Programmed Translational Frameshift is Required for the Synthesis of a Bacteriophage λ Tail Assembly Protein, **234**, 124–139.
Detecting Frame Shifts by Amino Acid Sequence Comparison, **234**, 1140–1157.

Protein free energy
Empirical Scale of Side-chain Conformational Entropy in Protein Folding, **231**, 825–839.

Protein Global optimization
Lattice Neural Network Minimization. Application of Neural Network Optimization for Locating the Global-minimum Conformations of Proteins, **232**, 1157–1168.

Protein glycine rich loop
Three-dimensional Structure of the Glutathione Synthetase from *Escherichia coli* B at 2·0 Å Resolution, **229**, 1083–1100.

Protein heat capacity
Protein Folding in the Absence of the Solvent Ordering Contribution to the Hydrophobic Interaction, **229**, 502–511.

Protein helices
Crystallization of the Motile Major Sperm Protein (MSP) of the Nematode *Ascaris suum*, **232**, 298–300.

Protein helix packing
Packing of Secondary Structural Elements in Proteins. Analysis and Prediction of Inter-helix Distrances, **233**, 464–479.

Protein helix phasing
Interactions of NodD at the *nod* Box: NodD Binds to Two Distinct Sites on the Same Face of the Helix and Induces a Bend in the DNA, **233**, 336–348.

Protein helix rotation
The Crystal Structure of the Trigonal Decamer C-G-A-T-C-G-^{6mc}A-T-C-G: a *B*-DNA Helix with 10·6 Base-pairs Per Turn, **231**, 768–784.

Protein helix shear motion
Domain Closure in Adenylate Kinase. Joints on Either Side of Two Helices Close Like Neighboring Fingers, **229**, 494–501.
Domain Closure in Lactoferrin. Two Hinges Produce a See-saw Motion Between Alternative Close-packed Interfaces, **234**, 357–372.

Protein helix-bundle
Phenyl Azide-mediated Photocrosslinking Analysis of Cro–DNA Interaction, **230**, 453–460.
Crystal Structure of Hydrophobic Protein from Soybean; a Member of a New Cysteine-rich Family, **231**, 877–887.
The Phage 434 O_R2/R1-69 Complex at 2·5 Å Resolution, **232**, 826–838.

Protein helix-loop-helix motif
Crystallographic Characterization of a PH04–DNA Complex, **229**, 566–569.

Protein heptad repeats
Ionic Interactions in the Coiled-coil Domain of Laminin Determine the Specificity of Chain Assembly, **231**, 311–323.

Protein heterodimers
Separation and Characterization of Homo and Hetero-oligomers of the Intermediate Filament Proteins Desmin and Vimentin, **230**, 837–856.
Energetics of Heterodimer Formation among Gramicidin Analogues with an NH_2-terminal Addition or Deletion. Consequences of Missing a Residue at the Join in the Channel, **231**, 1102–1121.
Yeast a1 and α2 Homeodomain Proteins Form a DNA-binding Activity with Properties Distinct from those of either Protein, **233**, 359–371.

Protein heterologous expression
Derivatives of the Yeast Mitochondrial Ribosomal Protein MrpS28 Replace Ribosomal Protein S15 as Functional Components of the *Escherichia coli* Ribosome, **233**, 606–614.

Protein heterotetramers
Separation and Characterization of Homo and Hetero-oligomers of the Intermediate Filament Proteins Desmin and Vimentin, **230**, 837–856.

Protein hinges
Normal Mode Analysis of G-actin, **230**, 186–195.

Protein homology
Homologous Recognition and Triplex Formation Promoted by RecA Protein between Duplex Oligonucleotides and Single-stranded DNA, **229**, 328–343.
Modeling Side-chain Conformation for Homologous Proteins Using an Energy-based Rotamer Search, **229**, 996–1006.
X-ray Analyses of Aspartic Proteinases. V. Structure and Refinement at 2·0 Å Resolution of the Aspartic Proteinase from *Mucor pusillus*, **230**, 260–283.
Prokaryotic Members of a New Family of Putative Helicases with Similarity to Transcription Activator SNF2, **230**, 684–688.
A Method to Configure Protein Side-chains from the Main-chain Trace in Homology Modelling, **231**, 849–860.

Protein hybrid
Mapping the Stability Determinants of Bacterial Tyrosyl Transfer RNA Synthetases by an Experimental Evolutionary Approach, **234**, 209–221.

Protein hydration
Distribution of Solvent Molecules Around Apolar Side-chains in Protein Crystals, **231**, 392–414.
Sequence Dependence of the Free Energy of *B–Z* Junction Formation in Deoxyoligonucleotides, **231**, 475–488.
Hydration of Proteins. A Comparison of Experimental Residence Times of Water Molecules Solvating the Bovine Pancreatic Trypsin Inhibitor with Theoretical Model Calculations, **231**, 1040–1048.
Contribution of Hydration to Protein Folding Thermodynamics. I. The Enthalpy of Hyderation, **232**, 639–659.
Contribution of Hydration to Protein Folding Thermodynamics. II. The Entropy and Gibbs Energy of Hydration, **232**, 660–679.
Crystal and Molecular Structure of d(CGTAGATCTACG) at 2·25 Å Resolution, **234**, 198–208.

Protein hydrodynamic calculations
Molecular Shape of Vinculin in Aqueous Solution, **229**, 146–152.

Protein hydrophobic
Crystal Structure of Hydrophobic Protein from Soybean; a Member of a New Cysteine-rich Family, **231**, 877–887.
Crystal Structural Analysis of Mutations in the Hydrophobic Cores of Barnase, **234**, 847–860.

Protein induced fit
Crystal Structure of an Anticholera Toxin Peptide Complex at 2·3 Å, **232**, 1169–1175.
Detailed Analysis of the Free and Bound Conformations of an Antibody. X-ray Structures of Fab 17/9 and Three Different Fab-peptide Complexes, **234**, 1098–1118.

Protein inhibitor
Crystals of Phospholipase A_2 Inhibitor. The Non-toxic Component of Vipoxin from the Venom of Bulgarian Viper (*Vipera ammodytes*), **229**, 1147–1149.
Crystallization and Preliminary X-ray Analysis of a Truncated Tissue Metalloproteinase Inhibitor $\Delta_{128\ 194}$ TIMP-2, **229**, 1163–1164.
Requirement for a Disulfide Bridge Near the Reactive Site of Protease Inhibitor SSI (*Streptomyces* Subtilisin Inhibitor) for its Inhibitory Action, **230**, 395–399.
Crystal Structure of the Complex between Human Carbonic Anhydrase II and the Aromatic Inhibitor 1,2,4-Triazole, **232**, 9–14.
Three-dimensional Structure of Influenza A N9 Neuraminidase and Its Complex with the Inhibitor 2-Deoxy 2,3-Dehydro-*N*-Acetyl Neuraminic Acid, **232**, 1069–1083.
Crystal Structure of Phospholipase C from *Bacillus cereus* Complexed with a Substrate Analog, **234**, 179–187.

Protein inhibitor complexes
Shape Complementarity at Protein/Protein Interfaces, **234**, 946–950.

Protein insertions/deletions
Empirical and Structural Models for Insertions and Deletions in the Divergent Evolution of Proteins, **229**, 1065–1082.

Protein interfacial activation
1.8 Å Refined Structure of the Lipase from *Geotrichum candidum*, **230**, 575–591.

Protein inter-helix distance prediction
Packing of Secondary Structural Elements in Proteins. Analysis and Prediction of Inter-helix Distrances, **233**, 464–479.

Protein Intermolecular contacts
Double Strand Packing in Hemoglobin S Fibers, **230**, 733–738.

Protein internal hydration water
Nuclear Magnetic Resonance Solution Structure of Dendrotoxin K from the Venom of *Dendroaspis polylepis polylepis*, **234**, 735–750.

Protein intramolecular distances
Solution Structure of Human Plasma Fibronectin under Different Solvent Conditions. Fluorescence Energy Transfer, Circular Dichroism and Light-scattering Studies, **230**, 625–640.

Protein kinase
Crystallization of a Deletion Mutant of the R-subunit of cAMP Dependent Protein Kinase, **230**, 1091–1093.
Purification and Crystallization of Human Cyclin-dependent Kinase 2, **230**, 1317–1319.
The Kin28 Protein Kinase is Associated with a Cyclin in *Saccharomyces cerevisiae*, **234**, 307–310.

Protein kinase C
Molecular Cloning and Expression of the Transformation Sensitive Epithelial Marker Stratifin. A Member of a Protein Family that has been Involved in the Protein Kinase C Signalling Pathway, **231**, 982–998.

Protein lateral aggregation
The Sequence of Cleavage of Fibrinopeptides from Fibrinogen is Important for Protofibril Formation and Enhancement of Lateral Aggregation in Fibrin Clots, **232**, 285–297.

Protein lattice models
Genetic Algorithms for Protein Folding Simulations, **231**, 75–81.
Lattice Neural Network Minimization. Application of Neural Network Optimization for Locating the Global-minimum Conformations of Proteins, **232**, 1157–1168.

Protein ligand interaction
Relocating a Negative Charge in the Binding Pocket of Trypsin, **230**, 934–949.
Three-dimensional Structure of the Complex between Acyl-Coenzyme A Binding Protein and Palmitoyl-Coenzyme A, **230**, 1260–1277.

Protein local alignment
A Local Alignment Method for Protein Structure Motifs, **233**, 488–497.

Protein loops
Accommodating Sequence Changes in β-Hairpins in Proteins, **229**, 428–447.

Protein median body
Sequence and Structure of a New Coiled Coil Protein from a Microtubule Bundle in *Giardia*, **231**, 521–530.

Protein mobility
Empirical Scale of Side-chain Conformational Entropy in Protein Folding, **231**, 825–839.

Protein modelling, comparative
Packing of Secondary Structural Elements in Proteins. Analysis and Prediction of Inter-helix Distrances, **233**, 464–479.
Comparative Protein Modelling by Satisfaction of Spatial Restraints, **234**, 779–815.

Protein module
The CUB Domain. A Widespread Module in Developmentally Regulated Proteins, **231**, 539–545.
Solution Structure of a Pair of Complement Modules by Nuclear Magnetic Resonance, **232**, 268–284.

Protein molecular dynamics
Methionyl-tRNA Synthetase Zinc Binding Domain. Three-dimensional Structure and Homology with Rubredoxin and *gag* Retroviral Proteins, **231**, 1078–1089.
Structure of the Complex of *lac* Repressor Headpiece and an 11 Base-pair Half-operator Determined by Nuclear Magnetic Resonance Spectroscopy and Restrained Molecular Dynamics, **234**, 446–462.
Comparative Protein Modelling by Satisfaction of Spatial Restraints, **234**, 779–815.

Protein molecular modeling
X-ray Structures of the Antigen-Binding Domains from Three Variants of Humanized anti-$p185^{HER2}$ Antibody 4D5 and Comparison with Molecular Modeling, **229**, 969–995.
Double Strand Packing in Hemoglobin S Fibers, **230**, 733–738.
Configurational Distribution of Denatured Phosphoglycerate Kinase, **231**, 840–848.

Protein molecular recognition
Three-dimensional Structure of the Tetragonal Crystal Form of Egg-white Avidin in its Functional Complex with Biotin at 2·7 Å Resolution, **231**, 698–710.
Molecular Recognition Mediated by Bound Water. A Mechanism for Star Activity of the Restriction Endonuclease *Eco*RI, **234**, 302–306.

Protein molecular shape
Molecular Shape of Vinculin in Aqueous Solution, **229**, 146–152.

Protein molecular surface
What is the Natural Boundary of a Protein in Solution?, **230**, 641–650.
Shape Complementarity at Protein/Protein Interfaces, **234**, 946–950.

Protein multi-domain
Solution Structure of Human Plasma Fibronectin under Different Solvent Conditions. Fluorescence Energy Transfer, Circular Dichroism and Light-scattering Studies, **230**, 625–640.

Protein multimers
Shape Complementarity at Protein/Protein Interfaces, **234**, 946–950.

Protein multiple sequence alignments
Prediction of Protein Secondary Structure at Better than 70% Accuracy, **232**, 584–599.

Protein mutant structure
Role of Arg115 in the Catalytic Action of Human Lysozyme. X-ray Structure of His115 and Glu115 Mutants, **233**, 524–535.
Hepatitis A Virus 3C Proteinase: Some Properties, Crystallization and Preliminary Crystallographic Characterization, **234**, 890–893.

Protein mutants
Fluorescence Energy Transfer Distance Measurements. The Hydrophobic Helical Hairpin of Colicin A in the Membrane Bound State, **230**, 1055–1067.
Crystals of Human Growth Hormone–Receptor Complexes. Extracellular Domains of the Growth Hormone and Prolactin Receptors and a Hormone Mutant Designed to Prevent Receptor Dimerization, **231**, 1133–1136.

Protein nearest-neighbor algorithm
Protein Secondary Structure Prediction Using Nearest-neighbor Methods, **232**, 1117–1129.

Protein neural network
Prediction of Protein Secondary Structure at Better than 70% Accuracy, **232**, 584–599.
Lattice Neural Network Minimization. Application of Neural Network Optimization for Locating the Global-minimum Conformations of Proteins, **232**, 1157–1168.

Protein normal mode analysis
Normal Mode Analysis of G-actin, **230**, 186–195.

Protein nucleic acid interaction
Conformational and Nucleic Acid Binding Studies on the Synthetic Nucleocapsid Protein of HIV-1, **229**, 94–104.

Protein nucleotide interaction
Crystal Structure of *Myxococcus xanthus* Nucleoside Diphosphate Kinase and its Interaction with a Nucleotide Substrate at 2·0 Resolution, **234**, 1230–1247.

Protein octahedral symmetry
Refined Crystal Structure of the Catalytic Domain of Dihydrolipoyl Transacetylase (E2p) from *Azotobacter vinelandii* at 2·6 Å Resolution, **230**, 1183–1199.

Protein oligomer
tRNA-Guanine Transglycosylase from *Escherichia coli*. Overexpression, Purification and Quaternary Structure, **231**, 489–497.

Protein oligosaccharide interactions
Crystallization of the Maltodextrin-binding Protein for Active Transport and Chemotaxis in Several Different Liganded and Mutant Forms, **230**, 675–678.

Protein overexpression
Cloning and Overexpression of the Triosephosphate Isomerase Genes from Psychrophilic and Thermophilic Bacteria. Structural Comparison of the Predicted Protein Sequences, **229**, 85–93.
Overproduction and Purification of Native and Queuine-lacking *Escherichia coli* $tRNA^{Asp}$. Role of the Wobble Base in $tRNA^{Asp}$ Acylation, **234**, 965–974.

Protein pattern recognition
Protein Structure Comparison by Alignment of Distance Matrices, **233**, 123–138.

Protein peptide interaction
Two-dimensional Nuclear Magnetic Resonance Analysis of a Labeled Peptide Bound to a Class II Major Histocompatibility Complex Molecule, **232**, 342–350.
X-ray Structure of a Monomeric Cyclophilin A-Cyclosporin A Crystal Complex at 2·1 Å Resolution, **234**, 1119–1130.

Protein periodic boundary
Stabilization of Protein Crystals by Electrostatic Interactions as Revealed by a Numerical Approach, **234**, 421–432.

Protein phase transition
X-rays Destroy the Lamellar Structure of Model Membranes, **229**, 291–294.
The Phase Transition between a Compact Denatured State and a Random Coil State in Staphylococcal Nuclease is First-Order, **232**, 718–724.

Protein Phe–His interaction
The (i, $i+4$) Phe–His Interaction Studied in an Alanine-based α-Helix, **230**, 284–291.

Protein polar side chains
Patterns for Prediction of Hydration around Polar Residues in Proteins, **229**, 419–427.

Protein purification
Purification and Crystallization of Human Cyclin-dependent Kinase 2, **230**, 1317–1319.
Purification, Circular Dichroism Analysis, Crystallization and Primary X-ray Diffraction Analysis of the F Plasmid CcdB Killer Protein, **231**, 513–515.
Purification, Crystallization and Preliminary X-ray Analysis of Inorganic Pyrophosphatase from *Thermus thermophilus*, **232**, 312–313.
Localization of Proteins HL29 and HL31 from *Haloarcula marismortui* within the 50 S Ribosomal Subunit by Chemical Crosslinking, **232**, 693–700.
Purification and Crystallization of Shiga Toxin from *Shigella dysenteriae*, **232**, 704–706.
Preliminary Crystallographic Study of Cyclohexadienyl Dehydratase from *Pseudomonas aeruginosa*, **232**, 992–994.

Protein quaternary structure
Evolution of Substrate Diversity in the Superfamily of Amino Acid Dehydrogenases. Prospects for Rational Chiral Synthesis, **234**, 938–945.

Protein recognition
Structures of the Lectin IV of *Griffonia simplicifolia* and its Complex with the Lewis b Human Blood Group Determinant at 2·0 Å Resolution, **230**, 950–965.

Protein refinement methods
Main-chain Bond Lengths and Bond Angles in Protein Structures, **231**, 1049–1067.

Protein RNA interactions
Translational Repression by the Bacteriophage T4 Gene *32* Protein Involves Specific Recognition of an RNA Pseudoknot Structure, **232**, 89–104.

Protein search ms
Genetic Algorithms for Protein Folding Simulations, **231**, 75–81.

Protein searching
Alignment and Searching for Common Protein Folds Using a Data Bank of Structural Templates, **231**, 735–752.

Protein secondary structure
Left-handed Polyproline II Helices Commonly Occur in Globular Proteins, **229**, 472–493.
Solution Structure of a Variant of Human Pancreatic Secretory Trypsin Inhibitor Determined by Nuclear Magnetic Resonance Spectroscopy, **229**, 695–706.
Prediction of Protein Secondary Structure at Better than 70% Accuracy, **232**, 584–599.
Secondary Structure and Temperature-induced Unfolding and Refolding of Ribonuclease T_1 in Aqueous Solution. A Fourier Transform Infrared Spectroscopic Study, **232**, 967–981.
Protein Secondary Structure Prediction Using Nearest-neighbor Methods, **232**, 1117–1129.
A Two-dimensional Model at the Nucleotide Level for the Central Hairpin of Coliphage Qβ RNA, **233**, 245–260.
Anion Binding Sites in Protein Structures, **234**, 463–482.
Local Conformations of Peptides Representing the Entire Sequence of Bovine Pancreatic Trypsin Inhibitor and Their Roles in Folding, **234**, 861–878.
The Limits of Protein Secondary Structure Prediction Accuracy from Multiple Sequence Alignment, **234**, 951–957.

Protein secondary structure prediction
Prediction of Protein Secondary Structure at Better than 70% Accuracy, **232**, 584–599.

Protein secretion
Characterization of the *Neisseria* Iga_β-core, **234**, 579–593.

Protein sequence
Structure of *Sesbania* Mosaic Virus at 4·7 Å Resolution and Partial Sequence of the Coat Protein, **229**, 20–25.
Cloning and Characterization of a Novel *Bacillus thuringiensis* Cytolytic Delta-Endotoxin, **229**, 319–327.
Alignment and Searching for Common Protein Folds Using a Data Bank of Structural Templates, **231**, 735–752.
An Avian αB-Crystallin. Non-lens Expression and Sequence Similarities with both Small (HSP27) and Large (HSP70) Heat Shock Proteins, **232**, 1221–1226.
Structure Analysis of Cytochrome c_3 From *Desulfovibrio vulgaris* Hildenborough at 1·9 Å Resolution, **234**, 680–699.
Detecting Frame Shifts by Amino Acid Sequence Comparison, **234**, 1140–1157.
Molecular Cloning of a P-type ATPase Gene from the Cyanobacterium *Synechocystis* sp. PCC 6803. Homology to Eukaryotic Ca^{2+}-ATPases, **234**, 1284–1289.

Protein sequence alignment
A Structural Basis for Sequence Comparisons. An Evaluation of Scoring Methodologies, **233**, 716–738.
The Limits of Protein Secondary Structure Prediction Accuracy from Multiple Sequence Alignment, **234**, 951–957.

Protein sequence analysis
Template-directed and Template-free RNA Synthesis by Qβ Replicase, **231**, 175–179.
Ionic Interactions in the Coiled-coil Domain of Laminin Determine the Specificity of Chain Assembly, **231**, 311–323.
Quadratic Minimization of Predictors for Protein Secondary Structure. Application to Transmembrane α-Helices, **232**, 165–191.
Detecting Frame Shifts by Amino Acid Sequence Comparison, **234**, 1140–1157.

Protein sequence homology
The CUB Domain. A Widespread Module in Developmentally Regulated Proteins, **231**, 539–545.

Protein sequence motif
Non-random Distribution of Amino Acids in the Transmembrane Segments of Human Type I Single Span Membrane Proteins, **229**, 602–608.

Protein sequence prediction
A Structural Basis for Sequence Comparisons. An Evaluation of Scoring Methodologies, **233**, 716–738.

Protein sequence-structure alignment
Prediction of Protein Structure by Evaluation of Sequence-structure Fitness. Aligning Sequences to Contact Profiles Derived from Three-dimensional Structures, **232**, 805–825.

Protein shape complementarity
Shape Complementarity at Protein/Protein Interfaces, **234**, 946–950.

Protein side-chain conformation
Modeling Side-chain Conformation for Homologous Proteins Using an Energy-based Rotamer Search, **229**, 996–1006.
Backbone-dependent Rotamer Library for Proteins. Application to Side-chain Prediction, **230**, 543–574.
A Method to Configure Protein Side-chains from the Main-chain Trace in Homology Modelling, **231**, 849–860.

Protein solvent distribution
Distribution of Solvent Molecules Around Apolar Side-chains in Protein Crystals, **231**, 392–414.

Protein stability
Protein Folding in the Absence of the Solvent Ordering Contribution to the Hydrophobic Interaction, **229**, 502–511.
Similar Hydrophobic Replacements of Leu99 and Phe153 within the Core of T4 Lysozyme Have Different Structural and Thermodynamic Consequences, **229**, 747–769.
On the pH Dependence of Protein Stability, **231**, 459–474.
Stability and Folding Kinetics of Ribonuclease T_1 are Strongly Altered by the Replacement of *Cis*-proline 39 with Alanine, **231**, 897–912.
Long-Range Surface Charge–Charge Interactions in Proteins. Comparison of Experimental Results with Calculations from a Thoretical Method, **232**, 574–583.
Crystal Structure of a Porcine Pancreatic Phospholipase A_2 Mutant. A Large Conformational Change Caused by the F63V Point Mutation, **232**, 839–855.
Step-wise Mutation of Barnase to Binase. A Procedure for Engineering Increased Stability of Proteins and an Experimental Analysis of the Evolution of Protein Stability, **233**, 305–312.
The Redox Properties of Protein Disulfide Isomerase (DsbA) of *Escherichia coli* Result from a Tense Conformation of its Oxidized Form, **233**, 559–566.
Crystal Structural Analysis of Mutations in the Hydrophobic Cores of Barnase, **234**, 847–860.

Protein structural change
Three-dimensional Structure of an Anti-steroid Fab′ and Progesterone-Fab′ Complex, **231**, 103–118.

Protein structural comparison
Cloning and Overexpression of the Triosephosphate Isomerase Genes from Psychrophilic and Thermophilic Bacteria. Structural Comparison of the Predicted Protein Sequences, **229**, 85–93.
Identification of Tertiary Structure Resemblance in Proteins Using a Maximal Common Subgraph Isomorphism Algorithm, **229**, 707–721.
Energetics of Heterodimer Formation among Gramicidin Analogues with an NH_2-terminal Addition or Deletion. Consequences of Missing a Residue at the Join in the Channel, **231**, 1102–1121.
A Structural Basis for Sequence Comparisons. An Evaluation of Scoring Methodologies, **233**, 716–738.

Protein structure
Preliminary Crystallographic Analysis of Sweet Potato Beta Amylase, **229**, 253–254.
Domain Closure in Adenylate Kinase. Joints on Either Side of Two Helices Close Like Neighboring Fingers, **229**, 494–501.
Two-dimensional Crystals of the Molecular Chaperone GroEL Reveal Structural Plasticity, **229**, 579–584.
Similar Hydrophobic Replacements of Leu99 and Phe153 within the Core of T4 Lysozyme Have Different Structural and Thermodynamic Consequences, **229**, 747–769.
Structure of Hen Lysozyme in Solution, **229**, 930–944.
Three-dimensional Structure of the Lipoyl Domain from *Bacillus stearothermophilus* Pyruvate Dehydrogenase Multienzyme Complex, **229**, 1037–1048.
Empirical and Structural Models for Insertions and Deletions in the Divergent Evolution of Proteins, **229**, 1065–1082.
The $(i, i+4)$ Phe–His Interaction Studied in an Alanine-based α-Helix, **230**, 284–291.
The High-resolution Structure of the Peripheral Subunit-binding Domain of Dihydrolipoamide Acetyltransferase from the Pyruvate Dehydrogenase Multienzyme Complex of *Bacillus stearothermophilus*, **230**, 323–341.
Exploring the Limits of Precision and Accuracy of Protein Structures Determined by Nuclear Magnetic Resonance Spectroscopy, **231**, 82–102.
The Spatial Structure of the Class II L-Fuculose-1-phosphate Aldolase from *Escherichia coli*, **231**, 549–553.

Genetic and Biochemical Analysis of the Integration Host Factor of *Escherichia coli*, **231**, 646–657.
High-resolution Solution Structure of Calcium-loaded Calbindin D9k, **231**, 711–734.
Main-chain Bond Lengths and Bond Angles in Protein Structures, **231**, 1049–1067.
Structure Determination and Refinement of Human Alpha Class Glutathione Transferase A1-1, and a Comparison with the Mu and Pi Class Enzymes, **232**, 192–212.
Three-dimensional Architecture of Human α2-Macroglobulin Transformed with Methylamine, **232**, 522–529.
A Model of the Three-dimensional Structure of Ice Nucleation Proteins, **232**, 709–717.
Determination of the Disulphide Bonding Pattern in Proteins by Local and Global Analysis of Nuclear Magnetic Resonance Data. Application to Flavoridin, **232**, 897–906.
The Nuclear Magnetic Resonance Solution Structure of Flavoridin, an Antagonist of the Platelet GP IIb-IIIa Receptor, **232**, 907–925.
Protein Secondary Structure Prediction Using Nearest-neighbor Methods, **232**, 1117–1129.
Role of Arg115 in the Catalytic Action of Human Lysozyme. X-ray Structure of His115 and Glu115 Mutants, **233**, 524–535.
How Consistent are Molecular Dynamics Simulations? Comparing Structure and Dynamics in Reduced and Oxidized *Escherichia coli* Thioredoxin, **233**, 766–780.
Three-dimensional Structure in Solution of the Calcium Channel Blocker ω-Conotoxin, **234**, 405–420.
Atomic Structure of a Cytochrome *c*′ with an Unusual Ligand-controlled Dimer Dissociation at 1·8 Å Resolution, **234**, 433–445.
Dissecting the Structure of a Partially Folded Protein. Circular dichroism and Nuclear Magnetic Resonance Studies of Peptides from Ubiquitin, **234**, 483–492.
Crystal Structure of Canine and Bovine Granulocyte-colony Stimulating Factor (G-CSF), **234**, 640–653.
Crystallographic Refinement of Bowman-Birk Type Protease Inhibitor A-II from Peanut (*Arachis hypogaea*) at 2·3 Å Resolution, **234**, 722–734.
Nuclear Magnetic Resonance Solution Structure of Dendrotoxin K from the Venom of *Dendroaspis polylepis polylepis*, **234**, 735–750.

Protein structure alignment
Protein Structure Comparison by Alignment of Distance Matrices, **233**, 123–138.

Protein structure motif
Identification of Tertiary Structure Resemblance in Proteins Using a Maximal Common Subgraph Isomorphism Algorithm, **229**, 707–721.
A Local Alignment Method for Protein Structure Motifs, **233**, 488–497.

Protein structure prediction
Conformational Filtering in Polypeptides and Proteins, **229**, 125–145.
Fragment Ranking in Modelling of Protein Structure. Conformationally Constrained Environmental Amino Acid Substitution Tables, **229**, 194–220.
Predicted Secondary Structure for the Src Homology 3 Domain, **229**, 295–305.
Estimation and Use of Protein Backbone Angle Probabilities, **229**, 448–460.
Left-handed Polyproline II Helices Commonly Occur in Globular Proteins, **229**, 472–493.
Modeling the Three-dimensional Structure of RNA Using Discrete Nucleotide Conformational Sets, **229**, 1049–1064.
Empirical and Structural Models for Insertions and Deletions in the Divergent Evolution of Proteins, **229**, 1065–1082.
Backbone-dependent Rotamer Library for Proteins. Application to Side-chain Prediction, **230**, 543–574.
Rotamers: To be or not to be? An Analysis of Amino Acid Side-chain Conformations in Globular Proteins, **230**, 592–612.
Exploring the Limits of Precision and Accuracy of Protein Structures Determined by Nuclear Magnetic Resonance Spectroscopy, **231**, 82–102.
A Method to Configure Protein Side-chains from the Main-chain Trace in Homology Modelling, **231**, 849–860.
Protein Structures from Distance Inequalities, **231**, 861–869.
Quadratic Minimization of Predictors for Protein Secondary Structure. Application to Transmembrane α-Helices, **232**, 165–191.
Prediction of Protein Structure by Evaluation of Sequence-structure Fitness. Aligning Sequences to Contact Profiles Derived from Three-dimensional Structures, **232**, 805–825.
Packing of Secondary Structural Elements in Proteins. Analysis and Prediction of Inter-helix Distrances, **233**, 464–479.
Hamiltonians for Protein Tertiary Structure Prediction Based on Three-dimensional Environment Principles, **233**, 480–487.
The Limits of Protein Secondary Structure Prediction Accuracy from Multiple Sequence Alignment, **234**, 951–957.

Protein structure refinement
A Structure Refinement Method Based on Molecular Dynamics in Four Spatial Dimensions, **234**, 751–762.

Protein substitution tables
Fragment Ranking in Modelling of Protein Structure. Conformationally Constrained Environmental Amino Acid Substitution Tables, **229**, 194–220.

Protein subunit interaction
Mutation Ala2 → Ser Destabilizes Intersubunit Interactions in the Molecular Chaperone GroEL, **231**, 58–64.
Assembly of Multimeric Proteins. Effect of Mutations in the α-Subunit on Membrane Assembly and Activity of Pyridine Nucleotide Transhydrogenase, **234**, 8–13.

Protein subunit structure
Crystallization and Preliminary X-ray Studies of the Basic Lectin from Winged Bean (*Psophocarpus tetragonolobus*), **229**, 558–560.

Protein superfamily
Sweet-tasting Protein Monellin is Related to the Cystatin Family of Thiol Proteinase Inhibitors, **230**, 689–694.

Protein surface epitopes
The Orientation of Porin OmpF in the Outer Membrane of *Escherichia coli*, **233**, 400–413.

Protein surface hydration
Hydration of Proteins. A Comparison of Experimental Residence Times of Water Molecules Solvating the Bovine Pancreatic Trypsin Inhibitor with Theoretical Model Calculations, **231**, 1040–1048.

Protein synthesis
Release Factor-dependent False Stops are Infrequent in *Escherichia coli*, **230**, 41–50.
Undiscriminating Codon Reading with Adenosine in the Wobble Position, **230**, 739–749.
Synthesis of Proteins in *Escherichia coli* is Limited by the Concentration of Free Ribosomes. Expression from Reporter Genes does not always Reflect Functional mRNA Levels, **231**, 678–688.

Protein synthesis, initiation factor-3
Translation Initiation Complex Formation with 30 S Ribosomal Particles Mutated at Conserved Positions in the 3′-Minor Domain of 16 S RNA, **234**, 14–27.

Protein taxonomy
Left-handed Polyproline II Helices Commonly Occur in Globular Proteins, **229**, 472–493.

Protein ternary complex
Crystal Structure of a Ternary Complex of *Escherichia coli* Malate Dehydrogenase Citrate and NAD at 1·9 Å Resolution, **232**, 213–222.

Protein tertiary interaction
Monitoring of the Cooperative Unfolding of the *sunY* Group I Intron of Bacteriophage T4. The Active form of the *sunY* Ribozyme is Stabilized by Multiple Interactions with 3′ Terminal Intron Components, **234**, 331–346.

Protein tertiary structure
Solution Structure of a Variant of Human Pancreatic Secretory Trypsin Inhibitor Determined by Nuclear Magnetic Resonance Spectroscopy, **229**, 695–706.
X-ray Analyses of Aspartic Proteinases. V. Structure and Refinement at 2·0 Å Resolution of the Aspartic Proteinase from *Mucor pusillus*, **230**, 260–283.
A Method to Configure Protein Side-chains from the Main-chain Trace in Homology Modelling, **231**, 849–860.

Protein tertiary template method
Fragment Ranking in Modelling of Protein Structure. Conformationally Constrained Environmental Amino Acid Substitution Tables, **229**, 194–220.

Protein thermodynamics
Thermodynamic and Structural Analysis of the Folding/Unfolding Transitions of the *Escherichia coli* Molecular Chaperone DnaK, **232**, 680–692.

Protein thermostability
Crystallization and Preliminary X-ray Analysis of the β-Galactosidase from the Extreme Thermophilic Archaebacterium *Sulfolobus solfataricus*, **229**, 561–563.
Crystallization and Preliminary X-ray Analysis of an NAD^+-dependent Alcohol Dehydrogenase from the Extreme Thermophilic Archaebacterium *Sulfolobus solfataricus*, **229**, 782–784.

Protein unfolding
Reversible Pressure Dissociation of R17 Bacteriophage. The Physical Individuality of Virus Particles, **231**, 999–1008.
Protein Unfolding Pathways Explored Through Molecular Dynamics Simulations, **232**, 600–619.
Contribution of Hydration to Protein Folding Thermodynamics. I. The Enthalpy of Hyderation, **232**, 639–659.
Contribution of Hydration to Protein Folding Thermodynamics, **232**, 660–679.
Dissecting the Structure of a Partially Folded Protein. Circular dichroism and Nuclear Magnetic Resonance Studies of Peptides from Ubiquitin, **234**, 483–492.

Protein variable regions
Fragment Ranking in Modelling of Protein Structure. Conformationally Constrained Environmental Amino Acid Substitution Tables, **229**, 194–220.

Protein ϕ–ψ probabilities
Estimation and Use of Protein Backbone Angle Probabilities, **229**, 448–460.

Proteinase A
Crystallization and Preliminary Crystallographic Characterization of Aspartic Proteinase-A from Baker's Yeast and Its Complexes with Inhibitors, **232**, 701–703.

Proteinase aspartic
X-ray Analyses of Aspartic Proteinases. V. Structure and Refinement at 2·0 Å Resolution of the Aspartic Proteinase from *Mucor pusillus*, **230**, 260–283.
Crystallization of Inhibited Aspartic Proteinase from *Candida albicans*, **234**, 1266–1269.

Proteinase inhibitor
Nuclear Magnetic Resonance Solution Structure of Dendrotoxin K from the Venom of *Dendroaspis polylepis polylepis*, **234**, 735–750.
The Structures of Native Phosphorylated Chicken Cystatin and of a Recombinant Unphosphorylated Variant in Solution, **234**, 1048–1059.

Proteinase multicatalytic
Evidence Indicating that the Human Proteasome is a Complex Dimer, **229**, 14–19.
Preliminary X-ray Crystallographic Study of the Proteasome from *Thermoplasma acidophilum*, **234**, 881–884.
Structural Features of the 26 S Proteasome Complex, **234**, 932–937.

Proteinase, picornaviral
Hepatitis A Virus 3C Proteinase: Some Properties, Crystallization and Preliminary Crystallographic Characterization, **234**, 890–893.

Proteinase, retroviral
Crystallization and Preliminary X-ray Investigation of Recombinant Simian Immunodeficiency Virus Proteinase, **231**, 1139–1142.

Protein-DNA interaction
Crystallographic Characterization of a PH04–DNA Complex, **229**, 566–569.
Hierarchy of Base-pair Preference in the Binding Domain of the Bacteriophage T7 Promoter, **229**, 805–811.
Specificity of the Mnt Protein. Independent Effects of Mutations at Different Positions in the Operator, **229**, 821–826.
Phenyl Azide-mediated Photocrosslinking Analysis of Cro–DNA Interaction, **230**, 453–460.
Plant bZIP Protein DNA Binding Specificity, **230**, 1131–1144.
Genetic and Biochemical Analysis of the Integration Host Factor of *Escherichia coli*, **231**, 646–657.
Formation of a RuvAB-Holliday Junction Complex *in Vitro*, **232**, 397–405.
Crystallization and Preliminary X-ray Analysis of the DNA Binding Domain of the Hin Recombinase with Its DNA Binding Site, **232**, 982–986.
The X-ray Structure of the GCN4-bZIP Bound to ATF/CREB Site DNA Shows the Complex Depends on DNA Flexibility, **233**, 139–154.
Structure of the Complex of *lac* Repressor Headpiece and an 11 Base-pair Half-operator Determined by Nuclear Magnetic Resonance Spectroscopy and Restrained Molecular Dynamics, **234**, 446–462.
Operator Sequence Context Influences Amino Acid–Base-pair Interactions in 434 Repressor–Operator Complexes, **234**, 542–553.
Determination of the Nuclear Magnetic Resonance Solution Structure of an *Antennapedia* Homeodomain–DNA Complex, **234**, 1084–1097.

Protein-protein interaction
Assembly of the Bacteriophage T4 Replication Machine Requires the Acidic Carboxy Terminus of Gene *32* Protein, **229**, 398–418.
Comparison of the Dynamics of an Engineered Insulin Monomer and Dimer by Acid-Quenched Amide Proton Exchange. Non-local Stabilization of Interchain Hydrogen Bonds by Dimerization, **230**, 387–394.
Crystal Structures of Rat Anionic Trypsin Complexed with the Protein Inhibitors APPI and BPTI, **230**, 919–933.
Negative Co-dominant Inhibition of recA Protein Function. Biochemical Properties of the recA1, recA13 and recA56 Proteins and the Effect of recA56 Protein on the Activities of the Wild-type recA Protein Function *in Vitro*, **234**, 72–86.
Comparison of a Structural and a Functional Epitope, **234**, 554–563.

Proteins pancreatic
Crystallization of Pancreatic Procolipase and of its Complex with Pancreatic Lipase, **229**, 552–554.
Solution Structure of a Variant of Human Pancreatic Secretory Trypsin Inhibitor Determined by Nuclear Magnetic Resonance Spectroscopy, **229**, 695–706.
Isolation, Crystallization and Preliminary Diffraction Analyses of Human Pancreatic α-Amylase, **230**, 1084–1085.

Proteolysis
Mapping of the Zinc Binding Domain of *Escherichia coli* Methionyl-tRNA Synthetase, **231**, 1068–1077.

Proteolytic stability
Crystallization of Single-Chain Fv Proteins, **234**, 897–901.

Prothymosin α
GAG Triplets as Splice Acceptors of Last Resort. An Unusual Form of Alternative Splicing in Prothymosin α Pre-mRNA, **234**, 281–288.

Protofibrils
The Sequence of Cleavage of Fibrinopeptides from Fibrinogen is Important for Protofibril Formation and Enhancement of Lateral Aggregation in Fibrin Clots, **232**, 285–297.

Pseudoknot
Translational Repression by the Bacteriophage T4 Gene *32* Protein Involves Specific Recognition of an RNA Pseudoknot Structure, **232**, 89–104.
A Shortened Form of the *Tetrahymena thermophila* Group I Intron Can Catalyze the Complete Splicing Reaction *in trans*, **233**, 629–643.

Pseudomonas
Identification of a *cis*-acting Sequence within the *Pm* Promoter of the TOL Plasmid which Confers XylS-mediated Responsiveness to Substituted Benzoates, **230**, 699–703.
Crystallization and Preliminary X-ray Studies of a Protease from *Pseudomonas aeruginosa*, **230**, 1315–1316.
Preliminary Analysis of Crystals of 4-Oxalocrotonate Tautomerase, an Enzyme Composed of Unusually Small Monomers, **231**, 509–512.
A Model of the Three-dimensional Structure of Ice Nucleation Proteins, **232**, 709–717.
Preliminary Crystallographic Study of Cyclohexadienyl Dehydratase from *Pseudomonas aeruginosa*, **232**, 992–994.

Pseudomonas* subsp. *cellulosa
Crystallization and Preliminary X-ray Analysis of the Catalytic Domain of Xylanase A from *Pseudomonas fluorescens* subspecies *cellulosa*, **229**, 246–248.

Psychrophilic
Cloning and Overexpression of the Triosephosphate Isomerase Genes from Psychrophilic and Thermophilic Bacteria. Structural Comparison of the Predicted Protein Sequences, **229**, 85–93.

Pyridoxal 5′-phosphate
Strand-specific Binding to Duplex DNA Ends by the Subunits of the *Escherichia coli* RecBCD Enzyme, **229**, 67–78.
Crystallization and Preliminary X-ray Data for the A-Isozyme of *O*-Acetylserine Sulfhydrylase from *Salmonella typhimurium*, **231**, 1130–1132.

Pyrimidine
Refined Structures of Substrate-bound and Phosphate-bound Thymidylate Synthase from *Lactobacillus casei*, **232**, 1101–1116.

Pyruvate dehydrogenase
Three-dimensional Structure of the Lipoyl Domain from *Bacillus stearothermophilus* Pyruvate Dehydrogenase Multienzyme Complex, **229**, 1037–1048.
Refined Crystal Structure of the Catalytic Domain of Dihydrolipoyl Transacetylase (E2p) from *Azotobacter vinelandii* at 2·6 Å Resolution, **230**, 1183–1199.

Pyruvoyl cofactor
Refined Structure of the Pyruvoyl-dependent Histidine Decarboxylase from *Lactobacillus* 30a, **230**, 516–528.

Qβ
Structural Analysis by Energy Dot Plot of a Large mRNA, **233**, 261–269.

Queuine
tRNA-Guanine Transglycosylase from *Escherichia coli*. Overexpression, Purification and Quaternary Structure, **231**, 489–497.
Overproduction and Purification of Native and Queuine-lacking *Escherichia coli* $tRNA^{Asp}$. Role of the Wobble Base in $tRNA^{Asp}$ Acylation, **234**, 965–974.

Quinol oxidase
Crystallization and Preliminary X-ray Analysis of the Periplasmic Fragment of CyoA–a Subunit of the *Escherichia coli* Cytochrome *o* Complex, **229**, 794–796.

Quinolones
The F Plamid CcdB Protein Induces Efficient ATP-dependent DNA Cleavage by Gyrase, **234**, 534–541.

Quinoprotein
Crystallization and Preliminary Crystallographic Investigations of the Soluble Glucose Dehydrogenase from *Acinetobacter calcoaceticus*, **233**, 784–786.

R. meliloti
Nucleotide Sequence and Characterization of *Rhizobium meliloti* Nodulation Competitiveness Genes *nfe*, **229**, 570–576.

R17 bacteriophage
Reversible Pressure Dissociation of R17 Bacteriophage. The Physical Individuality of Virus Particles, **231**, 999–1008.

Radiation damage
X-rays Destroy the Lamellar Structure of Model Membranes, **229**, 291–294.

Raman spectroscopy
Structural Studies of the Enveloped dsRNA Bacteriophage φ6 of *Pseudomonas syringae* by Raman Spectroscopy. I. The Virion and Its Membrane Envelope, **230**, 461–472.
Structural Studies of the Enveloped dsRNA Bacteriophage φ6 of *Pseudomonas syringae* by Raman Spectroscopy. II. Nucleocapsid Structure and Thermostability of the Virion, Nucleocapsid and Polymerase Complex, **230**, 473–482.
Investigations of Ligand Association and Dissociation Rates in the "Open" and "Closed" States of Myoglobin, **233**, 155–166.

RAP1
Distortion of the DNA Double Helix by RAP1 at Silencers and Multiple Telomeric Binding Sites, **231**, 293–310.

Rapamycin
Atomic Structures of the Human Immunophilin FKBP-12 Complexes with FK506 and Rapamycin, **229**, 105–124.

***Rec*A**
Homologous Recognition and Triplex Formation Promoted by RecA Protein between Duplex Oligonucleotides and Single-stranded DNA, **229**, 328–343.
The LexA Repressor Binds Within the Deep Helical Groove of the Activated RecA Filament, **231**, 29–40.
Homologous DNA Targeting with RecA Protein-coated Short DNA Probes and Electron Microscope Mapping on Linear Duplex Molecules, **232**, 779–791.
Mutagenesis of the P-loop Motif in the ATP Binding Site of the RecA Protein from *Escherichia coli*, **232**, 1048–1059.
Two Mutant RecA Proteins Possessing pH-dependent Strand Exchange Activity Exhibit pH-dependent Presynaptic Filament Formation, **233**, 59–66.
Negative Co-dominant Inhibition of recA Protein Function. Biochemical Properties of the recA1, recA13 and recA56 Proteins and the Effect of recA56 Protein on the Activities of the Wild-type recA Protein Function *in Vitro*, **234**, 72–86.

***Rec*F**
RecQ DNA Helicase of *Escherichia coli*. Characterization of the Helix-unwinding Activity with Emphasis on the Effect of Single-stranded DNA-binding Protein, **230**, 1145–1150.

RecBCD
Strand-specific Binding to Duplex DNA Ends by the Subunits of the *Escherichia coli* RecBCD Enzyme, **229**, 67–78.

recBCD
Biochemical Characterization of a Mutant recBCD Enzyme, the recB2109CD Enzyme, Which Lacks χ-specific, but Not Non-specific, Nuclease Activity, **231**, 605–620.
The Mutant recBCD Enzyme, recB2109CD Enzyme, Has Helicase Activity but Does Not Promote Efficient Joint Molecule Formation *in Vitro*, **231**, 621–633.

Receptor
Crystallization and Preliminary Crystallographic Analysis of a TNF-β–55 kDa TNF Receptor Complex, **229**, 555–557.
Metal-induced Conformational Changes in Transferrins, **229**, 585–590.
Role of DNA–Protein Interactions in Bacteriophage ΦX174 DNA Injection, **229**, 671–684.
Expression of the Human Placental Folate Receptor Transcript is Regulated in Human Tissues. Organization and Full Nucleotide Sequence of the Gene, **229**, 1175–1183.
Crystallographic Studies on a Family of Cellular Lipophilic Transport Proteins. Refinement of P2 Myelin Protein and the Structure Determination and Refinement of Cellular Retinol-binding Protein in Complex with All-*trans*-retinol, **230**, 1225–1246.
Mutations that Affect Separate Functions of OmpR the Phosphorylated Regulator of Porin Transcription in *Escherichia coli*, **231**, 261–273.
Asp Ligand Provides the Trigger for Closure of Transferrin Molecules. Direct Evidence from X-ray Scattering Studies of Site-specific Mutants of the N-terminal Half-molecule of Human Transferrin, **231**, 554–558.
Influence of Fluctuations on DNA Curvature. A Comparison of Flexible and Static Wedge Models of Intrinsically, **232**, 530–554.
Refined Structures of the Ligand-binding Domain of the Aspartate Receptor from *Salmonella typhimurium*, **232**, 555–573.
Crystallographic Refinement and Structure Analysis of the Complex of Wheat Germ Agglutinin with a Bivalent Sialoglycopeptide from Glycophorin A, **232**, 620–638.
The 1·7 Å Refined X-ray Structure of the Periplasmic Glucose/Galactose Receptor from *Salmonella typhimurium*, **233**, 739–752.

Recombination
Homologous Recognition and Triplex Formation Promoted by RecA Protein between Duplex Oligonucleotides and Single-stranded DNA, **229**, 328–343.
Crossed-Stranded DNA Structures for Investigating the Molecular Dynamics of the Holliday Junction, **229**, 812–820.
Significance of Duplicated Flagellin Genes in *Campylobacter*, **230**, 359–363.
Formation of a Single Base Mismatch Impedes Spontaneous DNA Branch Migration, **230**, 413–424.
Segment Substitutions in Alpha Satellite DNA. Unusual Structure of Human Chromosome 3-specific Alpha Satellite Repeat Unit, **231**, 516–520.
Biochemical Characterization of a Mutant recBCD Enzyme, the recB2109CD Enzyme, Which Lacks χ-specific, but Not Non-specific, Nuclease Activity, **231**, 605–620.
The Mutant recBCD Enzyme, recB2109CD Enzyme, Has Helicase Activity but Does Not Promote Efficient Joint Molecule Formation *in Vitro*, **231**, 621–633.
DNA Conformation Induced by the Bacteriophage T4 UvsX Protein Appears Identical to the Conformation Induced by the *Escherichia coli* RecA Protein, **232**, 1–4.
Formation of a RuvAB-Holliday Junction Complex *in Vitro*, **232**, 397–405.
Two Mutant RecA Proteins Possessing pH-dependent Strand Exchange Activity Exhibit pH-dependent Presynaptic Filament Formation, **233**, 59–66.
Resolution of Synthetic χ Structures by the FLP Site-specific Recombinase, **234**, 522–533.

Recombination illegitimate
Two Secretory Protein Genes in *Chironomus tentans* Have Arisen by Gene Duplication and Exhibit Different Developmental Expression Patterns, **231**, 324–334.

Redox potential
Three-dimensional Structure of Lipoamide Dehydrogenase from *Pseudomonas fluorescens* at 2·8 Å Resolution. Analysis of Redox and Thermostability Properties, **230**, 1200–1215.
The Redox Properties of Protein Disulfide Isomerase (DsbA) of *Escherichia coli* Result from a Tense Conformation of its Oxidized Form, **233**, 559–566.

Reductases
Common Ring Motifs in Proteins Involving Asparagine or Glutamine Amide Groups Hydrogen-bonded to Main-chain Atoms, **231**, 888–896.

Release factor
Release Factor-dependent False Stops are Infrequent in *Escherichia coli*, **230**, 41–50.

Replication
Precise Deletions in Large Bacterial Genomes by Vector-mediated Excision (VEX). The *trfA* Gene of Promiscuous Plasmid RK2 is Essential for Replication in Several Gram-negative Hosts, **230**, 174–185.
Studies of Bacteriophage P2 DNA Replication. The DNA Sequence of the *Cis*-acting Gene *A* and *ori* Region and Construction of a P2 Mini-chromosome, **231**, 361–374.
Information Analysis of Sequences that Bind the Replication Initiator RepA, **233**, 219–230.

Replication origin
Studies of Bacteriophage P2 DNA Replication. The DNA Sequence of the *Cis*-acting Gene *A* and *ori* Region and Construction of a P2 Mini-chromosome, **231**, 361–374.

Replication processivity factor
Sliding Clamps of DNA Polymerases, **234**, 915–925.

Reporter genes
Synthesis of Proteins in *Escherichia coli* is Limited by the Concentration of Free Ribosomes. Expression from Reporter Genes does not always Reflect Functional mRNA Levels, **231**, 678–688.

Repression
Effects of a Single Base-pair Deletion in the Bacteriophage λ *P*RM Promoter. Repression of *P*RM by Repressor Bound at *O*R2 and by RNA Poiymerase Bound at *P*R, **229**, 37–51.
Mutations that Affect Separate Functions of OmpR the Phosphorylated Regulator of Porin Transcription in *Escherichia coli*, **231**, 261–273.

Repressor
Highly Cooperative DNA Binding by the Coliphage HK022 Repressor, **230**, 1108–1130.
The Phage 434 OR2/R1-69 Complex at 2·5 Å Resolution, **232**, 826–838.

Repressor bacteriophage 434
The Bacteriophage 434 Right Operator. Roles of OR1, OR2 and OR3, **230**, 28–40.
Operator Sequence Context Influences Amino Acid–Base-pair Interactions in 434 Repressor–Operator Complexes, **234**, 542–553.

Repressor bacteriophage lambda
Modulation of *P*RM Activity by the Lambda *P*R Promoter in Both the Presence and Absence of Repressor, **232**, 792–804.

Repressor *lac*
In Vivo Thermodynamic Analysis of Repression with and without Looping in *lac* Constructs. Estimates of Free and Local *lac* Repressor Concentrations and of Physical Properties of a Region of Supercoiled Plasmid DNA *in Vivo*, **230**, 161–173.
Origin of the Asymmetrical Contact between *lac* Repressor and *lac* Operator DNA, **233**, 389–399.
Structure of the Complex of *lac* Repressor Headpiece and an 11 Base-pair Half-operator Determined by Nuclear Magnetic Resonance Spectroscopy and Restrained Molecular Dynamics, **234**, 446–462.

Repressor LexA
Spacing Requirements Between LexA Operator Half-sites can be Relaxed by Fusing the LexA DNA Binding Domain with some Alternative Dimerization Domains, **229**, 1–7.
The LexA Repressor Binds Within the Deep Helical Groove of the Activated RecA Filament, **231**, 29–40.

Repressor *trp*
Refined Solution Structures of the *Escherichia coli trp* Holo-and Aporepressor, **229**, 735–746.

Restriction and modification
DNA Recognition by the *Eco*K Methyltransferase. The Influence of DNA Methylation and the Cofactor *S*-adenosyl-L-methionine, **234**, 60–71.

Restriction endonuclease
Molecular Recognition Mediated by Bound Water. A Mechanism for Star Activity of the Restriction Endonuclease *Eco*RI, **234**, 302–306.

Restriction map
*Xba*I and *Bln*I Genomic Cleavage Maps of *Escherichia coli* K-12 Strain MG1655 and Comparative Analysis of Other Strains, **232**, 419–445.

Retinoic acid
Functional Expression of the Uncomplexed Serum Retinol-binding Protein in *Escherichia coli*. Ligand Binding and Reversible Unfolding Characteristics, **230**, 725–732.

Retinol
Crystallographic Studies on a Family of Cellular Lipophilic Transport Proteins. Refinement of P2 Myelin Protein and the Structure Determination and Refinement of Cellular Retinol-binding Protein in Complex with All-*trans*-retinol, **230**, 1225–1246.
Crystal Structures of Holo and Apo-cellular Retinol-binding Protein II, **230**, 1247–1259.

Retinol binding protein
Crystal Structure of the Trigonal Form of Human Plasma Retinol-binding Protein at 2·5 Å Resolution, **230**, 613–624.
Functional Expression of the Uncomplexed Serum Retinol-binding Protein in *Escherichia coli*. Ligand Binding and Reversible Unfolding Characteristics, **230**, 725–732.

Retinol-binding protein II
Crystal Structures of Holo and Apo-cellular Retinol-binding Protein II, **230**, 1247–1259.

Retrotransposon
A Cluster of Transposon-like Repetitive Sequences in Intron 7 of the Human Dystrophin Gene, **232**, 314–321.
Functional Dissection of Two Promoters that Control Sense and Antisense Transcription of *Drosophila melanogaster* F Elements, **234**, 988–997.

Retroviral proteinase
Crystallization and Preliminary X-ray Investigation of Recombinant Simian Immunodeficiency Virus Proteinase, **231**, 1139–1142.

Reverse transcriptase
DNA Deletion of Mitochondrial Introns is Correlated with the Process of Senescence in *Podospora anserina*, **234**, 1–7.

rhaBAD
A Regulatory Cascade in the Induction of *rhaBAD*, **234**, 87–98.

Rhamnose
A Regulatory Cascade in the Induction of *rhaBAD*, **234**, 87–98.

RhaS
A Regulatory Cascade in the Induction of *rhaBAD*, **234**, 87–98.

Rhinoviral
A Comparison of the Anti-rhinoviral Drug Binding Pocket in HRV14 and HRV1A, **230**, 206–227.

Rhizopus niveus
Preliminary Investigation of Crystals of Lipase I from *Rhizopus niveus*, **229**, 785–786.

Rhodobacter capsulatus
Porin Conformation in the Absence of Calcium. Refined Structure at 2·5 Å Resolution, **231**, 817–824.

Rhodobacter sphaeroides
New Crystal Form of the Photosynthetic Reaction Centre from *Rhodobacter sphaeroides* of Improved Diffraction Quality, **230**, 1311–1314.

Rhodospirillum rubrum
Two-dimensional Crystallization of the Light-harvesting Complex from *Rhodospirillum rubrum*, **231**, 501–504.

Rhodotorula graminis
Preliminary Crystallographic Study of D(—)-Mandelate Dehydrogenase from *Rhodotorula graminis*, **233**, 781–783.

Rhynchosciara
Molecular Characterization of the DNA Puff C-8 Gene of *Rhynchosciara americana*, **233**, 799–803.

Ribgrass mosaic virus
Preliminary X-ray Diffraction Studies of Ribgrass Mosaic Virus, **234**, 902–904.

Ribonuclease H
Crystal Structure of Ribonuclease H from *Thermus thermophilus* HB8 Refined at 2·8 Å Resolution, **230**, 529–542.

Ribonuclease inhibitor
Crystallization and Preliminary X-ray Analysis of Porcine Ribonuclease Inhibitor, a Protein with Leucine-rich Repeats, **231**, 137–140.
Crystallization of Porcine Liver Ribonuclease Inhibitor a Member of the Family of Leucine-rich Repeats Containing Proteins, **231**, 505–508.

Ribonuclease P
Suppression of Loss-of-function Mutations in *Escherichia coli* Ribonuclease P RNA (M1 RNA) by a Specific Base-pair Disruption, **230**, 11–14.

Ribonuclease T_1
Functional Interactions among the His40, Glu58 and His92 Catalysts of Ribonuclease T_1 as Studied by Double and Triple Mutants, **229**, 770–781.
Secondary Structure and Temperature-induced Unfolding and Refolding of Ribonuclease T_1 in Aqueous Solution. A Fourier Transform Infrared Spectroscopic Study, **232**, 967–981.

Ribonucleases nonspecific
Preliminary X-ray Crystallographic Studies of Ribonuclease I from *Escherichia coli*, **234**, 499–501.

Ribonucleoprotein
La Proteins from *Xenopus laevis*. cDNA Cloning and Developmental Expression, **231**, 196–204.

Ribonucleotide reductase
Structure and Function of the *Escherichia coli* Ribonucleotide Reductase Protein R2, **232**, 123–164.

Ribosomal assembly
Dynamics of *In Vitro* Assembly of 16 S rRNA into 30 S Ribosomal Subunits, **232**, 362–374.

Ribosome
On the Role of the P-site in Leftward Ribosome Frameshifting at a Hungry Codon, **230**, 1–5.

Crystals of Protein L30 from the 50 S Ribosomal Subunit of *Thermus thermophilus*. Preliminary Crystallographic Data, **230**, 1309–1310.
Dynamics of *In Vitro* Assembly of 16 S rRNA into 30 S Ribosomal Subunits, **232**, 362–374.
Analysis of the Chloroplast Large Subunit Ribosomal RNA Gene from 17 *Chlamydomonas* Taxa, **232**, 446–467.
Localization of Proteins HL29 and HL31 from *Haloarcula marismortui* within the 50 S Ribosomal Subunit by Chemical Crosslinking, **232**, 693–700.
RIP60 Dimers and Multiples of Dimers Assemble Link Structures at an Origin of Bidirectional Replication in the Dihydrofolate Reductase Amplicon of Chinese Hamster Ovary Cells, **232**, 766–778.
UGA Codon Context Which Spans Three Codons. Reversal by ms^2i^6A37 in tRNA, Mutation in *rpsD*(S4) or Streptomycin, **232**, 1017–1029.
Some Base Substitutions in the Leader of an *Escherichia coli* Ribosomal RNA Operon Affect the Structure and Function of Ribosomes. Evidence for a Transient Scaffold Function of the rRNA Leader, **233**, 203–218.
Two Inactive Fragments Derived from the Yeast Mitochondrial Ribosomal Protein MrpS28 Function *in Trans* to Support Ribosome Assembly and Respiratory Growth, **233**, 597–605.
Derivatives of the Yeast Mitochondrial Ribosomal Protein MrpS28 Replace Ribosomal Protein S15 as Functional Components of the *Escherichia coli* Ribosome, **233**, 606–614.
Translation Initiation Complex Formation with 30 S Ribosomal Particles Mutated at Conserved Positions in the 3′-Minor Domain of 16 S RNA, **234**, 14–27.
The Role of RNA Structure in Determining RNase E-dependent Cleavage Sites in the mRNA for Ribosomal Protein S20 *in vitro*, **234**, 998–1012.
Ribosomal Proteins L11 and L10.$(L12)_4$ and the Antibiotic Thiostrepton Interact with Overlapping Regions of the 23 S rRNA Backbone in the Ribosomal GTPase Centre, **234**, 1013–1020.
Crystallization of the Ribosome Inactivating Protein ML1 from *Viscum album* (Mistletoe) Complexed with β-D-Galactose, **234**, 1279–1281.

Ribosome assembly
Coupling of rRNA Transcription and Ribosomal Assembly *in Vivo*. Formation of Active Ribosomal Subunits in *Escherichia coli* Requires Transcription of rRNA Genes by Host RNA Polymerase which Cannot be Replaced by Bacteriophage T7 RNA Polymerase, **231**, 581–593.

Ribosome binding site
Dual Role of the Sequence-specific Bacteriophage T4 Endoribonuclease RegB. mRNA Inactivation and mRNA Destabilization, **233**, 429–446.

Ribosome inactivating proteins
Preliminary Crystallographic Studies of Crotin II, **234**, 908–909.

Ribosome inhibiting protein
The 2·5 Å Structure of Pokeweed Antiviral Protein, **233**, 705–715.

Ribosomes
Ribosome Initiation Complex Formation with the Pseudoknotted α Operon Messenger RNA, **229**, 609–622.
Some Base Substituticns in the Leader of an *Escherichia coli* Ribosomal RNA Operon Affect the Structure and Function of Ribosomes. Evidence for a Transient Scaffold Function of the rRNA Leader, **233**, 203–218.

Ribozyme
Requirements of a Group I Intron for Reactions at the 3′ Splice Site, **229**, 685–694.
Nucleotide Sequence Requirements for Self-cleavage of *Neurospora* VS RNA, **232**, 351–361.
The Conserved Terminal Guanosine of a Group I Intron can Help Prevent Reopening of the Ligated Exons, **232**, 375–385.
A Shortened Form of the *Tetrahymena thermophila* Group I Intron Can Catalyze the Complete Splicing Reaction *in trans*, **233**, 629–643.
Monitoring of the Cooperative Unfolding of the *sunY* Group I Intron of Bacteriophage T4. The Active form of the *sunY* Ribozyme is Stabilized by Multiple Interactions with 3′ Terminal Intron Components, **234**, 331–346.

L-ribulose-5-phosphate-4-epimerase
The Spatial Structure of the Class II L-Fuculose-1-phosphate Aldolase from *Escherichia coli*, **231**, 549–553.

Rice blast disease
Preliminary Crystallographic Studies on Scytalone Dehydratase from *Magnaporthe grisea*, **232**, 999–1002.

Rice seeds
Crystallization and Preliminary X-ray Crystallographic Analysis of Probable Amylase/Protease Inhibitor-B from Rice Seeds, **229**, 255–257.

Ricin homolog
The 2·5 Å Structure of Pokeweed Antiviral Protein, **233**, 705–715.

Rif^r mutants
Genetic Evidence for the Interaction between Cluster I and Cluster III Rifampicin Resistant Mutations, **231**, 1–5.

RNA
Requirements of a Group I Intron for Reactions at the 3′ Splice Site, **229**, 685–694.
Structural Studies of the Enveloped dsRNA Bacteriophage φ6 of *Pseudomonas syringae* by Raman Spectroscopy. II. Nucleocapsid Structure and Thermostability of the Virion, Nucleocapsid and Polymerase Complex, **230**, 473–482.
Crystal Structures of Ribonuclease F1 of *Fusarium moniliforme* in Its Free Form and in Complex with 2′GMP, **230**, 979–996.
Three-dimensional Structure of Satellite Tobacco Mosaic Virus at 2·9 Å Resolution, **231**, 375–391.
Nucleation of RNA Chain Formation by *Escherichia coli* DNA-dependent RNA Polymerase, **232**, 35–49.
An Efficient Procedure for Assignment of the Proton, Carbon and Nitrogen Resonances in $^{13}C/^{15}N$ Labeled Nucleic Acids, **232**, 1141–1156.
A Two-dimensional Model at the Nucleotide Level for the Central Hairpin of Coliphage Qβ RNA, **233**, 245–260.
Structural Analysis by Energy Dot Plot of a Large mRNA, **233**, 261–269.

RNA binding protein
Termination and Slippage by Bacteriophage T7 RNA Polymerase, **232**, 1030–1047.

RNA catalysis
The Conserved Terminal Guanosine of a Group I Intron can Help Prevent Reopening of the Ligated Exons, **232**, 375–385.
A Shortened Form of the *Tetrahymena thermophila* Group I Intron Can Catalyze the Complete Splicing Reaction *in trans*, **233**, 629–643.

RNA conformation
Ribosome Initiation Complex Formation with the Pseudoknotted α Operon Messenger RNA, **229**, 609–622.
Dynamics of *In Vitro* Assembly of 16 S rRNA into 30 S Ribosomal Subunits, **232**, 362–374.

RNA *de novo* synthesis
Template-directed and Template-free RNA Synthesis by Qβ Replicase, **231**, 175–179.

RNA defective-interfering
Structure of the Maize Mitochondrial Replicon RNA *b* and Its Relationship with Other Autonomously Replicating RNA Species, **230**, 757–765.

RNA DNA substrates
Pathway of Activation by Magnesium Ions of Substrates for the Catalytic Subunit of RNase P from *Escherichia coli*, **230**, 750–756.

RNA folding
Monitoring of the Cooperative Unfolding of the *sunY* Group I Intron of Bacteriophage T4. The Active form of the *sunY* Ribozyme is Stabilized by Multiple Interactions with 3′ Terminal Intron Components, **234**, 331–346.

RNA genetics
Structure of the Maize Mitochondrial Replicon RNA *b* and Its Relationship with Other Autonomously Replicating RNA Species, **230**, 757–765.

RNA hairpin
Modeling the Three-dimensional Structure of RNA Using Discrete Nucleotide Conformational Sets, **229**, 1049–1064.

RNA I
A Quantitative Model of ColE1 Plasmid Copy Number Control, **229**, 860–872.
Analysis of Establishment Phase Replication of the Plasmid ColE1, **230**, 137–150.

RNA II
A Quantitative Model of ColE1 Plasmid Copy Number Control, **229**, 860–872.

RNA modeling
Modeling the Three-dimensional Structure of RNA Using Discrete Nucleotide Conformational Sets, **229**, 1049–1064.

RNA peptide interaction
High Affinity Binding of TAR RNA by the Human Immunodeficiency Virus Type-1 *tat* Protein Requires Base-pairs in the RNA Stem and Amino Acid Residues Flanking the Basic Region, **230**, 90–110.

RNA phage
Different Mechanisms of Recognition of Bacteriophage Qβ Plus and Minus Strand RNAs by Qβ Replicase, **232**, 512–521.

RNA plasmids
Structure of the Maize Mitochondrial Replicon RNA *b* and Its Relationship with Other Autonomously Replicating RNA Species, **230**, 757–765.

RNA polymerase
Hierarchy of Base-pair Preference in the Binding Domain of the Bacteriophage T7 Promoter, **229**, 805–811.
Genetic Evidence for the Interaction between Cluster I and Cluster III Rifampicin Resistant Mutations, **231**, 1–5.
Transcriptional Slippage During the Transcription Initiation Process at a Mutant *lac* Promoter *in Vivo*, **231**, 569–580.
Nucleation of RNA Chain Formation by *Escherichia coli* DNA-dependent RNA Polymerase, **232**, 35–49.
Bacteriophage T7 RNA Polymerase. ^{19}F-Nuclear Magnetic Resonance Observations at 5-Fluorouracil-substituted Promoter DNA and RNA Transcript, **232**, 105–122.
The Minus 35-Recognition Region of *Escherichia coli* Sigma 70 is Inessential for Initiation of Transcription at an "Extended Minus 10" Promoter, **232**, 406–418.
Dissection of the *his* Leader Pause Site by Base Substitution Reveals a Multipartite Signal that Includes a Pause RNA Hairpin, **233**, 25–42.
Preliminary Crystallographic Studies on the D15 5′ to 3′ Exonuclease from Phage T5, **233**, 179–182.
A New Start Site for *Escherichia coli* RNA Polymerase at an Engineered Short Region of Non-complementarity in Double-stranded DNA, **233**, 349–358.

RNA polymerase III
The Function of Individual Zinc Fingers in Sequence-specific DNA Recognition by Transcription Factor IIIA, **233**, 567–579.
Promoter Strength and Structure Dictate Module Composition in RNA Polymerase III Transcriptional Activator Elements, **234**, 311–318.

RNA polymerase III (C)
Basal Promoter and Enhancer Element of Yeast U6 snRNA Gene, **233**, 644–658.

RNA polymerase III transcripts
La Proteins from *Xenopus laevis*. cDNA Cloning and Developmental Expression, **231**, 196–204.

RNA processing
Gene Organization, Primary Structure and RNA Processing Analysis of a Ribosomal RNA Operon in *Lactococcus lactis*, **230**, 57–76.
Structure of the Maltodextrin-uptake Locus of *Streptococcus pneumoniae*. Correlation to the *Escherichia coli* Maltose Regulon, **230**, 800–811.

RNA protein interaction
High Affinity Binding of TAR RNA by the Human Immunodeficiency Virus Type-1 *tat* Protein Requires Base-pairs in the RNA Stem and Amino Acid Residues Flanking the Basic Region, **230**, 90–110.
Hydrogen-bonding Contacts in the Major Groove are required for Human Immunodeficiency Virus Type-1 *tat* Protein Recognition of TAR RNA, **230**, 111–123.
The Influence of the Base-paired Flanking region on Structure and Function of the Ferritin mRNA Iron Regulatory Element, **231**, 230–240.
Clustered Arginine Residues of Bacteriophage λ N Protein are Essential to Antitermination of Transcription, but Their Locale Cannot Compensate for *boxB* Loop Defects, **231**, 343–360.
Ribosomal Proteins L11 and L10.$(L12)_4$ and the Antibiotic Thiostrepton Interact with Overlapping Regions of the 23 S rRNA Backbone in the Ribosomal GTPase Centre, **234**, 1013–1020.

RNA pseudoknot
Ribosome Initiation Complex Formation with the Pseudoknotted α Operon Messenger RNA, **229**, 609–622.

RNA recombination
Template-directed and Template-free RNA Synthesis by Qβ Replicase, **231**, 175–179.

RNA secondary structure
Co-existing Structures of an mRNA Stability Determinant. The 5′ Region of the *Escherichia coli* and *Serratia marcescens ompA* mRNA, **229**, 656–670.
Expression of Bacteriophage T4 Gene *25* is Regulated *via* RNA Secondary Structure in the Translational Initiation Region, **230**, 717–721.
Complementary Large Loops Determine the Rate of RNA Duplex Formation *in Vitro* in the Case of an Effective Antisense RNA Directed Against the Human Immunodeficiency Virus Type 1, **233**, 7–15.
Dissection of the *his* Leader Pause Site by Base Substitution Reveals a Multipartite Signal that Includes a Pause RNA Hairpin, **233**, 25–42.
Structural Analysis by Energy Dot Plot of a Large mRNA, **233**, 261–269.
The Role of RNA Structure in Determining RNase E-dependent Cleavage Sites in the mRNA for Ribosomal Protein S20 *in vitro*, **234**, 998–1012.

RNA self-replicating
Template-directed and Template-free RNA Synthesis by Qβ Replicase, **231**, 175–179.

RNA self-splicing
Requirements of a Group I Intron for Reactions at the 3′ Splice Site, **229**, 685–694.
Self-splicing of a *Podospora anserina* Group IIA Intron *in vitro*. Effects of 3′-Terminal Intron Alterations on Cleavage at the 5′ and 3′ Splice Site, **231**, 559–568.
Monitoring of the Cooperative Unfolding of the *sunY* Group I Intron of Bacteriophage T4. The Active form of the *sunY* Ribozyme is Stabilized by Multiple Interactions with 3′ Terminal Intron Components, **234**, 331–346.

RNA splicing
The Conserved Terminal Guanosine of a Group I Intron can Help Prevent Reopening of the Ligated Exons, **232**, 375–385.

A Shortened Form of the *Tetrahymena thermophila* Group I Intron Can Catalyze the Complete Splicing Reaction *in trans*, **233**, 629–643.
GAG Triplets as Splice Acceptors of Last Resort. An Unusual Form of Alternative Splicing in Prothymosin α Pre-mRNA, **234**, 281–288.

RNA strand exchange
Formation of a RuvAB-Holliday Junction Complex *in Vitro*, **232**, 397–405.
Two Mutant RecA Proteins Possessing pH-dependent Strand Exchange Activity Exhibit pH-dependent Presynaptic Filament Formation, **233**, 59–66.

RNA structure
Suppression of Loss-of-function Mutations in *Escherichia coli* Ribonuclease P RNA (M1 RNA) by a Specific Base-pair Disruption, **230**, 11–14.
Nucleotide Sequence Requirements for Self-cleavage of *Neurospora* VS RNA, **232**, 351–361.
A Two-dimensional Model at the Nucleotide Level for the Central Hairpin of Coliphage Qβ RNA, **233**, 245–260.

RNA structure translation
The Influence of the Base-paired Flanking region on Structure and Function of the Ferritin mRNA Iron Regulatory Element, **231**, 230–240.

RNA suboptimal structures
Co-existing Structures of an mRNA Stability Determinant. The 5′ Region of the *Escherichia coli* and *Serratia marcescens ompA* mRNA, **229**, 656–670.

RNA template recognition
Different Mechanisms of Recognition of Bacteriophage Qβ Plus and Minus Strand RNAs by Qβ Replicase, **232**, 512–521.

RNA template-free synthesis
Template-directed and Template-free RNA Synthesis by Qβ Replicase, **231**, 175–179.

RNA, tertiary interaction
Monitoring of the Cooperative Unfolding of the *sunY* Group I Intron of Bacteriophage T4. The Active form of the *sunY* Ribozyme is Stabilized by Multiple Interactions with 3′ Terminal Intron Components, **234**, 331–346.

RNA viruses
Structure of the Maize Mitochondrial Replicon RNA *b* and Its Relationship with Other Autonomously Replicating RNA Species, **230**, 757–765.

RNA-RNA interaction
Complementary Large Loops Determine the Rate of RNA Duplex Formation *in Vitro* in the Case of an Effective Antisense RNA Directed Against the Human Immunodeficiency Virus Type 1, **233**, 7–15.

RNase E
The Role of RNA Structure in Determining RNase E-dependent Cleavage Sites in the mRNA for Ribosomal Protein S20 *in vitro*, **234**, 998–1012.

RNase F1
Crystal Structures of Ribonuclease F1 of *Fusarium moniliforme* in Its Free Form and in Complex with 2′GMP, **230**, 979–996.

RNase H
Structure of a DNA:RNA Hybrid Duplex. Why RNase H Does Not Cleave Pure RNA, **233**, 509–523.

RNase P
Pathway of Activation by Magnesium Ions of Substrates for the Catalytic Subunit of RNase P from *Escherichia coli*, **230**, 750–756.
Identification of a Region within M1 RNA of *Escherichia coli* RNase P Important for the Location of the Cleavage Site on a Wild-type tRNA Precursor, **231**, 594–604.

Rom (Rop) protein
A Quantitative Model of ColE1 Plasmid Copy Number Control, **229**, 860–872.

Rotamer
Backbone-dependent Rotamer Library for Proteins. Application to Side-chain Prediction, **230**, 543–574.
Rotamers: To be or not to be? An Analysis of Amino Acid Side-chain Conformations in Globular Proteins, **230**, 592–612.

Rotation function
Crystallization and Preliminary Crystallographic Data for Formyltetrahydrofolate Synthetase from *Clostridium thermoaceticum*, **229**, 1153–1156.
Preliminary Crystallographic Study of 6-Phosphogluconate Dehydrogenase from *Trypanosoma brucei*, **233**, 317–321.

rRNA 23 S
Erythromycin Binding is Reduced in Ribosomes with Conformational Alterations in the 23 S rRNA Peptidyl Transferase Loop, **232**, 725–731.
Ribosomal Proteins L11 and L10.$(L12)_4$ and the Antibiotic Thiostrepton Interact with Overlapping Regions of the 23 S rRNA Backbone in the Ribosomal GTPase Centre, **234**, 1013–1020.

rRNA 5 S
The Function of Individual Zinc Fingers in Sequence-specific DNA Recognition by Transcription Factor IIIA, **233**, 567–579.

rRNA genes
Gene Organization, Primary Structure and RNA Processing Analysis of a Ribosomal RNA Operon in *Lactococcus lactis*, **230**, 57–76.

rRNA molecular scaffolds
Some Base Substitutions in the Leader of an *Escherichia coli* Ribosomal RNA Operon Affect the Structure and Function of Ribosomes. Evidence for a Transient Scaffold Function of the rRNA Leader, **233**, 203–218.

RUBISCO
Crystallization and X-ray Analysis of a Multienzyme Complex Containing RUBISCO and RuBP, **234**, 1274–1278.

Saccharomyces cerevisiae
Distortion of the DNA Double Helix by RAP1 at Silencers and Multiple Telomeric Binding Sites, **231**, 293–310.
Structural and Functional Requirements for the Chromatin Transition at the *PHO5* Promoter in *Saccharomyces cerevisiae* upon *PHO5* Activation, **231**, 658–667.
MSS1, a Nuclear-encoded Mitochondrial GTPase Involved in the Expression of COX1 Subunit of Cytochrome *c* Oxidase, **232**, 79–88.
Crystallization and Preliminary Crystallographic Characterization of Aspartic Proteinase-A from Baker's Yeast and Its Complexes with Inhibitors, **232**, 701–703.
A *Saccharomyces cerevisiae* Cyclophilin Resident in the Endoplasmic Reticulum, **233**, 183–188.
Yeast a1 and α2 Homeodomain Proteins Form a DNA-binding Activity with Properties Distinct from those of either Protein, **233**, 359–371.
The Gene Clusters ARC and COR on Chromosomes 5 and 10, Respectively, of *Saccharomyces cerevisiae* Share a Common Ancestry, **233**, 372–388.

Salivary glands
Dense Cluster of Genes is Located at the Ecdysone-regulated 3C Puff of *Drosophila melanogaster*, **231**, 531–538.
Molecular Characterization of the DNA Puff C-8 Gene of *Rhynchosciara americana*, **233**, 799–803.

Salmonella
Conformation of Complementarity Determining Region L1 Loop in Murine IgG λ Light Chain Extends the Repertoire of Canonical Forms, **229**, 597–601.

Salmonella typhimurium
Crystallization and Preliminary X-ray Data for the A-Isozyme of *O*-Acetylserine Sulfhydrylase from *Salmonella typhimurium*, **231**, 1130–1132.

Satellite tobacco mosaic virus
Three-dimensional Structure of Satellite Tobacco Mosaic Virus at 2·9 Å Resolution, **231**, 375–391.

Scanning transmission electron microscopy
Structure of the Herpes Simplex Virus Capsid. Molecular Composition of the Pentons and the Triplexes, **232**, 499–511.
RIP60 Dimers and Multiples of Dimers Assemble Link Structures at an Origin of Bidirectional Replication in the Dihydrofolate Reductase Amplicon of Chinese Hamster Ovary Cells, **232**, 766–778.

Scytalone dehydratase
Preliminary Crystallographic Studies on Scytalone Dehydratase from *Magnaporthe grisea*, **232**, 999–1002.

Secretory proteins
Two Secretory Protein Genes in *Chironomus tentans* Have Arisen by Gene Duplication and Exhibit Different Developmental Expression Patterns, **231**, 324–334.

Selenocysteine tRNA
Solution Structure of Selenocysteine-inserting $tRNA^{Sec}$ from *Escherichia coli*. Comparison with Canonical $tRNA^{Ser}$, **231**, 274–292.
Promoter Strength and Structure Dictate Module Composition in RNA Polymerase III Transcriptional Activator Elements, **234**, 311–318.

5′ sequences
The 5′ Flanking Sequences of the Mouse P-cadherin Gene, **231**, 935–941.

Serine hydroxymethyltransferase
Diffraction Grade Crystals of *Escherichia coli* Serine Hydroxymethyltransferase, **230**, 1094–1096.

Serine protease
Refined Structure of Sindbis Virus Core Protein and Comparison with Other Chymotrypsin-like Serine Proteinase Structures, **230**, 228–247.
Folding of Subtilisin BPN′: Role of the Pro-sequence, **233**, 293–304.
Affinity and Specificity of Serine Endopeptidase–Protein Inhibitor Interactions. Empirical Free Energy Calculations Based on X-ray Crystallographic Structures, **234**, 661–679.

Serine protease inhibitor
Solution Structure of a Variant of Human Pancreatic Secretory Trypsin Inhibitor Determined by Nuclear Magnetic Resonance Spectroscopy, **229**, 695–706.
Crystallization and Preliminary X-ray Crystallographic Analysis of the Protease Inhibitor Ecotin, **229**, 1157–1158.

Serine proteinases
Comparative Protein Modelling by Satisfaction of Spatial Restraints, **234**, 779–815.

Serpin
Crystallization and Preliminary X-ray Analysis of Human Antithrombin III, **229**, 249–250.
Crystal Structure of Cleaved Bovine Antithrombin III at 3·2 Å Resolution, **232**, 223–241.

Severing protein
Cloning of a Secretory Gelsolin from *Drosophila melanogaster*, **230**, 709–716.

Shiga toxin
Purification and Crystallization of Shiga Toxin from *Shigella dysenteriae*, **232**, 704–706.

Shigella dysenteriae
Purification and Crystallization of Shiga Toxin from *Shigella dysenteriae*, **232**, 704–706.

***Shigella* O-antigen**
Preliminary Crystallographic Analysis of a Fab Specific for the O-antigen of *Shigella flexneri* Cell Surface Lipopolysaccharide with and without Bound Saccharides, **231**, 133–136.

Sialic acid binding
Crystallographic Refinement and Structure Analysis of the Complex of Wheat Germ Agglutinin with a Bivalent Sialoglycopeptide from Glycophorin A, **232**, 620–638.

Sigma factor
The Minus 35-Recognition Region of *Escherichia coli* Sigma 70 is Inessential for Initiation of Transcription at an "Extended Minus 10" Promoter, **232**, 406–418.
A New Start Site for *Escherichia coli* RNA Polymerase at an Engineered Short Region of Non-complementarity in Double-stranded DNA, **233**, 349–358.

Signal peptide
On the Biosynthesis of Bovine Pancreatic Trypsin Inhibitor (BPTI). Structure, Processing, Folding and Disulphide Bond Formation of the Precursor *in Vitro* and in Microsomes, **232**, 1176–1196.

Signal transduction
Mutations that Affect Separate Functions of OmpR the Phosphorylated Regulator of Porin Transcription in *Escherichia coli*, **231**, 261–273.
Requirement of Both Kinase and Phosphatase Activities of an *Escherichia coli* Receptor (Tazl) for Ligand-dependent Signal Transduction, **231**, 335–342.
Ligand Binding to the Receptor Domain Regulates the Ratio of Kinase to Phosphatase Activities of the Signaling Domain of the Hybrid *Escherichia coli* Transmembrane Receptor, Taz1, **232**, 484–492.
Ligand Binding Induces an Asymmetrical Transmembrane Signal through a Receptor Dimer, **232**, 493–498.

Silencer
NeP1. A Ubiquitous Transcription Factor Synergizes with v-ERBA in Transcriptional Silencing, **232**, 747–755.

Silkmoth
Negative and Positive Regulators Modulate the Activity of a Silkmoth Chorion Gene during Choriogenesis, **230**, 151–160.

Simian immunodeficiency Virus
Crystallization and Preliminary X-ray Investigation of Recombinant Simian Immunodeficiency Virus Proteinase, **231**, 1139–1142.

Simian virus 40
Analysis of the Biased Distribution of Topoisomerase I Break Sites on Replicating Simian Virus 40 DNA, **231**, 6–18.

Sindbis virus
Refined Structure of Sindbis Virus Core Protein and Comparison with Other Chymotrypsin-like Serine Proteinase Structures, **230**, 228–247.

SIR phasing
Crystal Structure of Cleaved Bovine Antithrombin III at 3·2 Å Resolution, **232**, 223–241.

S-lac lectin
Crystallization and Preliminary X-ray Diffraction Analysis of the Human Dimeric S-Lac Lectin (L-14-II), **233**, 553–555.

S-layer
Distribution of Surface-exposed and Non-accessible Amino Acid Sequences among the Two Major Structural Domains of the S-layer Protein of *Aeromonas salmonicida*, **233**, 753–765.

Small angle X-ray scattering
Molten Globule of Cytochrome *c* Studied by Small Angle X-ray Scattering, **229**, 591–596.

Small enzymes
Preliminary Analysis of Crystals of 4-Oxalocrotonate Tautomerase, an Enzyme Composed of Unusually Small Monomers, **231**, 509–512.

Smooth muscle
Projection Image of Smooth Muscle α-Actinin from Two Dimensional Crystals Formed on Positively Charged Lipid Layers, **230**, 196–205.

SNAP-25
Structure of the Chicken Gene for SNAP-25 Reveals Duplicated Exons Encoding Distinct Isoforms of the Protein, **233**, 67–76.

SNF2 family
Prokaryotic Members of a New Family of Putative Helicases with Similarity to Transcription Activator SNF2, **230**, 684–688.

SOS response
An Imbalance of HU Synthesis Induces Mucoidy in *Escherichia coli*, **234**, 1021–1037.

SOS system
Spacing Requirements Between LexA Operator Half-sites can be Relaxed by Fusing the LexA DNA Binding Domain with some Alternative Dimerization Domains, **229**, 1–7.

Sox RS
Purification and Crystallization of Fumarase C from *Escherichia coli*, **231**, 141–144.

Soybean
Crystal Structure of Hydrophobic Protein from Soybean; a Member of a New Cysteine-rich Family, **231**, 877–887.
Crystallization and Preliminary X-ray Crystallographic Analysis of the Soybean Proglycinin Expressed in *Escherichia coli*, **233**, 177–178.

Spacers internal transcribed
Analysis of the Chloroplast Large Subunit Ribosomal RNA Gene from 17 *Chlamydomonas* Taxa, **232**, 446–467.

$NADP^+$-specificity
Crystallization of the NADP-dependent Glutamate Dehydrogenase from *Escherichia coli*, **234**, 1270–1273.

SPH motif
Promoter Strength and Structure Dictate Module Composition in RNA Polymerase III Transcriptional Activator Elements, **234**, 311–318.

Splicing alternative
Structure of the Chicken Gene for SNAP-25 Reveals Duplicated Exons Encoding Distinct Isoforms of the Protein, **233**, 67–76.

Splicing γ–γ' tertiary interaction
Self-splicing of a *Podospora anserina* Group IIA Intron *in vitro*. Effects of 3′-Terminal Intron Alterations on Cleavage at the 5′ and 3′ Splice Site, **231**, 559–568.

Splicing consensus rules
GAG Triplets as Splice Acceptors of Last Resort. An Unusual Form of Alternative Splicing in Prothymosin α Pre-mRNA, **234**, 281–288.

Sporulation
Cloning, DNA Sequence, Functional Analysis and Transcriptional Regulation of the Genes Encoding Dipicolinic Acid Synthetase Required for Sporulation in *Bacillus subtilis*, **232**, 468–483.

***spoVF* gene**
Cloning, DNA Sequence, Functional Analysis and Transcriptional Regulation of the Genes Encoding Dipicolinic Acid Synthetase Required for Sporulation in *Bacillus subtilis*, **232**, 468–483.

S-protein
Distribution of Surface-exposed and Non-accessible Amino Acid Sequences among the Two Major Structural Domains of the S-layer Protein of *Aeromonas salmonicida*, **233**, 753–765.

Squelching
Assembly of the Bacteriophage T4 Replication Machine Requires the Acidic Carboxy Terminus of Gene *32* Protein, **229**, 398–418.

Src homology domain
Predicted Secondary Structure for the Src Homology 3 Domain, **229**, 295–305.

Staphylococcal enterotoxin
Crystallization and Preliminary X-ray Analysis of a Microbial Superantigen Staphylococcal Enterotoxin C2, **233**, 170–172.

Staphylococcal nuclease
The Phase Transition between a Compact Denatured State and a Random Coil State in Staphylococcal Nuclease is First-Order, **232**, 718–724.

Starch
Isolation, Crystallization and Preliminary Diffraction Analyses of Human Pancreatic α-Amylase, **230**, 1084–1085.

Statistical mechanics
Configurational Distribution of Denatured Phosphoglycerate Kinase, **231**, 840–848.

Statistics
Significant Dispersed Recurrent DNA Sequences in the *Escherichia coli* Genome. Several New Groups, **229**, 833–848.

Steroid
Three-dimensional Structure of an Anti-steroid Fab′ and Progesterone-Fab′ Complex, **231**, 103–118.
Crystallization and Preliminary X-ray Diffraction Analysis of the Complex of Human Placental 17β-Hydroxysteroid Dehydrogenase with $NADP^+$, **234**, 242–244.

Streptavidin
Electron Microscopy Visualization of Oligonucleotide Binding to Duplex DNA *via* Triplex Formation, **230**, 379–383.
Three-dimensional Structure of the Tetragonal Crystal Form of Egg-white Avidin in its Functional Complex with Biotin at 2·7 Å Resolution, **231**, 698–710.

Streptococcus pneumoniae
Crystallization of a Genetically Engineered Water-soluble Primary Penicillin Target Enzyme. The High Molecular Mass PBP2x of *Streptococcus pneumoniae*, **232**, 1007–1009.

Streptomyces
Crystallization of a Chitosanase from *Streptomyces* N174, **232**, 995–996.

Streptomyces griseus
Crystallization and Preliminary Crystallographic Analysis of *Streptomyces griseus* Aminopeptidase, **230**, 342–344.

χ structure
Resolution of Synthetic χ Structures by the FLP Site-specific Recombinase, **234**, 522–533.

Structure-function
Function-based Mapping of the Yeast Mitochondrial ADP/ATP Translocator by Selection for Second Site Revertants, **230**, 1171–1182.
Comparison of a Structural and a Functional Epitope, **234**, 554–563.
Affinity Maturation of Human Growth Hormone by Monovalent Phage Display, **234**, 564–578.
Role of an Active Site Residue Analyzed by Combination of Mutagenesis and Coenzyme Analog, **234**, 1218–1229.

Subcomponent C1q
Thermodynamic Studies of the Collagen-like Region of Human Subcomponent C1q. A Water-containing Structural Model, **234**, 654–660.

Substrate
Pathway of Activation by Magnesium Ions of Substrates for the Catalytic Subunit of RNase P from *Escherichia coli*, **230**, 750–756.
Relocating a Negative Charge in the Binding Pocket of Trypsin, **230**, 934–949.
Identification of a Region within M1 RNA of *Escherichia coli* RNase P Important for the Location of the Cleavage Site on a Wild-type tRNA Precursor, **231**, 594–604.

Crystal Structure of Phospholipase C from *Bacillus cereus* Complexed with a Substrate Analog, **234**, 179–187.
Chimeric Human Cholinesterase. Identification of Inter Sites Responsible for Recognition of Acetyl-or Butyrylcholinesterase-specific Ligands, **234**, 289–296.
Crystallization and Preliminary X-ray Analysis of (1,3)- and (1,3; 1,4)-β-*d*-Glucanases from Germinating Barley, **234**, 888–889.
Evolution of Substrate Diversity in the Superfamily of Amino Acid Dehydrogenases. Prospects for Rational Chiral Synthesis, **234**, 938–945.
Conformational Flexibility in Glutamate Dehydrogenase. Role of Water in Substrate Recognition and Catalysis, **234**, 1131–1139.
Crystallization of the NADP-dependent Glutamate Dehydrogenase from *Escherichia coli*, **234**, 1270–1273.

Subtilisin
Long-Range Surface Charge–Charge Interactions in Proteins. Comparison of Experimental Results with Calculations from a Thoretical Method, **232**, 574–583.

Sulfate reducing bacteria
Structure Analysis of Cytochrome c_3 From *Desulfovibrio vulgaris* Hildenborough at 1·9 Å Resolution, **234**, 680–699.

Sulfolobus solfataricus
Crystallization and Preliminary X-ray Analysis of the β-Galactosidase from the Extreme Thermophilic Archaebacterium *Sulfolobus solfataricus*, **229**, 561–563.
Crystallization and Preliminary X-ray Analysis of an NAD^+-dependent Alcohol Dehydrogenase from the Extreme Thermophilic Archaebacterium *Sulfolobus solfataricus*, **229**, 782–784.

Superantigen
Crystallization and Preliminary X-ray Analysis of a Microbial Superantigen Staphylococcal Enterotoxin C2, **233**, 170–172.

Supercooling
A Model of the Three-dimensional Structure of Ice Nucleation Proteins, **232**, 709–717.

Suppression
Phenotypic Suppression by Incorporation of an Alien Amino Acid, **231**, 161–166.
Deficiency of 1-Methylguanosine in tRNA from *Salmonella typhimurium* Induces Frameshifting by Quadruplet Translocation, **232**, 756–765.
The 3′ Codon Context Effect on UAG Suppressor tRNA is Different in *Escherichia coli* and Human Cells, **233**, 1–6.
Suppression of Bacteriophage T7 ssb Mutation with Host ssb, **234**, 926–931.

Suppression allele-specific
Molecular Basis of Allosteric Activation of Bacterial L-Lactate Dehydrogenase, **230**, 21–27.
Protein-protein Interactions During Filamentous Phage Assembly, **231**, 689–697.
Crystallographic Binding Studies on the Allosteric Inhibitor Glucose-6-Phosphate to T State Glycogen Phosphorylase b, **232**, 253–267.
Human Deoxyhaemoglobin-2,3-Diphosphoglycerate Complex Low-Salt Structure at 2·5 Å Resolution, **233**, 270–274.
A Novel Allosteric Mechanism in Haemoglobin. Structure of Bovine Deoxyhaemoglobin, Absence of Specific Chloride-binding Sites and Origin of the Chloride-linked Bohr Effect in Bovine and Human Haemoglogin, **233**, 536–545.
Genetic Analysis of Periplasmic Binding Protein Dependent Transport in *Escherichia coli*. Each Lobe of Maltose-binding Protein Interacts with a Different Subunit of the $MalFGK_2$ Membrane Transport Complex, **233**, 659–670.

Suppressor
Suppression of Loss-of-function Mutations in *Escherichia coli* Ribonuclease P RNA (M1 RNA) by a Specific Base-pair Disruption, **230**, 11–14.

Suppressor *trpT*(Su9)
UGA Codon Context Which Spans Three Codons. Reversal by ms^2i^6A37 in tRNA, Mutation in *rpsD*(S4) or Streptomycin, **232**, 1017–1029.

Surface antigen
Refinement and Analysis of the Structure of the First Two Domains of Human CD4, **234**, 763–778.

Sweet protein
Two Crystal Structures of a Potently Sweet Protein. Natural Monellin at 2·75 Å Resolution and Single-Chain Monellin at 1·7 Å Resolution, **234**, 390–404.

***Synechocystis* sp. PCC 6803**
Molecular Cloning of a P-type ATPase Gene from the Cyanobacterium *Synechocystis* sp. PCC 6803. Homology to Eukaryotic Ca^{2+}-ATPases, **234**, 1284–1289.

Synergy
NeP1. A Ubiquitous Transcription Factor Synergizes with v-ERBA in Transcriptional Silencing, **232**, 747–755.

T7 Bacteriophage tRNA
Rules that Govern tRNA Identity in Protein Synthesis, **234**, 257–280.

Tar
Requirement of Both Kinase and Phosphatase Activities of an *Escherichia coli* Receptor (Taz1) for Ligand-dependent Signal Transduction, **231**, 335–342.
Ligand Binding Induces an Asymmetrical Transmembrane Signal through a Receptor Dimer, **232**, 493–498.

TAR RNA
Functional Sites in the 5′ Region of Human Immunodeficiency Virus Type 1 RNA Form Defined Structural Domains, **229**, 382–397.
Hydrogen-bonding Contacts in the Major Groove are required for Human Immunodeficiency Virus Type-1 *tat* Protein Recognition of TAR RNA, **230**, 111–123.

Tat
High Affinity Binding of TAR RNA by the Human Immunodeficiency Virus Type-1 *tat* Protein Requires Base-pairs in the RNA Stem and Amino Acid Residues Flanking the Basic Region, **230**, 90–110.
Hydrogen-bonding Contacts in the Major Groove are required for Human Immunodeficiency Virus Type-1 *tat* Protein Recognition of TAR RNA, **230**, 111–123.
HIV-1 Tat Overcomes Inefficient Transcriptional Elongation *in Vitro*, **232**, 732–746.
Synergism between Tat and VP16 in *Trans*-activation of HIV-1 LTR, **234**, 610–619.

4-oxalocrotonate tautomerase
Preliminary Analysis of Crystals of 4-Oxalocrotonate Tautomerase, an Enzyme Composed of Unusually Small Monomers, **231**, 509–512.

Tautomerism
Base-pair Induced Shifts in the Tautomeric Equilibrium of a Modified DNA Base, **230**, 6–10.

T-cell
Refinement and Analysis of the Structure of the First Two Domains of Human CD4, **234**, 763–778.

Telomere
Distortion of the DNA Double Helix by RAP1 at Silencers and Multiple Telomeric Binding Sites, **231**, 293–310.

Terminase
Function of IHF in λ DNA Packaging. II. Effects of Mutations Altering the IHF Binding Site and the Intrinsic Bend in *cosB* on λ Development, **230**, 505–515.
The Role of *cosB*, the Binding Site for Terminase, the DNA Packaging Enzyme of Bacteriophage λ, in the Nicking Reaction, **234**, 594–609.

Tetanus toxin
Crystallographic Characterization of Tetanus Toxin Fragment C, **230**, 673–674.

Tetrahydrofolate synthetase
Crystallization and Preliminary Crystallographic Data for Formyltetrahydrofolate Synthetase from *Clostridium thermoaceticum*, **229**, 1153–1156.

Tetrahymena
Requirements of a Group I Intron for Reactions at the 3′ Splice Site, **229**, 685–694.
Analysis of the Biased Distribution of Topoisomerase I Break Sites on Replicating Simian Virus 40 DNA, **231**, 6–18.
The Conserved Terminal Guanosine of a Group I Intron can Help Prevent Reopening of the Ligated Exons, **232**, 375–385.

***Tetrahymena* telomeric sequence**
Solution Structure of a Parallel-stranded G-Quadruplex DNA, **234**, 1171–1183.

Theiler's virus (GDVII) strain)
Crystallization and Preliminary X-ray Diffraction Studies of Theiler's Virus (GDVII strain), **231**, 1126–1129.

Thermoanaerobium brockii
Crystal Parameters of an Alcohol Dehydrogenase from the Extreme Thermophile *Thermoanaerobium brockii*, **230**, 353–355.

Thermoascus aurantiacus
Crystallization and Preliminary X-ray Diffraction Analysis of Crystals of *Thermoascus aurantiacus* Xylanase, **232**, 987–988.

Thermodynamics
Conformation and Thermodynamics of DNA "Necks". Models for Three-Arm Branch Formation in a Duplex, **230**, 766–778.
Sequence Dependence of the Free Energy of *B–Z* Junction Formation in Deoxyoligonucleotides, **231**, 475–488.
Are the Molten Globule and the Unfolded States of Apo-α-Lactalbumin Enthalpically Equivalent?, **232**, 5–8.
Contribution of Hydration to Protein Folding Thermodynamics. I. The Enthalpy of Hyderation, **232**, 639–659.
Thermodynamic Studies of the Collagen-like Region of Human Subcomponent C1q. A Water-containing Structural Model, **234**, 654–660.
The Free Energy, Enthalpy and Entropy of Native and of Partially Denatured Closed Circular DNA, **234**, 1184–1196.

Thermolysin
Refined 1·8 Å X-ray Crystal Structure of Astacin, a Zinc-endopeptidase from the Crayfish *Astacus astacus* L. Structure Determination, Refinement, Molecular Structure and Comparison with Thermolysin, **229**, 945–968.

Thermophile
Crystallization and Preliminary X-ray Analysis of the β-Galactosidase from the Extreme Thermophilic Archaebacterium *Sulfolobus solfataricus*, **229**, 561–563.
Crystallization and Preliminary X-ray Analysis of an NAD+-dependent Alcohol Dehydrogenase from the Extreme Thermophilic Archaebacterium *Sulfolobus solfataricus*, **229**, 782–784.

Thermophilic
Cloning and Overexpression of the Triosephosphate Isomerase Genes from Psychrophilic and Thermophilic Bacteria. Structural Comparison of the Predicted Protein Sequences, **229**, 85–93.
Crystal Parameters of an Alcohol Dehydrogenase from the Extreme Thermophile *Thermoanaerobium brockii*, **230**, 353–355.

Thermostability
Crystal Structure of Ribonuclease H from *Thermus thermophilus* HB8 Refined at 2·8 Å Resolution, **230**, 529–542.
Crystallization and Preliminary X-ray Diffraction Studies of *Bacillus stearothermophilus* Farnesyl Diphosphate Synthase Expressed in *Escherichia Coli*, **233**, 787–788.
Mapping the Stability Determinants of Bacterial Tyrosyl Transfer RNA Synthetases by an Experimental Evolutionary Approach, **234**, 209–221.
Refined Crystal Structure of the Seryl-tRNA Synthetase from *Thermus thermophilus* at 2·5 Å Resolution, **234**, 222–233.

Thermus thermophilus
Crystallization and Preliminary X-ray Diffraction Studies of a NADH Oxidase from *Thermus thermophilus* HB8, **230**, 1086–1088.
Crystals of Protein L30 from the 50 S Ribosomal Subunit of *Thermus thermophilus*. Preliminary Crystallographic Data, **230**, 1309–1310.
Purification, Crystallization and Preliminary X-ray Analysis of Inorganic Pyrophosphatase from *Thermus thermophilus*, **232**, 312–313.
Refined Crystal Structure of the Seryl-tRNA Synthetase from *Thermus thermophilus* at 2·5 Å Resolution, **234**, 222–233.

Thiol-disulphide exchange
Dissecting the Disulphide-coupled Folding Pathway of Bovine Pancreatic Trypsin Inhibitor. Forming the First Disulphide Bonds in Analogues of the Reduced Protein, **232**, 873–896.

Thioredoxin
How Consistent are Molecular Dynamics Simulations? Comparing Structure and Dynamics in Reduced and Oxidized *Escherichia coli* Thioredoxin, **233**, 766–780.

Thiostrepton
Coupling of rRNA Transcription and Ribosomal Assembly *in Vivo*. Formation of Active Ribosomal Subunits in *Escherichia coli* Requires Transcription of rRNA Genes by Host RNA Polymerase which Cannot be Replaced by Bacteriophage T7 RNA Polymerase, **231**, 581–593.
Ribosomal Proteins L11 and L10.(L12)4 and the Antibiotic Thiostrepton Interact with Overlapping Regions of the 23 S rRNA Backbone in the Ribosomal GTPase Centre, **234**, 1013–1020.

Thymidine phosphorylase
Crystallization and X-ray Diffraction Study of Recombinant Platelet-derived Endothelial Cell Growth Factor, **234**, 879–880.

Thymidylate synthase
Phenotypic Suppression by Incorporation of an Alien Amino Acid, **231**, 161–166.

Thyroid hormone receptor
NePl. A Ubiquitous Transcription Factor Synergizes with v-ERBA in Transcriptional Silencing, **232**, 747–755.

Tissue factor
Crystallization and Preliminary X-ray Analysis of Human Tissue Factor Extracellular Domain, **234**, 1263–1265.

Tissue specific expression
Molecular Cloning and Developmental Expression of the *Alpha-2* Tubulin Gene of *Caenorhabditis elegans*, **234**, 1290–1300.

Titration curves
On the pH Dependence of Protein Stability, **231**, 459–474.

Tn antigen
Crystallization and Preliminary Crystallographic Analysis of a Tetrameric Isolectin from *Vicia villosa*, Specific for the Tn Antigen, **230**, 670–672.

Tobacco mosaic virus
Preliminary X-ray Diffraction Studies of Ribgrass Mosaic Virus, **234**, 902–904.

Toeprint
Ribosome Initiation Complex Formation with the Pseudoknotted α Operon Messenger RNA, **229**, 609–622.
Translation Initiation Complex Formation with 30 S Ribosomal Particles Mutated at Conserved Positions in the 3′-Minor Domain of 16 S RNA, **234**, 14–27.

TOL
Identification of a *cis*-acting Sequence within the *Pm* Promoter of the TOL Plasmid which Confers XylS-mediated Responsiveness to Substituted Benzoates, **230**, 699–703.

Topoisomerase
Small Deletion and Insertion Mutations Induced by the Topoisomerase II Inhibitor Teniposide in CHO Cells and Comparison with Sites of Drug-stimulated DNA Cleavage *in Vitro*, **229**, 52–66.
Analysis of the Biased Distribution of Topoisomerase I Break Sites on Replicating Simian Virus 40 DNA, **231**, 6–18.
Purification, Circular Dichroism Analysis, Crystallization and Primary X-ray Diffraction Analysis of the F Plasmid CcdB Killer Protein, **231**, 513–515.
A Cluster of Strong Topoisomerase II Cleavage Sites is Located Near an Integrated Human Immunodeficiency Virus, **232**, 1060–1068.

Topoisomerase I
Analysis of the Biased Distribution of Topoisomerase I Break Sites on Replicating Simian Virus 40 DNA, **231**, 6–18.

Topology
The CUB Domain. A Widespread Module in Developmentally Regulated Proteins, **231**, 539–545.

Toxin
Crystallization and Preliminary X-ray Analysis of Vipoxin, a Complex between a Toxic Phospholipase A_2 and its Natural Polypeptide Inhibitor, **231**, 498–500.

Tranmembrane Ligand-binding
Influence of Fluctuations on DNA Curvature. A Comparison of Flexible and Static Wedge Models of Intrinsically, **232**, 530–554.

Transacetylase
Refined Crystal Structure of the Catalytic Domain of Dihydrolipoyl Transacetylase (E2p) from *Azotobacter vinelandii* at 2·6 Å Resolution, **230**, 1183–1199.

Transcription
Transcriptional Slippage During the Transcription Initiation Process at a Mutant *lac* Promoter *in Vivo*, **231**, 569–580.
Redox Regulation of *in Vitro* DNA-binding Activity by the Homeodomain of the Isl-1 Protein, **231**, 945–949.
Nucleation of RNA Chain Formation by *Escherichia coli* DNA-dependent RNA Polymerase, **232**, 35–49.
Bacteriophage T7 RNA Polymerase. ^{19}F-Nuclear Magnetic Resonance Observations at 5-Fluorouracil-substituted Promoter DNA and RNA Transcript, **232**, 105–122.
HIV-1 Tat Overcomes Inefficient Transcriptional Elongation *in Vitro*, **232**, 732–746.
Termination and Slippage by Bacteriophage T7 RNA Polymerase, **232**, 1030–1047.
Synergism between Tat and VP16 in *Trans*-activation of HIV-1 LTR, **234**, 610–619.

Transcription activation
Lrp, a Global Regulatory Protein of *Escherichia coli*, Binds Co-operatively to Multiple Sites and Activates Transcription of *ilvIH*, **229**, 306–318.
Zinc Finger Mutations that Alter Domain Interactions in the Glucocorticoid Receptor, **230**, 124–136.
AraC Protein Can Activate Transcription from Only One Position and When Pointed in Only One Direction, **231**, 205–218.
Mutations that Affect Separate Functions of OmpR the Phosphorylated Regulator of Porin Transcription in *Escherichia coli*, **231**, 261–273.
Glutamate at the Site of Phosphorylation of Nitrogen-regulatory Protein NTRC Mimics Aspartyl-Phosphate and Activates the Protein, **232**, 67–78.
Modulation of P_{RM} Activity by the Lambda P_R Promoter in Both the Presence and Absence of Repressor, **232**, 792–804.
Interactions of NodD at the *nod* Box: NodD Binds to Two Distinct Sites on the Same Face of the Helix and Induces a Bend in the DNA, **233**, 336–348.
Residues of the *Bacillus subtilis* phage Φ29 Transcriptional Activator Required Both to Interact with RNA Polymerase and to Activate Transcription, **233**, 695–704.
A Regulatory Cascade in the Induction of *rhaBAD*, **234**, 87–98.
Promoter Strength and Structure Dictate Module Composition in RNA Polymerase III Transcriptional Activator Elements, **234**, 311–318.

Transcription activator
GEBF-I activates the *Drosophila* Sgs3 gene enhancer by altering a positioned nucleosomal core particle, **234**, 319–330.

Transcription antitermination
Antitermination of Early Transcription in Phage HK022. Absence of a Phage-encoded Antitermination Factor, **229**, 368–381.
Genetic Evidence for the Interaction between Cluster I and Cluster III Rifampicin Resistant Mutations, **231**, 1–5.
Clustered Arginine Residues of Bacteriophage λ N Protein are Essential to Antitermination of Transcription, but Their Locale Cannot Compensate for *boxB* Loop Defects, **231**, 343–360.

Transcription complex
Dissection of the *his* Leader Pause Site by Base Substitution Reveals a Multipartite Signal that Includes a Pause RNA Hairpin, **233**, 25–42.

Transcription elongation
HIV-1 Tat Overcomes Inefficient Transcriptional Elongation *in Vitro*, **232**, 732–746.

Transcription factor III A
The Function of Individual Zinc Fingers in Sequence-specific DNA Recognition by Transcription Factor IIIA, **233**, 567–579.

Transcription factor III B
Basal Promoter and Enhancer Element of Yeast U6 snRNA Gene, **233**, 644–658.

Transcription factor III C
Basal Promoter and Enhancer Element of Yeast U6 snRNA Gene, **233**, 644–658.

Transcription factor IIIA
Dissection of the DNA-binding Domain of *Xenopus laevis* TFIIIA. Quantitative DNase I Footprinting Analysis of Specific Complexes between a 5 S RNA Gene Fragment and N-terminal Fragments of TFIIIA Containing Three, Four or Five Zinc-finger Domains, **233**, 191–202.

Transcription factors
Spacing Requirements Between LexA Operator Half-sites can be Relaxed by Fusing the LexA DNA Binding Domain with some Alternative Dimerization Domains, **229**, 1–7.
Plant bZIP Protein DNA Binding Specificity, **230**, 1131–1144.

Transcription initiation
Transcriptional Slippage During the Transcription Initiation Process at a Mutant *lac* Promoter *in Vivo*, **231**, 569–580.
Nucleation of RNA Chain Formation by *Escherichia coli* DNA-dependent RNA Polymerase, **232**, 35–49.
Modulation of P_{RM} Activity by the Lambda P_R Promoter in Both the Presence and Absence of Repressor, **232**, 792–804.

Transcription pausing
Dissection of the *his* Leader Pause Site by Base Substitution Reveals a Multipartite Signal that Includes a Pause RNA Hairpin, **233**, 25–42.

Transcription regulation
Negative and Positive Regulators Modulate the Activity of a Silkmoth Chorion Gene during Choriogenesis, **230**, 151–160.
Prokaryotic Members of a New Family of Putative Helicases with Similarity to Transcription Activator SNF2, **230**, 684–688.
Functional Dissection of Two Promoters that Control Sense and Antisense Transcription of *Drosophila melanogaster* F Elements, **234**, 988–997.
Determination of the Nuclear Magnetic Resonance Solution Structure of an *Antennapedia* Homeodomain–DNA Complex, **234**, 1084–1097.

Transcription repression
Yeast a1 and α2 Homeodomain Proteins Form a DNA-binding Activity with Properties Distinct from those of either Protein, **233**, 359–371.

Transcription start
The 5′ Flanking Sequences of the Mouse P-cadherin Gene, **231**, 935–941.
A New Start Site for *Escherichia coli* RNA Polymerase at an Engineered Short Region of Non-complementarity in Double-stranded DNA, **233**, 349–358.

Transcription termination
Antitermination of Early Transcription in Phage HK022. Absence of a Phage-encoded Antitermination Factor, **229**, 368–381.
Gene Organization, Primary Structure and RNA Processing Analysis of a Ribosomal RNA Operon in *Lactococcus lactis*, **230**, 57–76.
Genetic Evidence for the Interaction between Cluster I and Cluster III Rifampicin Resistant Mutations, **231**, 1–5.
Termination and Slippage by Bacteriophage T7 RNA Polymerase, **232**, 1030–1047.

Transcription terminator
Significant Dispersed Recurrent DNA Sequences in the *Escherichia coli* Genome. Several New Groups, **229**, 833–848.

Transferrin
Metal-induced Conformational Changes in Transferrins, **229**, 585–590.
Asp Ligand Provides the Trigger for Closure of Transferrin Molecules. Direct Evidence from X-ray Scattering Studies of Site-specific Mutants of the N-terminal Half-molecule of Human Transferrin, **231**, 554–558.

Transgenic
GEBF-I activates the *Drosophila* Sgs3 gene enhancer by altering a positioned nucleosomal core particle, **234**, 319–330.
Molecular Cloning and Developmental Expression of the *Alpha-2* Tubulin Gene of *Caenorhabditis elegans*, **234**, 1290–1300.

Transglycosylase
tRNA-Guanine Transglycosylase from *Escherichia coli*. Overexpression, Purification and Quaternary Structure, **231**, 489–497.

Transhydrogenase
Assembly of Multimeric Proteins. Effect of Mutations in the α-Subunit on Membrane Assembly and Activity of Pyridine Nucleotide Transhydrogenase, **234**, 8–13.

Translation
Functional Sites in the 5′ Region of Human Immunodeficiency Virus Type 1 RNA Form Defined Structural Domains, **229**, 382–397.
Ribosome Initiation Complex Formation with the Pseudoknotted α Operon Messenger RNA, **229**, 609–622.
On the Role of the P-site in Leftward Ribosome Frameshifting at a Hungry Codon, **230**, 1–5.
Release Factor-dependent False Stops are Infrequent in *Escherichia coli*, **230**, 41–50.
Symmetrical Interactions between the Translational Operator of the *thrS* Gene and Dimeric Threonyl Transfer RNA Synthetase, **230**, 704–708.
Undiscriminating Codon Reading with Adenosine in the Wobble Position, **230**, 739–749.
Deficiency of 1-Methylguanosine in tRNA from *Salmonella typhimurium* Induces Frameshifting by Quadruplet Translocation, **232**, 756–765.
UGA Codon Context Which Spans Three Codons. Reversal by ms^2i^6A37 in tRNA, Mutation in *rpsD*(S4) or Streptomycin, **232**, 1017–1029.
The 3′ Codon Context Effect on UAG Suppressor tRNA is Different in *Escherichia coli* and Human Cells, **233**, 1–6.
A Programmed Translational Frameshift is Required for the Synthesis of a Bacteriophage λ Tail Assembly Protein, **234**, 124–139.

Translation cell-free
Unassigned or Nonsense Codons in *Micrococcus luteus*, **230**, 51–56.

Translation false stop
Release Factor-dependent False Stops are Infrequent in *Escherichia coli*, **230**, 41–50.

Translation initiation
Expression of Bacteriophage T4 Gene *25* is Regulated *via* RNA Secondary Structure in the Translational Initiation Region, **230**, 717–721.
Synthesis of Proteins in *Escherichia coli* is Limited by the Concentration of Free Ribosomes. Expression from Reporter Genes does not always Reflect Functional mRNA Levels, **231**, 678–688.
Translation Initiation Complex Formation with 30 S Ribosomal Particles Mutated at Conserved Positions in the 3′-Minor Domain of 16 S RNA, **234**, 14–27.

Translational control
Translational Repression by the Bacteriophage T4 Gene *32* Protein Involves Specific Recognition of an RNA Pseudoknot Structure, **232**, 89–104.

Translocator, ADP/ATP
Site-directed Mutagenesis of the Yeast Mitochondrial ADP/ATP Translocator. Six Arginines and One Lysine are Essential, **230**, 1159–1170.
Function-based Mapping of the Yeast Mitochondrial ADP/ATP Translocator by Selection for Second Site Revertants, **230**, 1171–1182.

Translocon
Non-random Distribution of Amino Acids in the Transmembrane Segments of Human Type I Single Span Membrane Proteins, **229**, 602–608.

Transmembrane
Non-random Distribution of Amino Acids in the Transmembrane Segments of Human Type I Single Span Membrane Proteins, **229**, 602–608.
Refined Structures of the Ligand-binding Domain of the Aspartate Receptor from *Salmonella typhimurium*, **232**, 555–573.

Transport
Isolation and Sequencing of *Escherichia coli* Gene *proP* Reveals Unusual Structural Features of the Osmoregulatory Proline/Betaine Transporter, ProP, **229**, 268–276.
Expression of the Human Placental Folate Receptor Transcript is Regulated in Human Tissues. Organization and Full Nucleotide Sequence of the Gene, **229**, 1175–1183.
Crystallization and Preliminary X-ray Analysis of the Periplasmic Dipeptide Binding Protein from *Escherichia coli*, **231**, 145–147.

Transposon mercury resistance
Tn*5053*, a Mercury Resistance Transposon with Integron's Ends, **230**, 1103–1107.

Trans-splicing
Molecular Cloning and Developmental Expression of the *Alpha-2* Tubulin Gene of *Caenorhabditis elegans*, **234**, 1290–1300.

Transthyretin
Crystal Structure of the Trigonal Form of Human Plasma Retinol-binding Protein at 2·5 Å Resolution, **230**, 613–624.

Trichoderma
Crystallization and Preliminary X-ray Analysis of Two Major Xylanases from *Trichoderma reesei*, **233**, 313–316.

Trichoderma reesei
Crystallization of α-Galactosidase from *Trichoderma reesei*, **231**, 933–934.

***Trifolium repens* L.**
Crystallization and Preliminary Crystallographic Analysis of the Cyanogenic β-Glucosidase from the White Clover *Trifolium repens* L., **229**, 791–793.

Triosephosphate isomerase
Cloning and Overexpression of the Triosephosphate Isomerase Genes from Psychrophilic and Thermophilic Bacteria. Structural Comparison of the Predicted Protein Sequences, **229**, 85–93.

Tris
The Crystal Structure of Tris-inhibited Phospholipase C from *Bacillus cereus* at 1·9 Å Resolution. The Nature of the Metal Ion in Site 2, **231**, 870–876.

trmD
Deficiency of 1-Methylguanosine in tRNA from *Salmonella typhimurium* Induces Frameshifting by Quadruplet Translocation, **232**, 756–765.

tRNA
Critical Role of the Acceptor Stem of $tRNAs^{Met}$ in their Aminoacylation by *Escherichia coli* Methionyl-tRNA Synthetase, **229**, 26–36.
Growth-rate-dependent Accumulation of Twelve tRNA Species in *Escherichia coli*, **230**, 483–491.
Symmetrical Interactions between the Translational Operator of the *thrS* Gene and Dimeric Threonyl Transfer RNA Synthetase, **230**, 704–708.
Undiscriminating Codon Reading with Adenosine in the Wobble Position, **230**, 739–749.
Analysis of the Interactions of HIV1 Replication Primer $tRNA^{Lys,3}$ with Nucleocapsid Protein and Reverse Transcriptase, **231**, 185–190.
Recognition Nucleotides of *Escherichia coli* $tRNA^{Leu}$ and Its Elements Facilitating Discrimination from $tRNA^{Ser}$ and $tRNA^{Tyr}$, **231**, 219–229.
tRNA-Guanine Transglycosylase from *Escherichia coli*. Overexpression, Purification and Quaternary Structure, **231**, 489–497.
Identification of a Region within M1 RNA of *Escherichia coli* RNase P Important for the Location of the Cleavage Site on a Wild-type tRNA Precursor, **231**, 594–604.
Crystals of the Phenylalanyl-tRNA Synthetase from *Thermus thermophilus* HB8 Complexed with $tRNA^{Phe}$, **231**, 927–929.
Deficiency of 1-Methylguanosine in tRNA from *Salmonella typhimurium* Induces Frameshifting by Quadruplet Translocation, **232**, 756–765.
The 3′ Codon Context Effect on UAG Suppressor tRNA is Different in *Escherichia coli* and Human Cells, **233**, 1–6.
The Yeast Initiator $tRNA^{Met}$ can Act as an Elongator $tRNA^{Met}$ *In Vivo*, **233**, 43–58.
Two Acidic Residues of *Escherichia coli* Methionyl-tRNA Synthetase Act as Negative Discriminants Towards the Binding of Non-cognate tRNA Anticodons, **233**, 615–628.
Rules that Govern tRNA Identity in Protein Synthesis, **234**, 257–280.
Overproduction and Purification of Native and Queuine-lacking *Escherichia coli* $tRNA^{Asp}$. Role of the Wobble Base in $tRNA^{Asp}$ Acylation, **234**, 965–974.

tRNA acceptor stem
Critical Role of the Acceptor Stem of $tRNAs^{Met}$ in their Aminoacylation by *Escherichia coli* Methionyl-tRNA Synthetase, **229**, 26–36.

tRNA chimeric
Identification of a Region within M1 RNA of *Escherichia coli* RNase P Important for the Location of the Cleavage Site on a Wild-type tRNA Precursor, **231**, 594–604.

tRNA conformation
Solution Structure of Selenocysteine-inserting $tRNA^{Sec}$ from *Escherichia coli*. Comparison with Canonical $tRNA^{Ser}$, **231**, 274–292.

tRNA discrimination
Two Acidic Residues of *Escherichia coli* Methionyl-tRNA Synthetase Act as Negative Discriminants Towards the Binding of Non-cognate tRNA Anticodons, **233**, 615–628.

tRNA synthetase
Symmetrical Interactions between the Translational Operator of the *thrS* Gene and Dimeric Threonyl Transfer RNA Synthetase, **230**, 704–708.
Crystallization of *Bacillus subtilis* Tryptophanyl-tRNA Synthetase, **230**, 1089–1090.
Crystals of the Phenylalanyl-tRNA Synthetase from *Thermus thermophilus* HB8 Complexed with $tRNA^{Phe}$, **231**, 927–929.
Two Acidic Residues of *Escherichia coli* Methionyl-tRNA Synthetase Act as Negative Discriminants Towards the Binding of Non-cognate tRNA Anticodons, **233**, 615–628.

Tropomyosin
Calcium Ions and the Structure of Muscle Actin Filament. An X-ray Diffraction Study, **229**, 279–285.

Troponin
Calcium Ions and the Structure of Muscle Actin Filament. An X-ray Diffraction Study, **229**, 279–285.
Crossbridges in the Complete Unit Cell of Rigor Insect Flight Muscle Imaged by Three-dimensional Reconstruction from Oblique Sections, **233**, 86–108.

Trypanosoma brucei
Preliminary Crystallographic Study of 6-Phosphogluconate Dehydrogenase from *Trypanosoma brucei*, **233**, 317–321.

Trypanothione reductase
Trypanosoma cruzi Trypanothione Reductase. Crystallization, Unit Cell Dimensions and Structure Solution, **232**, 1217–1220.

Trypsin
Refined 1·6 Å Resolution Crystal Structure of the Complex Formed between Porcine β-Trypsin and MCTI-A, a Trypsin Inhibitor of the Squash Family. Detailed Comparison with Bovine β-Trypsin and Its Complex, **229**, 1022–1036.
Crystal Structures of Rat Anionic Trypsin Complexed with the Protein Inhibitors APPI and BPTI, **230**, 919–933.
Relocating a Negative Charge in the Binding Pocket of Trypsin, **230**, 934–949.
Crystallization and Preliminary X-ray Analysis of Papaya Mosaic Virus Coat Protein, **234**, 885–887.

Trypsin inhibitor
Refined 1·6 Å Resolution Crystal Structure of the Complex Formed between Porcine β-Trypsin and MCTI-A, a Trypsin Inhibitor of the Squash Family. Detailed Comparison with Bovine β-Trypsin and Its Complex, **229**, 1022–1036.

Tryptophan synthase α subunit
Further Examination of the Intermediate State in the Denaturation of the Tryptophan Synthase α Subunit. Evidence that the Equilibrium Denaturation Intermediate is a Molten Globule, **234**, 1197–1206.

Tubulin
Molecular Cloning and Developmental Expression of the *Alpha-2* Tubulin Gene of *Caenorhabditis elegans*, **234**, 1290–1300.

Tumour invasion
Crystallization and Preliminary X-ray Analysis of a Truncated Tissue Metalloproteinase Inhibitor $\Delta_{128\ 194}$ TIMP-2, **229**, 1163–1164.

Tumour necrosis factor
Crystallization and Preliminary Crystallographic Analysis of a TNF-β–55 kDa TNF Receptor Complex, **229**, 555–557.

Turkey ovomucoid inhibitor 3rd domain
Affinity and Specificity of Serine Endopeptidase–Protein Inhibitor Interactions. Empirical Free Energy Calculations Based on X-ray Crystallographic Structures, **234**, 661–679.

Two-dimensional crystals
Human Erythrocyte Band 3. Solubilization and Reconstitution into Two-dimensional crystals, **231**, 119–132.
Two-dimensional Crystallization of the Light-harvesting Complex from *Rhodospirillum rubrum*, **231**, 501–504.

Two-dimensional surface lattice
Keratin Intermediate Filament Structure. Crosslinking Studies Yield Quantitative Information on Molecular Dimensions and Mechanism of Assembly, **230**, 436–452.

Two-hybrid system
The Kin28 Protein Kinase is Associated with a Cyclin in *Saccharomyces cerevisiae*, **234**, 307–310.

Tyrosyl radical
Structure and Function of the *Escherichia coli* Ribonucleotide Reductase Protein R2, **232**, 123–164.

H_2-uptake
Nucleotide Sequence Analysis of Four Genes, *hupC*, *hupD*, *hupF* and *hupG*, Downstream of the Hydrogenase Structural Genes in *Bradyrhizobium japonicum*, **234**, 508–512.

Uracil-DNA glycosylase
Crystallization and Preliminary X-ray Analysis of the Uracil-DNA Glycosylase DNA Repair Enzyme from Herpes Simplex Virus Type 1, **234**, 910–912.

UvsX protein
DNA Conformation Induced by the Bacteriophage T4 UvsX Protein Appears Identical to the Conformation Induced by the *Escherichia coli* RecA Protein, **232**, 1–4.

Vasoconstrictor
Preliminary Crystallization and X-ray Analysis of Orthorhombic Human Endothelin, **234**, 1250–1252.

Venom
A Toxin that Recognizes Muscarinic Acetylcholine Receptors. Perparation and Characterization of Crystals Suitable for Structural Analysis, **232**, 997–998.

v-ERBA
NePI. A Ubiquitous Transcription Factor Synergizes with v-ERBA in Transcriptional Silencing, **232**, 747–755.

Vicia villosa
Crystallization and Preliminary Crystallographic Analysis of a Tetrameric Isolectin from *Vicia villosa*, Specific for the Tn Antigen, **230**, 670–672.

Villin
Cloning of a Secretory Gelsolin from *Drosophila melanogaster*, **230**, 709–716.

Vimentin
Separation and Characterization of Homo and Hetero-oligomers of the Intermediate Filament Proteins Desmin and Vimentin, **230**, 837–856.
Temperature-sensitive Intermediate Filament Assembly. Alternative Structures of *Xenopus laevis* Vimentin *in Vitro* and *in Vivo*, **234**, 99–113.

Vinculin
Molecular Shape of Vinculin in Aqueous Solution, **229**, 146–152.

Vipoxin
Crystals of Phospholipase A_2 Inhibitor. The Non-toxic Component of Vipoxin from the Venom of Bulgarian Viper (*Vipera ammodytes*), **229**, 1147–1149.

Virulent mutants
Highly Cooperative DNA Binding by the Coliphage HK022 Repressor, **230**, 1108–1130.

Virus
Structure of *Sesbania* Mosaic Virus at 4·7 Å Resolution and Partial Sequence of the Coat Protein, **229**, 20–25.
Role of DNA–Protein Interactions in Bacteriophage ΦX174 DNA Injection, **229**, 671–684.
Structural Studies of the Enveloped dsRNA Bacteriophage ϕ6 of *Pseudomonas syringae* by Raman Spectroscopy. II. Nucleocapsid Structure and Thermostability of the Virion, Nucleocapsid and Polymerase Complex, **230**, 473–482.
Three-dimensional Structure of Satellite Tobacco Mosaic Virus at 2·9 Å Resolution, **231**, 375–391.
Structural Transitions During Maturation of Bacteriophage Lambda Capsids, **233**, 682–694.
Crystallization and Preliminary X-ray Analysis of Papaya Mosaic Virus Coat Protein, **234**, 885–887.
Preliminary X-ray Diffraction Studies of Ribgrass Mosaic Virus, **234**, 902–904.

Virus assembly
The Canine Parvovirus Empty Capsid Structure, **233**, 231–244.
The Refined Structure of Bacteriophage MS2 at 2·8 Å Resolution, **234**, 620–639.

Virus capsid
Three-dimensional Transformation of Capsids Associated with Genome Packaging in a Bacterial Virus, **231**, 65–74.
Structure of the Herpes Simplex Virus Capsid. Molecular Composition of the Pentons and the Triplexes, **232**, 499–511.
Crystallization of Bacteriophage fr and its Recombinant Capsids, **232**, 1005–1006.
The Canine Parvovirus Empty Capsid Structure, **233**, 231–244.
Structural Transitions During Maturation of Bacteriophage Lambda Capsids, **233**, 682–694.

Virus coat protein
Crystallization and Preliminary X-ray Analysis of Papaya Mosaic Virus Coat Protein, **234**, 885–887.

Virus core protein
Refined Structure of Sindbis Virus Core Protein and Comparison with Other Chymotrypsin-like Serine Proteinase Structures, **230**, 228–247.

Virus icosahedra
Role of DNA–Protein Interactions in Bacteriophage ΦX174 DNA Injection, **229**, 671–684.

Virus individuality
Reversible Pressure Dissociation of R17 Bacteriophage. The Physical Individuality of Virus Particles, **231**, 999–1008.

Virus procapsid
Three-dimensional Transformation of Capsids Associated with Genome Packaging in a Bacterial Virus, **231**, 65–74.

Virus structure
Preliminary Crystallographic Analysis of Coxsackievirus A9, **230**, 667–669.

Structure Determination of Antiviral Compound SCH 38057 Complexed with Human Rhinovirus 14, **230**, 857–867.
Preliminary Crystallographic Analysis of Bovine Enterovirus, **231**, 930–932.
Crystallization and Preliminary X-ray Diffraction Studies of Theiler's Virus (GDVII strain), **231**, 1126–1129.

Virus three-dimensional
Structural Transitions During Maturation of Bacteriophage Lambda Capsids, **233**, 682–694.

Virus three-dimensional structure
Three-dimensional Transformation of Capsids Associated with Genome Packaging in a Bacterial Virus, **231**, 65–74.

Virus uncoating
Role of DNA–Protein Interactions in Bacteriophage ΦX174 DNA Injection, **229**, 671–684.

Viscum album
Crystallization of the Ribosome Inactivating Protein ML1 from *Viscum album* (Mistletoe) Complexed with β-D-Galactose, **234**, 1279–1281.

Vitamin A
Crystal Structure of the Trigonal Form of Human Plasma Retinol-binding Protein at 2·5 Å Resolution, **230**, 613–624.

VM-26
Small Deletion and Insertion Mutations Induced by the Topoisomerase II Inhibitor Teniposide in CHO Cells and Comparison with Sites of Drug-stimulated DNA Cleavage *in Vitro*, **229**, 52–66.

Vmw110
A Novel Arrangement of Zinc-binding Residues and Secondary Structure in the C_3HC_4 Motif of an Alpha Herpes Virus Protein Family, **234**, 1038–1047.

VP16
Synergism between Tat and VP16 in *Trans*-activation of HIV-1 LTR, **234**, 610–619.

Water molecules
Distribution of Solvent Molecules Around Apolar Side-chains in Protein Crystals, **231**, 392–414.

Water simulation
What is the Natural Boundary of a Protein in Solution?, **230**, 641–650.

Wheat germ agglutinin
Crystallization and Preliminary X-ray Diffraction Studies of Recombinant Barley Lectin and Pro-barley Lectin, **233**, 322–324.

White clover
Crystallization and Preliminary Crystallographic Analysis of the Cyanogenic β-Glucosidase from the White Clover *Trifolium repens* L., **229**, 791–793.

Xenopus
Evidence for a Clustered Genomic Organization of FAX-Zinc Finger Protein Encoding Transcription Units in *Xenopus laevis*, **230**, 400–412.
La Proteins from *Xenopus laevis*. cDNA Cloning and Developmental Expression, **231**, 196–204.
Dissection of the DNA-binding Domain of *Xenopus laevis* TFIIIA. Quantitative DNase I Footprinting Analysis of Specific Complexes between a 5 S RNA Gene Fragment and N-terminal Fragments of TFIIIA Containing Three, Four or Five Zinc-finger Domains, **233**, 191–202.
The Function of Individual Zinc Fingers in Sequence-specific DNA Recognition by Transcription Factor IIIA, **233**, 567–579.
Chimeric Human Cholinesterase. Identification of Inter Sites Responsible for Recognition of Acetyl-or Butyrylcholinesterase-specific Ligands, **234**, 289–296.

X-ray fiber diffraction
Refinement of the F-Actin Model against X-ray Fiber Diffraction Data by the Use of a Directed Mutation Algorithm, **234**, 826–836.

X-ray solution scattering
Metal-induced Conformational Changes in Transferrins, **229**, 585–590.
Asp Ligand Provides the Trigger for Closure of Transferrin Molecules. Direct Evidence from X-ray Scattering Studies of Site-specific Mutants of the N-terminal Half-molecule of Human Transferrin, **231**, 554–558.

Xylanase
Crystallization and Preliminary X-ray Analysis of the Catalytic Domain of Xylanase A from *Pseudomonas fluorescens* subspecies *cellulosa*, **229**, 246–248.
Crystals of β-Xylanase from *Aspergillus oryzae*, **230**, 661–663.
Crystallization and Preliminary X-ray Analysis of a Thermophillic *Bacillus* Xylanase, **230**, 664–666.
Crystallization and Preliminary X-ray Diffraction Analysis of Crystals of *Thermoascus aurantiacus* Xylanase, **232**, 987–988.
Crystallization and Preliminary X-ray Analysis of Two Major Xylanases from *Trichoderma reesei*, **233**, 313–316.

XylS
Identification of a *cis*-acting Sequence within the *Pm* Promoter of the TOL Plasmid which Confers XylS-mediated Responsiveness to Substituted Benzoates, **230**, 699–703.

YACs
Structure of the Sequences Adjacent to the Centromeric Alphoid Satellite DNA Array on the Human Y Chromosome, **230**, 787–799.

Yeast
Nuclear Control of the Messenger RNA Expression for Mitochondrial ATPase Subunit 9 in a New Yeast Mutant, **229**, 909–916.
Site-directed Mutagenesis of the Yeast Mitochondrial ADP/ATP Translocator. Six Arginines and One Lysine are Essential, **230**, 1159–1170.
Function-based Mapping of the Yeast Mitochondrial ADP/ATP Translocator by Selection for Second Site Revertants, **230**, 1171–1182.

Yeast transcription factor
Crystallographic Characterization of a PH04–DNA Complex, **229**, 566–569.

Z-DNA
Multiple Transitions to Non-B-DNA Structures Occur in the Distal Regulatory Region of the Rat Prolactin Gene, **229**, 344–367.
Sequence Dependence of the Free Energy of *B–Z* Junction Formation in Deoxyoligonucleotides, **231**, 475–488.

Zeptomole
Turnover of Fluorescent Nucleoside Triphosphates by Isolated Immobilized Myosin Filaments, **234**, 114–123.

Zinc
Refined 1·8 Å X-ray Crystal Structure of Astacin, a Zinc-endopeptidase from the Crayfish *Astacus astacus* L. Structure Determination, Refinement, Molecular Structure and Comparison with Thermolysin, **229**, 945–968.
Characterization of the Zinc-induced Structural Transition to *H-DNA at a $d(GA{\cdot}CT)_{22}$ Sequence, **230**, 966–978.
Methionyl-tRNA Synthetase Zinc Binding Domain. Three-dimensional Structure and Homology with Rubredoxin and *gag* Retroviral Proteins, **231**, 1078–1089.

Crystal Structure of the Complex between Human Carbonic Anhydrase II and the Aromatic Inhibitor 1,2,4-Triazole, **232**, 9–14.

Zinc finger

Conformational and Nucleic Acid Binding Studies on the Synthetic Nucleocapsid Protein of HIV-1, **229**, 94–104.

Zinc Finger Mutations that Alter Domain Interactions in the Glucocorticoid Receptor, **230**, 124–136.

Evidence for a Clustered Genomic Organization of FAX-Zinc Finger Protein Encoding Transcription Units in *Xenopus laevis*, **230**, 400–412.

Dissection of the DNA-binding Domain of *Xenopus laevis* TFIIIA. Quantitative DNase I Footprinting Analysis of Specific Complexes between a 5 S RNA Gene Fragment and N-terminal Fragments of TFIIIA Containing Three, Four or Five Zinc-finger Domains, **233**, 191–202.

The Function of Individual Zinc Fingers in Sequence-specific DNA Recognition by Transcription Factor IIIA, **233**, 567–579.

A Novel Arrangement of Zinc-binding Residues and Secondary Structure in the C_3HC_4 Motif of an Alpha Herpes Virus Protein Family, **234**, 1038–1047.
